We guarantee that you will be able to ace the C_SIGDA_2403 examination on the first attempt by studying with our actual C_SIGDA_2403 exam questions.

SAP Certified Associate - Process Data Analyst - SAP Signavio Sample Questions (Q51-Q56):

NEW QUESTION # 51

What is the heart of the SAP Signavio Process Transformation Suite?

- A. SAP Signavio Process Manager
- B. SAP Signavio Process Governance
- C. SAP Signavio Process Intelligence
- D. SAP Signavio Process Collaboration Hub

Answer: D

NEW QUESTION # 52

What is the benefit of using Attribute Visualization Layers?Note: There are 2 correct answers to this question.

- A. Display attributes directly on the diagram canvas.
- B. Display attributes in different colors based on their values.
- C. Display attributes categories above a task.
- D. Display attributes of the linked dictionary term.

Answer: A,B

NEW QUESTION # 53

What is a core capability of the transaction code analysis?

- A. It can show the average ways processes are executed in a particular company code
- B. It can show the various ways processes are executed in reality across the entire organization
- C. It can check the number of transaction codes used on average for each process step and by company code
- D. It can check the number of transaction codes used on average for one end-to-end process

Answer: C

Explanation:

Transaction code analysis in SAP Signavio Process Intelligence examines the usage of transaction codes in SAP systems to understand process execution. The documentation details:

* Exact Extract:"Transaction code analysis provides insights into the number of transaction codes used on average for each process step, segmented by company code, to identify variations in process execution across organizational units." (SAP Signavio Process Intelligence User Guide, section on "Transaction Code Analysis").

* Explanation:

* Option B (It can check the number of transaction codes used on average for each process step and by company code):This is correct as transaction code analysis breaks down the usage of SAP transaction codes (e.g., VA01 for sales order creation) per process step and company code, highlighting differences in how processes are executed.

* Option A (It can check the number of transaction codes used on average for one end-to-end process)is incorrect as the analysis focuses on individual steps, not the entire process.

* Option C (It can show the various ways processes are executed in reality across the entire organization)is incorrect because this is a function of Process Discovery or Variant Explorer, not transaction code analysis.

* Option D (It can show the average ways processes are executed in a particular company code)is incorrect as it describes process variants, not transaction code usage.
