SAP Certified Associate - SAP S/4HANA Cloud Private Edition - Transportation Management Sample Questions (Q34-Q39):

NEW QUESTION # 34

What business documents (objects) can be used as a base for track and trace functionality in transportation management? Note: There are 2 correct answers to this question.

- A. Forwarding order
- B. Freight order
- C. Resource
- D. Service order

Answer: A,B

Explanation:

In SAP S/4HANA Transportation Management, track and trace functionality is supported by documents that represent the transportation process and contain relevant tracking information. According to the SAP documentation:

* Freight order (A) is a key document used for road or rail transport, containing details about the transportation process, including stages, carriers, and tracking events, making it suitable for track and trace.

* Forwarding order (D) is used in logistics service provider scenarios and represents the customer's transportation requirements, including tracking information across multiple stages.

The other options are incorrect:

* Resource (B) refers to vehicles, drivers, or other assets used in transportation, not a document for tracking goods.

* Service order (C) is used for internal service-related activities and does not support track and trace functionality for goods transportation.

SAP S/4HANA Cloud Private Edition, Transportation Management Study Guide: Unit 4 - Freight Order Management, Section on Track and Trace.

SAP Help Portal: Transportation Management - Track and Trace ().

NEW QUESTION # 35

You are a consultant on an SAP S/4HANA Cloud Greenfield project.

Which of the following aspects should you focus on to achieve and maintain clean core data quality?

Note: There are 2 correct answers to this question.

- A. Stability
- B. Accuracy
- C. Timeliness
- D. Efficiency

Answer: A,D

Explanation:
Managing Clean Core

NEW QUESTION # 36

Which attributes can you directly define in a schedule? Note: There are 2 correct answers to this question.

- A. Capacity
- B. Carrier
- C. Downtimes
- D. Transportation lane

Answer: B,D

Explanation:

In SAP S/4HANA Transportation Management, a schedule defines planned transportation activities, such as regular departures. According to the SAP documentation, the following attributes can be directly defined in a schedule:

* Transportation lane (C): The schedule specifies the transportation lane (route between locations) it applies to, defining the path for the scheduled transport.

* Carrier (D): The carrier responsible for the transport can be defined in the schedule, ensuring the correct partner is assigned.

The other options are incorrect:

* Capacity (A) is defined in vehicle resources or transportation allocations, not directly in schedules.

* Downtimes (B) are managed in vehicle resources or calendars, not schedules.

Reference:

NEW QUESTION # 37

In a side-by-side scenario, which of the following objects can you map from transportation management (TM) to materials management (MM)? Note: There are 2 correct answers to this question.

- A. TM charge type to MM service master
- B. TM charge category to MM G/L account
- C. TM charge type to MM service material group
- D. TM purchasing organization to MM purchasing organization

Answer: A,D

Explanation:

In a side-by-side scenario integrating SAP S/4HANA Transportation Management (TM) with Materials Management (MM), specific objects are mapped to ensure seamless data transfer. According to the SAP documentation:

* TM charge type to MM service master (A) is mapped to link transportation-related charges to service master records in MM, enabling accurate service procurement.

* TM purchasing organization to MM purchasing organization (C) is mapped to align the organizational structure between TM and MM, ensuring consistent purchasing processes.

The other options are incorrect:

* TM charge category to MM G/L account (B) is not a standard mapping, as charge categories are higher-level groupings and are not directly linked to G/L accounts.

* TM charge type to MM service material group (D) is not typically mapped, as service material groups are less specific than service master records.

Reference:

NEW QUESTION # 38

Transportation resources are instances of means of transport that allow detailed planning to take place, taking availability, suitability

or various restrictions into account. Resources must be created in SAP TM. A vehicle resource always represents a specific vehicle, for example:

- A. Unloading forklift with a capacity of 100 tons per hour.
- B. For purchase orders, source locations are stored on item level.
- C. Double-axis truck with maximum number of 20 pallets. 12 tons weight capacity, 37 m³.

NEW QUESTION # 39
