<https://drive.google.com/open?id=16oOBjYrYlbqDBiQJ3M-IXtL8nOvSc-M>

Our Secure-Software-Design question torrent not only have reasonable price but also can support practice perfectly, as well as in the update to facilitate instant upgrade for the users in the first place, compared with other education platform on the market, the Secure-Software-Design Exam Question can be said to have high quality performance. We can sure that you will never regret to download and learn our study material, and you will pass the exam at your first try.

With the development of computer hi-tech, the computer application is widely used in recent years. The demand of the higher position about computer is increasing. Secure-Software-Design exam vce files help people who are interested in WGU company. If you have a useful certification, you will have outstanding advantage over other applicants while interviewing. Our Secure-Software-Design Exam Vce files help you go through examination and get certifications.

Valid Secure-Software-Design Torrent | Professional Secure-Software-Design: WGUSecure Software Design (KEO1) Exam 100% Pass

Our Secure-Software-Design practice dumps is high quality product revised by hundreds of experts according to the changes in the syllabus and the latest developments in theory and practice, it is focused and well-targeted, so that each student can complete the learning of important content in the shortest time. With Secure-Software-Design training prep, you only need to spend 20 to 30 hours of practice before you take the Secure-Software-Design exam.

WGUSecure Software Design (KEO1) Exam Sample Questions (Q47-Q52):

NEW QUESTION # 47

The security team is reviewing all noncommercial software libraries used in the new product to ensure they are being used according to the legal specifications defined by the authors.

What activity of the Ship SDL phase is being performed?

- A. Final security review
- **B. Open-source licensing review**
- C. Policy compliance analysis
- D. Penetration testing

Answer: B

Explanation:

The activity described pertains to the review of noncommercial software libraries to ensure compliance with the legal specifications set by the authors. This is part of the open-source licensing review, which is a critical activity in the Ship phase of the Security Development Lifecycle (SDL). This review ensures that all open-source components are used in accordance with their licenses, which is essential for legal and security compliance.

: The Ship phase of the SDL includes various activities such as policy compliance review, vulnerability scanning, penetration testing, open-source licensing review, and final security and privacy reviews¹². The open-source licensing review specifically addresses the legal aspects of using third-party software components².

NEW QUESTION # 48

The product security incident response team (PSIRT) has decided to make a formal public disclosure, including base and temporal common vulnerability scoring system (CVSS) scores and a common vulnerabilities and exposures (CVE) ID report, of an externally discovered vulnerability.

What is the most likely reason for making a public disclosure?

- A. Notification of a vulnerability from an external party has occurred.
- B. The vulnerability reporter has threatened to make the finding public after being notified that their case was not credible.
- **C. The response team has determined that the vulnerability is credible.**
- D. The potential for increased public awareness of a vulnerability is probable, which could lead to higher risk for customers.

Answer: C

NEW QUESTION # 49

Which threat modeling approach concentrates on things the organization wants to protect?

- **A. Asset-centric**
- B. Server-centric
- C. Attacker-centric
- D. Application-centric

Answer: A

Explanation:

The Asset-centric approach to threat modeling focuses on identifying and protecting the assets that are most valuable to an organization. This method prioritizes the assets themselves, assessing their sensitivity, value, and the impact on the business should they be compromised. It is a strategic approach that aims to safeguard the confidentiality, integrity, and availability of the organization's key assets.

NEW QUESTION # 50

Which threat modeling step assigns a score to discovered threats?

- A. Set the Scope
- **B. Rate Threats**
- C. Analyze the Target
- D. Identify and Document Threats

Answer: B

NEW QUESTION # 51

What are the three primary goals of the secure software development process?

- A. Redundancy, scalability, and portability
- B. Cost, speed to market, and profitability
- **C. Confidentiality, integrity, and availability**
- D. Performance, reliability, and maintainability

Answer: C

Explanation:

The three primary goals of the secure software development process, often referred to as the CIA triad, are confidentiality, integrity, and availability. These principles form the cornerstone of security considerations in the software development life cycle (SDLC).

* Confidentiality ensures that sensitive information is accessed only by authorized individuals and systems. This involves implementing access controls and encryption to protect data from unauthorized access.

* Integrity refers to maintaining the accuracy and consistency of data across its lifecycle. This means that the data is not altered or tampered with by unauthorized entities. Techniques like checksums and digital signatures help ensure data integrity.

* Availability ensures that information and resources are accessible to authorized users when needed.

This involves creating resilient systems that can withstand attacks and recover quickly from any disruptions.

By integrating these security goals into each phase of the SDLC, from planning and design to development, testing, and maintenance, organizations can create more secure software systems that are resilient to cyber threats.
