## **IIBA Entry Certificate in Business Analysis (ECBA) Sample Questions (Q15-Q20):**

### **NEW QUESTION # 15**

When defining the requirements architecture, a business analyst (BA) examines the relationships among requirements to ensure that they satisfy the following quality criteria:

- A. value-add, functional, auditable, edited, approved.
- **B. defined, necessary, correct, unambiguous, consistent.**
- C. prioritized, understandable, familiar, kinesthetic, visual.
- D. atomic, complete, concise, feasible, testable.

**Answer: B**

Explanation:

Business analysts examine each relationship to ensure that the relationships satisfy the following quality criteria:

- Defined: there is a relationship and the type of the relationship is described.
- Necessary: the relationship is necessary for understanding the requirements holistically.
- Correct: the elements do have the relationship described.
- Unambiguous: there are no relationships that link elements in two different and conflicting ways.
- Consistent: relationships are described in the same way, using the same set of standard descriptions as defined in the viewpoints.

### **NEW QUESTION # 16**

During the requirement life cycle management, what should a business analyst (BA) do to extend the value of requirements beyond the current initiative?

- A. Trace
- **B. Maintain**
- C. Assess
- D. Prioritize

**Answer: B**

### **NEW QUESTION # 17**

A technique that is used to elicit information by viewing and understanding activities and their context is known as:

- A. workshop.
- B. brainstorming.
- C. review.
- **D. observation.**

**Answer: D**

### **NEW QUESTION # 18**

Which task is performed when the business analyst (BA) ensures that stakeholders have a shared understanding of the outcomes of elicitation?

- A. Manage stakeholder collaboration
- **B. Confirm elicitation results**
- C. Conduct elicitation
- D. Communicate business analysis information

**Answer: B**

### NEW QUESTION # 19

The requirements elicitation technique used to iteratively validate the needs of stakeholders that interact with the application is:

- A. observation.
- B. reverse engineering.
- C. prototyping
- D. interface analysis

**Answer: C**

Explanation:

Prototyping is a requirements elicitation technique that involves creating a preliminary version of a system or product to validate and refine the stakeholders' needs. It is an iterative process that helps in discovering requirements by providing a tangible representation of the product that stakeholders can interact with. This interaction allows stakeholders to give immediate feedback, which is then used to refine the prototype in subsequent iterations. Prototyping is particularly useful when stakeholders find it difficult to articulate their needs or when the requirements are not well understood.
