実用的-便利なAIF-C01日本語対策試験-試験の準備方法AIF-C01日本語版

JPTTestKingのAIF-C01無料デモの合格率に関する記録で実証されているように、Amazon合格率は設立当初から98%~99%の歴史的記録を維持しています。現時点では、AIF-C01テストトレントの合格率は他の試験テストの合格率と比較して最高と言えますが、着実に進歩しているという真実を知っているため、専門家全員が現在

の結果に満足することはありません AIF-C01準備資料は、AWS Certified AI PractitionerのAIF-C01試験問題作成の分野で永久に勝つことができますか。

Amazon AIF-C01 認定試験の出題範囲:

トピック	出題範囲
トピック 1	<ul style="list-style-type: none">Applications of Foundation Models: This domain examines how foundation models, like large language models, are used in practical applications. It is designed for those who need to understand the real-world implementation of these models, including solution architects and data engineers who work with AI technologies to solve complex problems.
トピック 2	<ul style="list-style-type: none">Security, Compliance, and Governance for AI Solutions: This domain covers the security measures, compliance requirements, and governance practices essential for managing AI solutions. It targets security professionals, compliance officers, and IT managers responsible for safeguarding AI systems, ensuring regulatory compliance, and implementing effective governance frameworks.
トピック 3	<ul style="list-style-type: none">Fundamentals of Generative AI: This domain explores the basics of generative AI, focusing on techniques for creating new content from learned patterns, including text and image generation. It targets professionals interested in understanding generative models, such as developers and researchers in AI.
トピック 4	<ul style="list-style-type: none">Guidelines for Responsible AI: This domain highlights the ethical considerations and best practices for deploying AI solutions responsibly, including ensuring fairness and transparency. It is aimed at AI practitioners, including data scientists and compliance officers, who are involved in the development and deployment of AI systems and need to adhere to ethical standards.
トピック 5	<ul style="list-style-type: none">Fundamentals of AI and ML: This domain covers the fundamental concepts of artificial intelligence (AI) and machine learning (ML), including core algorithms and principles. It is aimed at individuals new to AI and ML, such as entry-level data scientists and IT professionals.

Amazon AWS Certified AI Practitioner 認定 AIF-C01 試験問題 (Q292-Q297):

質問 # 292

An online learning company with large volumes of education materials wants to use enterprise search.

- A. Amazon Comprehend
- B. Amazon Personalize
- C. Amazon Kendra
- D. Amazon Textract

正解: C

解説:

The correct answer is C - Amazon Kendra, AWS's enterprise search service designed for organizations with large, diverse document repositories. Kendra uses machine learning and natural language understanding (NLU) to provide semantic search, meaning it retrieves results based on meaning rather than keyword matching. According to AWS documentation, Kendra is ideal for educational, enterprise, and knowledge-management scenarios where users need fast, accurate retrieval across PDFs, HTML, Office documents, FAQs, and multimedia transcripts. Kendra connectors can index content from S3, SharePoint, LMS platforms, and internal databases, making it perfect for large volumes of training materials. Amazon Comprehend (A) is for NLP tasks like entity extraction, not enterprise search. Amazon Textract (B) extracts text from PDFs and scanned materials but does not provide search capabilities. Amazon Personalize (D) is for personalized recommendations, not document retrieval. Kendra is purpose-built for enterprise search and aligns directly with the company's needs.

Referenced AWS Documentation:

* Amazon Kendra Developer Guide - Enterprise Search

* AWS ML Specialty Guide - Intelligent Search Systems

質問 # 293

A loan company is building a generative AI-based solution to offer new applicants discounts based on specific business criteria. The company wants to build and use an AI model responsibly to minimize bias that could negatively affect some customers. Which actions should the company take to meet these requirements? (Select TWO.)

- A. Ensure that the model runs frequently.
- B. Use the Recall-Oriented Understudy for Gisting Evaluation (ROUGE) technique to ensure that the model is 100% accurate.
- C. Ensure that the model's inference time is within the accepted limits.
- D. Evaluate the model's behavior so that the company can provide transparency to stakeholders.
- E. Detect imbalances or disparities in the data.

正解: D、E

解説:

To build an AI model responsibly and minimize bias, it is essential to ensure fairness and transparency throughout the model development and deployment process. This involves detecting and mitigating data imbalances and thoroughly evaluating the model's behavior to understand its impact on different groups.

* Option A (Correct): "Detect imbalances or disparities in the data": This is correct because identifying and addressing data imbalances or disparities is a critical step in reducing bias. AWS provides tools like Amazon SageMaker Clarify to detect bias during data preprocessing and model training.

* Option C (Correct): "Evaluate the model's behavior so that the company can provide transparency to stakeholders": This is correct because evaluating the model's behavior for fairness and accuracy is key to ensuring that stakeholders understand how the model makes decisions.

Transparency is a crucial aspect of responsible AI.

* Option B: "Ensure that the model runs frequently" is incorrect because the frequency of model runs does not address bias.

* Option D: "Use the Recall-Oriented Understudy for Gisting Evaluation (ROUGE) technique to ensure that the model is 100% accurate" is incorrect because ROUGE is a metric for evaluating the quality of text summarization models, not for minimizing bias.

* Option E: "Ensure that the model's inference time is within the accepted limits" is incorrect as it relates to performance, not bias reduction.

AWS AI Practitioner References:

* Amazon SageMaker Clarify: AWS offers tools such as SageMaker Clarify for detecting bias in datasets and models, and for understanding model behavior to ensure fairness and transparency.

* Responsible AI Practices: AWS promotes responsible AI by advocating for fairness, transparency, and inclusivity in model development and deployment.

質問 # 294

A company has a team of AI practitioners that builds and maintains AI applications in an AWS account. The company must keep records of the actions that each AI practitioner takes in the AWS account for audit purposes.

Which AWS service will meet these requirements?

- A. AWS Trusted Advisor
- B. AWS Config
- C. AWS Audit Manager
- D. AWS CloudTrail

正解: D

解説:

Comprehensive and Detailed Explanation From Exact AWS AI documents:

AWS CloudTrail records API calls and user activity across AWS services, including:

- * Who performed an action
- * What action was taken
- * When and from where the action occurred

AWS governance guidance identifies CloudTrail as the primary service for audit logging and accountability.

Why the other options are incorrect:

- * AWS Config (B) tracks configuration changes, not user actions.
- * Audit Manager (C) assesses compliance but does not record individual actions.
- * Trusted Advisor (D) provides best-practice recommendations.

AWS AI document references:

- * AWS CloudTrail Overview
- * Auditing User Activity on AWS
- * Governance and Compliance for AI Workloads

質問 # 295

Which task represents a practical use case to apply a regression model?

- A. Create a picture that shows a specific object.
- B. Use historical data to predict future temperatures in a specific city.
- C. Cluster movies based on movie ratings and viewers.
- D. Suggest a genre of music for a listener from a list of genres.

正解: B

解説:

* Regression predicts continuous numerical values (e.g., stock prices, temperatures).

* A is classification (genre selection).

* B is clustering.

* D is generative AI/computer vision.

AWS ML Glossary - Regression

質問 # 296

A company wants to use language models to create an application for inference on edge devices. The inference must have the lowest latency possible.

Which solution will meet these requirements?

- A. Incorporate a centralized small language model (SLM) API for asynchronous communication with edge devices.
- B. Incorporate a centralized large language model (LLM) API for asynchronous communication with edge devices.
- C. Deploy optimized small language models (SLMs) on edge devices.
- D. Deploy optimized large language models (LLMs) on edge devices.

正解: C
