Google Chrome-Enterprise-Administrator Study Materials Review - Latest Updated Chrome-Enterprise-Administrator Exam Certification and Authorized Latest Real Professional Chrome Enterprise Administrator Certification Exam Exam

Our company enjoys good reputation in the field of providing certificate exam materials. We are dedicated to providing good and efficient Chrome-Enterprise-Administrator study guide for candidates. You can pass the exam by using the Chrome-Enterprise-Administrator questions and answers of us, therefore we are pass guarantee. If you fail to pass the exam, we will money back guarantee, and the money will return to your payment account. We are confident with our Chrome-Enterprise-Administrator Study Guide, you can trust us.

Google Chrome-Enterprise-Administrator Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Manage Chrome Enterprise in the Cloud: This section of the exam measures skills of a Cloud Systems Administrator and focuses on preparing and configuring environments for Chrome cloud management. Candidates must demonstrate how to verify domains, use admin roles, configure organizational structures, deploy enrollment tokens, enable reporting, and maintain Chrome using the Google Admin console.
Topic 2	<ul style="list-style-type: none"> Chrome Extensions: This section of the exam measures skills of an Endpoint Security Manager and involves managing Chrome extension policies. It includes designing extension management strategies, handling extension exemptions, creating approval workflows, and assessing extensions for their risk and compliance with business continuity requirements.
Topic 3	<ul style="list-style-type: none"> Chrome Updates: This section of the exam measures skills of a Chrome IT Policy Analyst and addresses the various update methods available for Chrome. It includes selecting the right update strategy for different business and security needs, managing compliance across platforms, and adapting update methods based on environmental changes or risks.
Topic 4	<ul style="list-style-type: none"> Chrome Enterprise Management Fundamentals: This section of the exam measures skills of a Chrome Device Administrator and covers the foundational elements of managing Chrome in an enterprise. It includes understanding how policies are applied and resolved, differentiating managed browsers from profiles, and describing how policies work. It also covers Chrome's built-in security features, how extensions are used and deployed, and how the release cycle and channels are managed.
Topic 5	<ul style="list-style-type: none"> Analyze Chrome Data: This section of the exam measures skills of a Chrome Data Analyst and focuses on using the Google Admin console to view, analyze, and troubleshoot browser data. It includes reviewing reports, diagnosing browser or update issues, investigating performance problems, and identifying security risks based on log events and Chrome activity.

Google Professional Chrome Enterprise Administrator Certification Exam Sample Questions (Q14-Q19):

NEW QUESTION # 14

An organization has Chrome set to auto-update. The security team runs a compliance report from Chrome Enterprise Core and notices that some rarely used machines are showing an old version of Chrome. However, when an engineer logs in to these PCs and checks Chrome directly, the correct updated version appears. What is the most likely reason for this discrepancy?

- A. The machine has a different version of Chrome installed that is not managed via auto update
- B. Network setting is blocking the unattended auto-update check
- C. The display version does not update until Chrome is launched
- D. The auto-update feature is malfunctioning and not updating Chrome until it is launched

Answer: C

Explanation:

The most likely reason for this discrepancy is that the version reported in the Chrome Enterprise Core compliance report might not be updated in real-time until Chrome is actively running and checks in. When an engineer logs in and launches Chrome, it likely completes the update process and reports the correct version.

The auto-update feature generally works in the background, and a completely different unmanaged version (option C) or a persistent network block (option D) would likely prevent updates even when Chrome is launched. A malfunctioning auto-update (option A) is less likely to resolve itself upon manual launch.

NEW QUESTION # 15

The security team requires Chrome to be updated on computers that only have intranet access with no available internet connectivity. These computers cannot be restarted, and Chrome is not updating.

How can Chrome be updated?

- A. Use force relaunch after period
- B. Run auto-update.

- C. Run the Chrome installer
- D. Use a target version

Answer: C

Explanation:

For machines with no internet connectivity, automatic updates will not work. The only way to update Chrome in this scenario is to manually run the Chrome installer with an updated version obtained through an alternative method (e.g., downloaded on a connected machine and transferred). Auto-update requires internet access, setting a target version only dictates the desired version for automatic updates, and force relaunch requires an update to be downloaded first.

NEW QUESTION # 16

An administrator wants users to have the ability to install extensions of their choosing. However, due to company security policies, the administrator cannot allow any extension to be installed that has the ability to read documents on the local drive. Which policy combination best meets the administrator's need?

- A. Chrome Webstore: Allow all apps, admin manages blocklist; Runtime Blocked Hosts: C:*
- B. Chrome Webstore: Allow all apps, admin manages blocklist; Block extensions by permission: File System
- C. Chrome Webstore: Block all apps, admin manages allowlist; Block extensions by permission: Sync File System
- D. Chrome Webstore: Allow all apps, admin manages blocklist; Runtime Blocked Hosts: file:///*

Answer: B

Explanation:

To allow users to install extensions while blocking those with specific risky permissions, the administrator should "Allow all apps" from the Chrome Web Store and then use the "Block extensions by permission" policy to block extensions that request the "File System" permission. This prevents extensions from accessing local files. Option A is too restrictive by blocking all apps by default. Options B and D use "Runtime Blocked Hosts," which is for controlling access to specific websites, not for blocking extension permissions.

NEW QUESTION # 17

An organization uses Chrome Enterprise Core and needs to enforce specific security policies (e.g., disabling extensions, restricting website access) only for employee work-related browsing. Personal browsing should remain unrestricted. Which approach is most appropriate?

- A. Require a managed browser for work-related browsing, applying the policies to all browser windows
- B. Use a managed browser and set exceptions for personal use in the enterprise policies
- C. Use a single managed profile for all users, configuring separate work and personal bookmarks to manage access
- D. Require a managed profile for work-related browsing, applying the policies to only that profile

Answer: D

Explanation:

The most granular and appropriate approach to apply work-related policies without affecting personal browsing is to use ****managed profiles****. By requiring users to use a specific managed profile for work purposes, administrators can enforce policies only within that profile. Personal browsing in a separate, unmanaged profile will remain unaffected. Option A would apply policies to all browsing, which is not the requirement. Option C relies on bookmarks, which is not a security enforcement mechanism. Option D is generally not feasible as enterprise policies are designed to be enforced, and setting reliable exceptions for personal use within a managed browser is complex and less secure than using separate profiles.

NEW QUESTION # 18

In Chrome's Safe Browsing settings, which option provides the most robust protection against online threats and is suitable for a highly secure environment?

- A. Enhanced Protection
- B. Proactive Defense
- C. Secure Browsing Mode
- D. Advanced Threat Protection

Answer: A

Explanation:

Among the Safe Browsing options, ****Enhanced Protection**** offers the most robust security. It proactively checks URLs, downloads, and extensions against Google's Safe Browsing database in real time, and it can also share more data with Google to improve detection and provide personalized warnings. This level of protection is best suited for environments with high security requirements. The other options might represent different levels of Safe Browsing with varying degrees of protection.

NEW QUESTION # 19
