Google Cloud Digital Leader certification is recognized globally and is highly respected in the industry. It is an excellent way to showcase your skills and knowledge to potential employers and clients.

Google Cloud Digital Leader Sample Questions (Q16-Q21):

NEW QUESTION # 16
Your organization needs to restrict access to a Cloud Storage bucket. Only employees who are based in Canada should be allowed to view the contents.
What is the most effective and efficient way to satisfy this requirement?

- A. Give each employee who is based in Canada access to the bucket
- B. Create a group consisting of all Canada-based employees, and give the group access to the bucket
- C. Configure Google Cloud Armor to allow access to the bucket only from IP addresses based in Canada
- D. Deploy the Cloud Storage bucket to a Google Cloud region in Canada

Answer: B

Explanation:
Reference:
Because you can use your own private VPN to access the Canada-only bucket from anywhere in the world.

NEW QUESTION # 17
Your company has multiple internal applications used by your employees. You also have to give access to certain vendors and contractors. What is a good option for you to adopt?

- A. Use an IDaaS (Identity as a Service) product that can centrally manage authenti-cation and authorization for the applications.
- B. Use an external identity provider that is famous and popular like Facebook or Twitter; that way, even your vendors and contractors will have an account there.
- C. Allow all users, especially contractors and vendors, to bring their own identities, like those at gmail.com.
- D. Keep the credentials separate for each application to reduce the blast radius in case of any issues.

Answer: A

Explanation:
IDaaS - identity providers managed by the company give better control over security and privacy. Security/access can be set granularly, while also being centralized. You don't have to manage multiple credentials.

NEW QUESTION # 18
What load balancer type is supported with Cloud Armor security policies?

- A. SSL Proxy, HTTP(S) and SSL
- B. Regional SSL
- C. HTTP(S) and SSL
- D. HTTP(S) Only

Answer: D

Explanation:
Google Cloud Armor security policies protect your application by providing Layer 7 filtering and by scrubbing incoming requests for common web attacks or other Layer 7 attributes to potentially block traffic before it reaches your load balanced backend services or backend buckets. Each security policy is made up of a set of rules that filter traffic based on conditions such as an incoming request's IP address, IP range, region code, or request headers.
-> Google Cloud Armor security policies are available only for backend services behind an external HTTP(S) load balancer. The load balancer can be in Premium Tier or Standard Tier.
-> Google Cloud Armor security policies and IP DENY lists and ALLOW lists are available only for HTTP(S) load balancing.

NEW QUESTION # 19
Why is data stored in Google Cloud secure and private?

- A. Data is encrypted by Cloud Data Loss Prevention
- B. Data is encrypted by default
- C. Data is encrypted when an appropriate tag is applied
- D. Data is encrypted by the Security Command Center

Answer: B

Explanation:
https://cloud.google.com/docs/security/encryption/default-encryption#:~:text=Google%20uses%20the%20Advanced%20Encryption,to%202015%20that%20use%20AES128

NEW QUESTION # 20
Your organization recently migrated its compute workloads to Google Cloud. You want these workloads in Google Cloud to privately and securely access your large volume of on-premises data, and you also want to minimize latency.
What should your organization do?

- A. Peer your on-premises data center to Google's Edge Network
- B. Use Transfer Appliance to securely make your data available to Google Cloud
- C. Use Storage Transfer Service to securely make your data available to Google Cloud
- D. Create a VPC between your on-premises data center and your Google resources

Answer: D

NEW QUESTION # 21
