UiPath Automation Business Analyst Associate Exam (2023.10) Sample Questions (Q27-Q32):

NEW QUESTION # 27

In the Kickoff stage, which of the following must be defined and communicated?

- A. Only UAT test cases
- B. Post-deployment SLA
- C. Client team vacation schedules

- **D. Access to Studio and Orchestrator**

Answer: D

Explanation:

In the Kickoff stage, access to key platforms like UiPath Studio and Orchestrator must be clearly defined and communicated. Early access planning is essential to avoid development delays and ensure that developers, robots, and testers can interact with the required environments and systems.

In many projects, delays occur because access provisioning is not handled upfront. That's why UiPath emphasizes capturing these details early in the Application Tracker, with input from the Solution Architect and Infrastructure Engineer.

By discussing access needs during Kickoff, teams can involve the Client IT team early, prepare credentials and environments, and prevent blockers during later stages such as development and testing.

NEW QUESTION # 28

What are the two teams associated with the Automation Implementation Methodology?

- A. Developer Team and Infrastructure Team
- B. Support Team and IT Team
- **C. Implementation Team and Client Team**
- D. Business Team and Delivery Team

Answer: C

Explanation:

The two primary teams involved in the UiPath Automation Implementation Methodology are the Implementation Team and the Client Team. Each team plays a crucial and distinct role throughout the automation lifecycle.

The Implementation Team is typically composed of UiPath experts such as solution architects, automation developers, business analysts, project managers, and infrastructure engineers. This team is responsible for the end-to-end execution of the automation project - from analyzing business processes and designing solutions to developing, testing, and deploying automation.

On the other hand, the Client Team represents the business unit that owns the process to be automated. This team provides insights into the existing processes, participates in requirement gathering, validates the business value of automation, and performs UAT (User Acceptance Testing). They are the key beneficiaries of the automation solution and play a critical role in ensuring the final output meets their needs.

Together, these two teams ensure collaboration between technical and business stakeholders, aligning the automation project with strategic business goals and achieving successful implementation outcomes.

NEW QUESTION # 29

Which of the following stages comes immediately after the Process Analysis stage?

- A. User Acceptance Testing
- **B. Solution Design**
- C. Development and Testing
- D. Business Case and Technical Validation

Answer: B

Explanation:

After the Process Analysis stage, the next step in the UiPath Automation Implementation Methodology is the Solution Design stage. In this stage, the Solution Architect, along with the Automation Developer and Project Manager, uses the insights from the Process Definition Document (PDD) to create a technical blueprint for the automation.

This stage is critical because it translates the "what" from the business process into the "how" in terms of automation design. It involves designing the To-Be process flow, defining technical components, data handling logic, exception paths, and other automation modules. The output of this stage is the Approved Solution Design Document (SDD), which acts as the guideline for developers during the next phase.

The Solution Design phase ensures the automation is scalable, maintainable, and aligned with UiPath best practices. A strong design phase reduces errors, shortens development time, and provides a clear roadmap for testing and deployment.

NEW QUESTION # 30

Which UiPath platform layer includes tools such as UiPath Studio and Document Understanding?

- A. Measure
- **B. Automate**
- C. Orchestrate
- D. Discover

Answer: B

Explanation:

The Automate layer of the UiPath Business Automation Platform includes tools such as UiPath Studio, UiPath Action Center, and UiPath Document Understanding. This layer is focused on building and deploying automation workflows that execute the desired processes.

* UiPath Studio is the development environment where automation workflows are built.

* Document Understanding allows robots to extract, interpret, and process data from structured and unstructured documents.

* Action Center enables human-in-the-loop automation by allowing manual intervention where needed.

The Automate layer brings the business logic to life by translating process requirements into executable robot actions. It's at the core of UiPath's capability to reduce manual effort and increase operational efficiency through software robots.

NEW QUESTION # 31

At what stage should the scope of a specific automation be finalized?

- A. Kickoff
- B. Solution Design
- **C. Process Analysis**
- D. Business Case and Technical Validation

Answer: C

Explanation:

The scope of a specific automation is finalized during the Process Analysis stage. While the Kickoff stage defines the high-level scope of the overall project, the detailed scope for each process is only finalized after the process has been thoroughly analyzed.

During Process Analysis, the Business Analyst and Solution Architect study the process in its As-Is state and collaborate to document it in the Process Definition Document (PDD). This document serves as the official agreement on what will be automated, the process boundaries, exceptions, rules, and inputs/outputs.

Once the PDD is reviewed and approved by both the Implementation and Client Teams, the detailed scope is considered locked.

This helps prevent scope creep during later stages and ensures that development remains focused on delivering the agreed automation features.
