NEW QUESTION # 79

Which operation is implemented by the Foundation Services of SAP Business Data Cloud?

- A. Execution of machine learning algorithms to generate additional insights.
- B. Storage of raw data inside a CDS view.
- C. Generation of an analytic model by adding semantic information.
- D. Data transformation and enrichment to generate a data product.

Answer: D

Explanation:

The Foundation Services component of SAP Business Data Cloud (BDC) is responsible for orchestrating the fundamental processes of data preparation and productization. Specifically, a key operation implemented by Foundation Services is data transformation and enrichment to generate a data product. Foundation Services takes raw data ingested from various business applications and applies necessary transformations, cleanses it, and enriches it with additional context or calculated attributes. This process is crucial for creating high-quality, consumable data products, which are curated and semantically rich datasets designed for specific business use cases. While machine learning algorithms are executed by Intelligent Applications (which consume these data products), and analytic models are built in SAP Datasphere (which is part of the BDC ecosystem), Foundation Services focuses on the foundational work of preparing and productizing the data itself, ensuring it's ready for advanced analytics and consumption.
