

Choosing the Right Format for Your Oracle 1Z0-084 Questions Preparation with Exams

BTW, DOWNLOAD part of TrainingQuiz 1Z0-084 dumps from Cloud Storage: <https://drive.google.com/open?id=1akuwTL08t7IjO4EsP7N6Q9CAsaDLuyZK>

If you just hold a diploma, it is very difficult to find a satisfactory job. Companies want you to come up with a 1Z0-084 certificate that better proves your strength. 1Z0-084 training materials can help you achieve this goal faster. Whether or not you believe it, there have been a lot of people who have obtained internationally certified certificates through 1Z0-084 Exam simulation. And with the certification, they all live a better life now.

Oracle 1Z0-084 Certification Exam is an excellent way for database professionals to demonstrate their expertise in performance and tuning management. By passing 1Z0-084 exam, candidates can prove to potential employers that they possess the knowledge and skills needed to manage and optimize Oracle Database 19c performance. Additionally, earning this certification can lead to career advancement opportunities and higher salaries.

Oracle 1Z0-084 exam is an essential certification for IT professionals who specialize in database performance and tuning management. Oracle Database 19c Performance and Tuning Management certification validates the candidates' expertise in designing, implementing, and managing Oracle Database 19c performance and tuning solutions. 1Z0-084 Exam covers a wide range of topics related to performance tuning, including database architecture, memory management, SQL tuning, database monitoring, and optimization techniques.

Enhance Your Preparation with the Oracle 1Z0-084 Online Practice Test Engine

We provide free PDF demo for each exam. This free demo is a small part of the official complete Oracle 1Z0-084 training dumps. The free demo can show you the quality of our exam materials. You can download any time before purchasing. You can tell if our products and service have advantage over others. I believe our Oracle 1Z0-084 training dumps will be the highest value with competitive price comparing other providers.

Oracle 1Z0-084 Certification Exam is an important certification for IT professionals who want to validate their skills and knowledge in Oracle Database 19c performance and tuning management. 1Z0-084 exam is designed to test the candidate's understanding of the Oracle Database 19c performance tuning concepts, best practices, and tools. It is also designed to validate the candidate's ability to analyze the database performance issues and suggest the best tuning solutions.

Oracle Database 19c Performance and Tuning Management Sample Questions (Q41-Q46):

NEW QUESTION # 41

Examine this statement and output:

```
SQL> select sid,
           state,
           wait_time/100 as "WAIT TIME IN SECONDS",
           event
       from v$session
       where username='OE';
```

SID	STATE	WAIT TIME IN SECONDS	EVENT
9857	WAITED KNOWN TIME	1354	rdbms ipc message
9822	WAITING	0	enq: TX - row lock contention
8779	WAITING	0	SQL*Net message from client

Which three statements are true?

- A. Session 9822 will always stop waiting if the session that owns the TX enqueue issues a COMMIT statement as session 9822 is the first session in the transaction queue.
- B. Session 9857 is not waiting.
- C. Session 9857 waited 1354 seconds for another process, which was also waiting for a transaction to end.
- D. Session 8779 may be waiting due to a network problem.
- E. Both 9822 and 8779 sessions are waiting for operating system resources.
- F. Session 8779 may be waiting for a user or application response.

Answer: A,D,F

Explanation:

For this SQL statement and output, we can analyze the EVENT column to understand the type of wait:

B: The event "SQL*Net message from client" typically indicates that the session is waiting for a response from the client. This can be due to a network issue, user response, or an application processing delay.

E: The event "SQL*Net message from client" also implies that the session is idle waiting for the client (a user or an application) to send a request to the server. This event usually indicates that the session is not actively working but is instead waiting for the next command.

F: The wait event "enq: TX - row lock contention" suggests that session 9822 is waiting for a row-level lock held by another session. If the holding session issues a COMMIT or ROLLBACK, the lock will be released, and session 9822 will stop waiting. Since this session is experiencing row lock contention, it implies it's waiting for a specific transaction to complete.

NEW QUESTION # 42

Which two options are part of a Soft Parse operation?

- A. Syntax Check
- B. Shared Pool Memory Allocation
- C. Semantic Check
- D. SQL Row Source Generation
- E. SQL Optimization

Answer: C

Explanation:

During a soft parse, Oracle checks the shared SQL area to see if an incoming SQL statement matches one already in the shared pool. This operation includes syntax and semantic checks. The syntax check ensures the statement is properly formed, and the semantic check confirms that all the objects referenced in the SQL statement exist and that the user has the necessary privileges to access them. - * Oracle Database SQL Tuning Guide, 19c

NEW QUESTION # 43

Which statement is true about DB time in V\$SYS_TIME_MODEL?

- A. DB time can be many times greater than the elapsed time since the database instance started.
- B. DB time includes the time spent executing the RMAN backup and restore command.
- C. DB time excludes the time spent waiting for a CPU in the operating system run queue.
- D. DB time is organized as a simple list of statistics and any time period is attributable to only one statistic.

Answer: A

Explanation:

DB time includes the time spent on user and background processes. It can be greater than the elapsed time because it accumulates the active time of all the processes. For example, if two sessions are each active for 2 seconds at the same time, DB time would accumulate 4 seconds, while the elapsed time would be only 2 seconds. References:

- * Oracle Database Performance Tuning Guide, 19c
- * Oracle Database Reference, 19c

NEW QUESTION # 44

Which three statements are true about tuning dimensions and details of v\$sql_time_model and DB time?

- A. The proportion of WAIT TIME to CPU TIME always increases with increased system load.
- B. When WAIT TIME is high, instance tuning may improve performance.
- C. Systems in which CPU time is dominant need more tuning than those in which WAIT TIME is dominant.
- D. DB Time accounts for all time used by background processes and user sessions.
- E. Statspack cannot account for high CPU time when CPU TIME is a Top 10 event in DB time. When CPU time is high, SQL tuning may improve performance.
- F. Parse Time Elapsed accounts for successful soft and hard parse operations only.

Answer: B,D,E

Explanation:

A: Statspack is a performance diagnostic tool that can help identify high CPU usage issues. High CPU time may indicate that SQL statements need to be tuned for better performance.

D: High wait times can often be reduced by instance tuning, such as adjusting database parameters or improving I/O performance.

F: DB Time is a cumulative time metric that includes the time spent by both user sessions and background processes executing database calls. References:

- * Oracle Database Performance Tuning Guide, 19c
- * Oracle Database Concepts, 19c

NEW QUESTION # 45

Multiple sessions are inserting data concurrently into a table that has an LOB column.

At some point in time, one of the sessions cannot find available space in the LOB segment and needs to allocate a new extent.

Which wait event will be raised in the other sessions that need space in the LOB column?

- A. enq: TM - contention
- B. enq: SQ - contention
- C. enq: TX - allocate ITL entry
- D. enq: HW - contention

Answer: D

Explanation:

When sessions concurrently insert data into a table with an LOB column and one session needs to allocate a new extent because it cannot find available space, the wait event associated with this contention is "enq: HW - contention". The HW stands for High Water Mark which is related to space allocation in the database segment.

When a session needs to allocate a new extent, it may raise this wait event in other sessions that are also attempting to allocate space in the same LOB segment.
