100% Pass 2026 Efficient Splunk SPLK-1004: Latest Splunk Core Certified Advanced Power User Practice Questions

Using SPLK-1004 exam prep is an important step for you to improve your soft power. I hope that you can spend a little time understanding what our study materials have to attract customers compared to other products in the industry. SPLK-1004 exam dumps have a higher pass rate than products in the same industry. If you want to pass SPLK-1004 Certification, then it is necessary to choose a product with a high pass rate. Our study materials guarantee the pass rate from professional knowledge, services, and flexible plan settings. According to user needs, SPLK-1004 exam prep provides everything possible to ensure their success.

Splunk Core Certified Advanced Power User Sample Questions (Q78-Q83):

NEW QUESTION # 78
If a search contains a subsearch, what is the order of execution?

- A. The order of execution depends on whether either search uses a stats command.
- B. The inner search executes first.
- C. The two searches are executed in parallel.
- D. The outer search executes first.

Answer: B

Explanation:
In a Splunk search containing a subsearch, the inner subsearch executes first. The result of the subsearch is then passed to the outer search, which often depends on the results of the inner subsearch to complete its execution.

NEW QUESTION # 79

Which of the following is true about the preview feature and macros?

- A. The preview feature can be launched by right-clicking on the macro name in the search string.
- B. The preview feature expands all macros within the search, including nested macros.
- C. The preview feature can be launched using Tab-Shift-E on Mac or Windows.
- D. The preview feature expands only the selected macro within the search.

Answer: B

Explanation:
Comprehensive and Detailed Step by Step Explanation:
Thepreview featurein Splunk expandsall macroswithin a search, including anynested macros, to show their full definitions. This allows users to review the complete structure of the search query after all macros have been resolved.
Here's why this works:
* Macro Expansion: Macros are placeholders for reusable search logic. When the preview feature is used, Splunk replaces all macro references with their corresponding definitions, including those nested within other macros.
* Full Visibility: Expanding all macros ensures that users can see the entire search logic, which is especially helpful for debugging or understanding complex queries.
Other options explained:
* Option A: Incorrect because the preview feature expands all macros, not just the selected one.
* Option B: Incorrect because the keyboard shortcutTab-Shift-Eis not valid for launching the preview feature.
* Option C: Incorrect because right-clicking on a macro name does not launch the preview feature; it is typically accessed through the Splunk UI or specific commands.

NEW QUESTION # 80

Which of the following could be used to build a contextual drilldown?

- A. <set>and<offset>elements withdependsandrejectsattributes.
- B. <set>and<reset>elements with arejectsattribute.
- C. $earliest$and$latest$tokens set by a global time range picker.
- D. <set>and<unset>elements with adepend?attribute.

Answer: D

Explanation:
Comprehensive and Detailed Step by Step Explanation:
To build acontextual drilldownin Splunk dashboards, you can use<set>and<unset>elements with adepend?
attribute. These elements allow you to dynamically update tokens based on user interactions, enabling context- sensitive behavior in your dashboard.
Here's why this works:
* Contextual Drilldown: A contextual drilldown allows users to click on a visualization (e.g., a chart or table) and navigate to another view or filter data based on the clicked value.
* Dynamic Tokens: The<set>element sets a token to a specific value when a condition is met, while< unset>clears the token when the condition is no longer valid. Thedepend?attribute ensures that the behavior is conditional and context-aware.

Example:
<drilldown>
<set token="selected_product">$click.value$</set>
<unset token="selected_product" depend="?"></unset>
</drilldown>
In this example:
* When a user clicks on a value, theselected_producttoken is set to the clicked value ($click.value$).
* If the condition specified independ?is no longer true, the token is cleared using<unset>.
Other options explained:
* Option B: Incorrect because$earliest$and$latest$tokens are related to time range pickers, not contextual drilldowns.
* Option C: Incorrect because<reset>is not a valid element in Splunk XML, andrejectsis unrelated to drilldown behavior.
* Option D: Incorrect because<offset>is not used for building drilldowns, anddepends/rejectsdo not apply in this context.

NEW QUESTION # 81
Which of the following would exclude all entries contained in the lookup file baditems.csv from search results?

- A. [NOT inputlookup baditems.csv]
- B. NOT (lookup baditems.csv OUTPUT item)
- C. NOT [inputlookup baditems.csv]
- D. WHERE item NOT IN (baditems.csv)

Answer: C

Explanation:
The correct way to exclude entries from the lookup file baditems.csv is using NOT [inputlookup baditems.csv]. This syntax excludes all entries in the lookup from the main search results.

NEW QUESTION # 82
Which SPL command converts the hour into a user's local time based upon the user's time zone preference setting?

- A. local_time(_time, "%H")
- B. relative_time(_time, "%H")
- C. time(_time, "%H")
- D. strftime(_time, "%H")

Answer: D

Explanation:
The strftime function in Splunk is used to format timestamps into human-readable strings. When you use strftime(_time, "%H"), it converts the _time field into the hour (00 to 23) based on the user's time zone preference setting.
Splunk stores all timestamps in Coordinated Universal Time (UTC). However, when displaying time, it adjusts according to the user's time zone preference set in their profile. Therefore, using strftime will reflect the local time for the user.
