CIS-HAM Valid Exam Discount | Handy for Certified Implementation Specialist - Hardware Asset Management

Our ServiceNow CIS-HAM study guide in order to allow the user to form a complete system of knowledge structure, the qualification examination of test interpretation and supporting course practice organic reasonable arrangement together, the CIS-HAM simulating materials let the user after learning the section, and each section between cohesion and is closely linked, for users who use the Certified Implementation Specialist - Hardware Asset Management CIS-HAM training quiz to build a knowledge of logical framework to create a good condition.

ServiceNow Certified Implementation Specialist - Hardware Asset Management Sample Questions (Q122-Q127):

NEW QUESTION # 122

To perform hardware model normalization, which three fields from the hardware model record are used to set the normalized display name?

- A. Asset tracking unit, Manufacturer, Model number
- B. Asset tracking unit, Manufacturer, Model category
- C. Name, Asset tracking unit, Model number
- D. Name, Device type, Model category
- E. Name, Manufacturer, Model number

Answer: E

Explanation:

To perform hardware model normalization, you need to use the Hardware Model Normalization Content Service, which is a data service that provides standardized information about hardware models from various manufacturers. You can access this service from the Hardware Model Normalization module under Asset Management. To set the normalized display name for a hardware model, you need to use the following three fields from the hardware model record:

Name: This is the name of the hardware model as it appears in the model catalog or the CMDB. For example, "iPhone 12 Pro".

Manufacturer: This is the name of the manufacturer of the hardware model. For example, "Apple".

Model number: This is the unique identifier of the hardware model assigned by the manufacturer. For example, "A2341".

The normalized display name is a combination of these three fields, separated by commas. For example, "iPhone 12 Pro, Apple, A2341". The normalized display name helps you to easily identify and compare hardware models across different sources and platforms. NEW QUESTION # 123

For a model to be fully normalized, what must be added to the model record?

- A. Manufacturer
- B. Owner
- C. Model number
- D. Version

Answer: C

Explanation:

Explanation

To fully normalize a model, you need to add the model number to the model record, which is a unique identifier for the model based on the United Nations Standard Product and Services Code (UNSPSC). The model number helps to standardize the display name and remove duplicates in the model catalog and the CMDB. The other fields, such as version, owner, and manufacturer, are optional or can be derived from the model number. References:

Hardware Model Normalization, which explains how to normalize the details of the hardware and consumable models using the Hardware Model Normalization Content Service.

Hardware Asset Management overview, which describes the functionalities of the Hardware Asset Management application, including the model normalization feature.

[Hardware Asset Management - Customer Success], which provides a success map that outlines the processes and best practices for implementing, running, and optimizing the Hardware Asset Management applications, based on the Capability Blueprint framework.

NEW QUESTION # 124

A user's broken laptop is replaced via an incident. Upon completion, the Incident Management application triggers the swap/replace asset task. Which fields are automatically updated in the associated asset record?
(Choose three.)

- A. Maintenance contracts
- B. Depreciation values
- C. Disposal information
- D. Related CI record
- E. Software allocations

Answer: C,D,E

Explanation:

Explanation

According to the ServiceNow Hardware Asset Management documentation, a swap/replace asset task is a type of asset task that is used to replace a faulty or damaged asset with a new or refurbished one¹. When an incident is resolved by swapping or replacing an asset, the Incident Management application triggers a swap/replace asset task and assigns it to the asset manager². When the asset manager completes the task, the following fields are automatically updated in the associated asset record³:

Software allocations: The software allocations of the old asset are transferred to the new asset, and the old asset is marked as unallocated.

Related CI record: The related configuration item (CI) record of the old asset is updated with the new asset information, and the old asset is marked as retired.

Disposal information: The disposal information of the old asset is updated with the reason, date, and method of disposal.

