Free PDF 2025 C_BW4H_2404: SAP Certified Associate - Data Engineer - Data Fabric –Valid Exam Sample Questions

Fast2test recognizes the acute stress the aspirants undergo to get trust worthy and authentic SAP Certified Associate - Data Engineer - Data Fabric (C_BW4H_2404) exam study material. They carry undue pressure with the very mention of appearing in the SAP C_BW4H_2404 certification test. Here the Fast2test come forward to prevent them from stressful experiences by providing excellent and top-rated SAP C_BW4H_2404 Practice Test questions to help them hold the SAP C_BW4H_2404 certificate with pride and honor.

SAP Certified Associate - Data Engineer - Data Fabric Sample Questions

(Q56-Q61):

NEW QUESTION # 56

In a BW query with cells, you need to overwrite the initial definition of a cell. With which cell types can this be achieved?? Note: There are 2 correct answers to this question.

- A. Selection cell
- B. Formula cell
- C. Reference cell
- D. Help cell

Answer: A,B

NEW QUESTION # 57

How can you protect all InfoProviders against displaying their data?

- A. By flagging all InfoAreas as authorization-relevant
- B. By flagging the characteristic 0INFOPROV as authorization-relevant
- C. By flagging the characteristic 0TCAIPROV as authorization-relevant
- D. By flagging all InfoProviders as authorization-relevant

Answer: C

Explanation:

To protect all InfoProviders against displaying their data, you need to ensure that access to the InfoProviders is controlled through authorization mechanisms. Let's evaluate each option:

* Option A: By flagging all InfoProviders as authorization-relevant This is incorrect. While individual InfoProviders can be flagged as authorization-relevant, this approach is not scalable or efficient when you want to protect all InfoProviders. It would require manually configuring each InfoProvider, which is time-consuming and error-prone.

* Option B: By flagging the characteristic 0TCAIPROV as authorization-relevant This is correct. The characteristic 0TCAIPROV represents the technical name of the InfoProvider in SAP BW/4HANA. By flagging this characteristic as authorization-relevant, you can enforce access restrictions at the InfoProvider level across the entire system. This ensures that users must have the appropriate authorization to access any InfoProvider.

* Option C: By flagging all InfoAreas as authorization-relevant This is incorrect. Flagging InfoAreas as authorization-relevant controls access to the logical grouping of InfoProviders but does not provide granular protection for individual InfoProviders. Additionally, this approach does not cover all scenarios where InfoProviders might exist outside of InfoAreas.

* Option D: By flagging the characteristic 0INFOPROV as authorization-relevant This is incorrect. The characteristic 0INFOPROV is not used for enforcing InfoProvider-level authorizations. Instead, it is typically used in reporting contexts to display the technical name of the InfoProvider.

* SAP BW/4HANA Security Guide: Describes how to use the characteristic 0TCAIPROV for authorization purposes.

* SAP Help Portal: Provides detailed steps for configuring authorization-relevant characteristics in SAP BW/4HANA.

* SAP Best Practices for Security: Highlights the importance of protecting InfoProviders and the role of 0TCAIPROV in securing data.

References: In conclusion, the correct answer is B, as flagging the characteristic 0TCAIPROV as authorization-relevant ensures comprehensive protection for all InfoProviders in the system.

NEW QUESTION # 58

Which join types can you use in a Composite Provider? Note: There are 3 correct answers to this question.

- A. Full Outer join
- B. Temporal hierarchy join
- C. Text join
- D. Inner join
- E. Referential join

Answer: A,D,E

Explanation:

C. Full Outer Join:

* Combines data from both sources, including unmatched rows from either side.

D. Referential Join:

* Optimized join that assumes data consistency between the sources for faster query performance.

E. Inner Join:

* Only combines rows with matching keys in both sources, commonly used for exact matches.

References: SAP BW/4HANA Composite Provider documentation (SAP Help Portal).

NEW QUESTION # 59

You are involved in an SAP BW/4HANA project focusing on General Ledger reporting want to use the SAP ERP standard DataSource OFI_GL_14 (New GL Items) which is not active in your SAP ERP system.

Which transactions can be used to activate this DataSource? Note: There are 2 correct answers to this question.

- A. Transaction RSDS (DataSource Repository) in the SAP BW/4HANA system
- B. Transaction RSA5 (Installation of DataSource from Business Content) in the SAP ERP system
- C. Transaction RSORBCT (Data Warehousing Workbench: BI Content) in the SAP BW/4HANA system
- D. Transaction RSA2 (DataSource Repository) in the SAP ERP system

Answer: B,C

Explanation:

A. RSORBCT in SAP BW/4HANA system:

* This transaction enables you to activate DataSources as part of BI Content in the SAP BW/4HANA system.

* It handles content activation and transfer for reporting purposes.

B. RSA5 in SAP ERP system:

* This transaction is used to install DataSources from the delivered Business Content in SAP ERP. It makes the DataSource available for extraction.

References: SAP BW/4HANA and SAP ERP DataSource activation guides (SAP Help Portal).

NEW QUESTION # 60

Which options do you have when using the remote table feature in SAP Datasphere? Note: There are 3 correct answers to this question.

- A. Data can be persisted by using real-time replication.
- B. Data access can be switched from virtual to persisted but not the other way around.
- C. Data can be loaded using advanced transformation capabilities.
- D. Data can be persisted in SAP Datasphere by creating a snapshot (copy of data).
- E. Data can be accessed virtually by remote access to the source system.

Answer: A,D,E

NEW QUESTION # 61

.....
