The punishment received by laziness is not only its own failure, but also the success of others. No one wants to be inferior to others. So, it's time to change yourself and make yourself better! Our 1Z0-770 study materials want to give you some help on your dream journey. Believe me, the help you get is definitely what you need. On one hand, you can easily pass the 1Z0-770 Exam and get the according 1Z0-770 certification. On the other hand, you will be definitely encouraged to make better progress from now on.

Oracle APEX Developer Professional Sample Questions (Q39-Q44):

NEW QUESTION # 39
Which statement is true about Unified Task List in the Approvals component?

- A. It is a shared component used to configure task parameters, participants, actions, and due dates.
- B. It is a page that shows details for a specific task, which can include metadata, history, comments, and actions.
- C. It is a page type in the Create Page Wizard that is used to create a summary of tasks that functions like an inbox.

Answer: C

Explanation:
Explanation
The Approvals component in Oracle APEX is a feature that allows developers to create approval workflows for business processes

that require human intervention or decision making. The Approvals component consists of three main elements: Tasks, Task List Page, and Task Details Page. The Unified Task List is a page type in the Create Page Wizard that is used to create a summary of tasks that functions like an inbox for end users.

The Unified Task List displays all tasks assigned to or created by an end user along with their status, priority, due date, etc. End users can filter, sort, search, view details, and perform actions on tasks from this page.

NEW QUESTION # 40

Which two statements are true about the Create Application Wizard?

- A. It allows the uploading of JavaScript or CSS files required for an application.
- B. It allows application pages to be added or deleted.
- C. It allows application pages to be reordered.
- D. It allows the application authorization to be changed

Answer: B,C

Explanation:
Explanation
The Create Application Wizard is a tool that allows developers to create a new application by following a series of steps. Some of the actions that you can perform using the Create Application Wizard are:

Reorder application pages. You can use the Reorder Pages option in the Pages step to change the order of the pages in your application by dragging and dropping them.

Add or delete application pages. You can use the Add Page or Delete Page options in the Pages step to add new pages or delete existing pages from your application. You can also use the Create Page Wizard to create additional pages after creating the application. You cannot upload JavaScript or CSS files required for an application or change the application authorization using the Create Application Wizard.

You can use other features in App Builder to perform these actions, such as Shared Components > User Interface > Files and Shared Components > Security > Authentication Schemes. Verified References:

NEW QUESTION # 41

Which of the following are preconfigured authentication schemes?

- A. LDAP Directory
- B. Social Sign In
- C. HTTP Header Variables
- D. All of them
- E. Open Door Credentials

Answer: D

Explanation:
Explanation
Oracle APEX provides several preconfigured authentication schemes that follow a standard behavior for authentication and session management. You can select a preconfigured authentication scheme from the gallery when you create an authentication scheme for your application. The preconfigured authentication schemes are:

Open Door Credentials: This scheme enables anyone to access your application using a built-in login page that captures a user name.

LDAP Directory: This scheme authenticates a user and password with an authentication request to a LDAP server.

HTTP Header Variable: This scheme authenticates users externally by storing the username in a HTTP Header variable set by the web server.

Social Sign-In: This scheme supports authentication with Google, Facebook, and other social networks that support OpenID Connector OAuth2 standards.

Oracle APEX Accounts: This scheme authenticates users against Oracle APEX user accounts that are created within and managed in the APEX user repository.

Custom Authentication: This scheme allows you to create a custom authentication scheme from scratch to have complete control over your authentication interface.

Database Accounts: This scheme authenticates users using database schema accounts.

Oracle Application Server Single Sign-On Server: This scheme delegates authentication to the Oracle AS Single Sign-On (SSO)

Server.
SAML Sign-In: This scheme delegates authentication to the Security Assertion Markup Language (SAML) Sign In authentication scheme.

NEW QUESTION # 42
Choose the three supported spatial geometry objects in Maps.

- A. Heat map
- B. Points
- C. Polygons
- D. Bars

Answer: A,B,C

Explanation:
Explanation
A map is a type of component that enables users to view and manage data based on geographic locations. A map consists of a background map and spatial geometry objects that are sourced from data in a table or from a REST data source. Spatial geometry objects are shapes that represent real-world features on a map, such as points, lines, polygons, or heat maps. Three of the supported spatial geometry objects in Oracle APEX are:
Polygons: A polygon is a closed shape that consists of three or more vertices connected by straight line segments. A polygon can represent an area on a map, such as a country, a state, a city, or a building. A polygon can have different colors, patterns, or borders to indicate different attributes or categories of the data.
Heat map: A heat map is a type of visualization that uses color gradients to show the density or intensity of data values in a geographic area. A heat map can represent the distribution or variation of a numeric variable on a map, such as population, income, crime rate, or temperature.
Points: A point is a zero-dimensional shape that represents a single location on a map. A point can have different symbols, sizes, or colors to indicate different attributes or categories of the data. A point can also have a label or a tooltip to display additional information about the data.

NEW QUESTION # 43
When you create an Access Control Page, which three of the following Access Roles get created?

- A. Reader
- B. Developer
- C. Contributor
- D. Administrator

Answer: A,C,D

Explanation:
Explanation
When you create an Access Control Page using the Create Page Wizard, three of the following Access Roles get created: Reader, Administrator, and Contributor. These roles are predefined by APEX and correspond to the authorization schemes that control the access to the application, pages, or page components1. Reader role grants read-only access to the application. Administrator role grants full access to the application, including administrative and edit privileges. Contributor role grants edit privileges to the application, but not administrative privileges2. Developer role is not a default Access Role created by the wizard, but you can create your own custom roles and assign them to users on the Application Access Control page.

NEW QUESTION # 44
......

The most notable feature of our 1Z0-770 learning quiz is that they provide you with the most practical solutions to help you learn the exam points of effortlessly and easily, then mastering the core information of the certification course outline. Their quality of our 1Z0-770 Study Guide is much higher than the quality of any other materials, and questions and answers of 1Z0-770 training materials contain information from the best available sources.