The other options, maintenance contracts and depreciation values, are not automatically updated in the associated asset record when a swap/replace asset task is triggered. Maintenance contracts are not affected by the swap/replace operation, as they are linked to the asset model, not the individual asset⁴. Depreciation values are not updated automatically, as they are calculated based on the asset cost, depreciation method, and depreciation schedule⁵. References:

NEW QUESTION # 125

What is the name of the scheduled job that generates expense lines based on rate cards?

- A. Process Expense Allocations
- B. Process Daily Allocations
- C. Process Daily Costs
- D. Process FM Costs

Answer: D

NEW QUESTION # 126

When should you retire an IT asset?

- A. At any point it is recommended by the HAM-defined asset disposal procedure
- B. When the Hardware Content Service Lifecycle data reports the asset is nearing end-of-service
- C. At any point it is recommended by the HAM-defined asset policy
- D. At any point that it is recommended by your company-defined policies and procedures
- E. When the Hardware Content Service Lifecycle data reports the asset is nearing end-of-life

Answer: D

Explanation:

The retirement of an IT asset is the final stage of the hardware asset lifecycle, where the asset is removed from service and disposed of in a secure and compliant manner¹.

The retirement of an IT asset should be done according to the company-defined policies and procedures, which may vary depending

on the type, condition, and value of the asset, as well as the business needs and regulatory requirements¹.

The company-defined policies and procedures should specify the criteria, process, and documentation for retiring an IT asset, such as the following¹:

The trigger events or conditions that indicate the need for retirement, such as end-of-life, end-of-service, end-of-warranty, obsolescence, damage, theft, or loss
The approval workflow and roles involved in the retirement decision, such as the asset manager, the asset owner, the finance department, and the security department
The disposal methods and vendors available for the retirement, such as recycling, reselling, donating, or destroying
The certificate of destruction or disposal that verifies the secure and compliant disposal of the asset by the vendor
The update of the asset record and the configuration management database (CMDB) to reflect the retirement status and date of the asset
Therefore, the answer that reflects the company-defined policies and procedures is B. At any point that it is recommended by your company-defined policies and procedures.

The other options are not the correct answer because they are either too vague or too specific:

A) At any point it is recommended by the HAM-defined asset policy: This is too vague, as the HAM-defined asset policy may not cover all the aspects and scenarios of the retirement process. The HAM-defined asset policy is a general guideline that defines the objectives, scope, roles, and responsibilities of hardware asset management². It does not necessarily provide the detailed criteria, process, and documentation for retiring an IT asset.

C) At any point it is recommended by the HAM-defined asset disposal procedure: This is too specific, as the HAM-defined asset disposal procedure is only one part of the retirement process. The HAM-defined asset disposal procedure is a step-by-step instruction that describes how to dispose of an IT asset through a vendor³. It does not necessarily cover the trigger events, approval workflow, and record update for retiring an IT asset.

D) When the Hardware Content Service Lifecycle data reports the asset is nearing end-of-service: This is too specific, as the Hardware Content Service Lifecycle data is only one possible source of information for the retirement decision. The Hardware Content Service Lifecycle data is a subscription-based service that provides the end-of-life, end-of-service, and end-of-support dates for hardware models⁴. It does not necessarily reflect the actual condition, value, and usage of the individual IT asset.

E) When the Hardware Content Service Lifecycle data reports the asset is nearing end-of-life: This is also too specific, for the same reasons as option D. Reference:

1: Hardware Asset Retirement

2: Hardware Asset Policy

3: Hardware Asset Disposal

4: Hardware Content Service Lifecycle

NEW QUESTION # 127

.....

TestKingFree guarantee the best valid and high quality ServiceNow study guide which you won't find any better one available. CIS-HAM training pdf will be the right study reference if you want to be 100% sure pass and get satisfying results. From our CIS-HAM free demo which allows you free download, you can see the validity of the questions and format of the CIS-HAM actual test. In addition, the price of the CIS-HAM dumps pdf is reasonable and affordable for all of you.
