You have an Azure subscription that contains a resources group named RG1. RG1 contains the following resources:

- * Four Azure virtual machines that run Windows Server and have Internet Information Services (IIS) installed
- * SQL Server on an Azure virtual machine
- * An Azure Load Balancer

答案:

解題說明:

Answer Area

Create an agent pool

Create a deployment group

Execute the pipeline

Add and configure a deployment group job for the pipeline.

- 1 - Create an agent pool
- 2 - Create a deployment group.
- 3 - Execute the pipeline
- 4 - Add and configure a deployment group job for the pipeline.

Explanation:

Step 1: Create an agent pool

Azure Pipelines provides a pre-defined agent pool named Azure Pipelines with Microsoft-hosted agents.

Step 2: Create a deployment group

Deployment groups make it easy to define logical groups of target machines for deployment, and install the required agent on each machine.

Step 3: Execute the Azure Pipelines Agent extension to the virtual machines

Install the Azure Pipelines Agent Azure VM extension

Step 4: Add and configure a deployment group job for the pipeline

Tasks that you define in a deployment group job run on some or all of the target servers, depending on the arguments you specify for the tasks and the job itself.
