Google ChromeOS-Administrator VCE Dumps & Testking IT echter Test von ChromeOS-Administrator

Möchten Sie dieGoogle ChromeOS-Administrator Prüfung einmalig bestehen? It-Pruefung kann Ihren Wunsch erfüllen und Ihre beste Wahl sein. Bei uns werden wir Ihre Forderungen erfüllen. Nachdem Sie unsere Produkte von ChromeOS-Administrator Zertifizierung gekauft haben, werden wir Ihnen eine einjährige Aktualisierung versprechen. Falls Sie die ChromeOS-Administrator Prüfung leider nicht bestehen, geben wir Ihnen eine volle Rückerstattung.

Google Professional ChromeOS Administrator Exam ChromeOS-

Administrator Prüfungsfragen mit Lösungen (Q47-Q52):

47. Frage

You are tasked with converting hundreds of Windows & Mac machines across multiple locations to ChromeOS Flex and enrolling them into the Admin console. The available network bandwidth is limited at many of the locations and the devices are not currently managed with any endpoint management system.

Which two operations are required to perform the task?

Choose 2 answers

- A. Install the Recovery Tool extension on all devices that are to be converted and follow the step-by-step installer to convert each device directly without the need of USB drives
- B. Use PXE boot to load the ChromeOS Flex image onto devices and have them automatically convert across all locations after they're restarted
- C. Create a dedicated enrollment account for each location and place them into the OUs you want the devices enrolled into then enable the 'Place ChromeOS device in user organization' policy and enroll the devices using the respective enrollment account for each location
- D. Distribute USB flash drives with the ChromeOS Flex image to the different locations and ask local personnel or a services partner to manually convert each device
- E. Contact an authorized Zero-Touch Enrollment (ZTE) reseller and share the serial numbers of the devices you're converting and the domain you're enrolling them into to have them pre-provisioned into the Admin console

Antwort: C,D

Begründung:

* Create Dedicated Enrollment Accounts: Create separate enrollment accounts for each location, placing them in the respective OUs where the converted devices should be enrolled.

* Enable Policy: Turn on the "Place ChromeOS device in user organization" policy. This ensures devices are automatically enrolled into the correct OU based on the enrollment account used.

* Enroll Devices: Use the dedicated enrollment account for each location to enroll the converted devices. This allows for organized management based on location.

Option E:

* Distribute USB Drives: Prepare USB flash drives with the ChromeOS Flex image and distribute them to the different locations.

* Manual Conversion: Instruct local personnel or a service partner to manually convert each device using the provided USB drives. This method is suitable when network bandwidth is limited and doesn't rely on existing endpoint management infrastructure.

Reasons for not choosing other options:

* Option B: The Recovery Tool is primarily used for creating recovery media for ChromeOS devices, not converting other operating systems.

* Option C: PXE boot is a network-based installation method, not ideal for locations with limited bandwidth.

* Option D: While zero-touch enrollment (ZTE) streamlines enrollment, it requires pre-provisioning devices with the vendor or reseller, which might not be feasible in this scenario.

By combining options A and E, you can efficiently convert and enroll devices in multiple locations with limited network resources and no existing management systems.

48. Frage

To use Verified Access in your organization, you need to have a Chrome extension that calls Verified Access API on the client devices. Where can you go to get this extension?

- A. Google Play Store
- B. Independent software vendor (ISV) repository
- C. Software API Key store
- D. Independent software vendor (ISV) or Google Verified Access API

Antwort: D

Begründung:

Verified Access requires a Chrome extension to communicate with the Verified Access API. While Google doesn't directly provide this extension, it offers detailed documentation and resources through the Verified Access API. Independent software vendors (ISVs) can use these resources to develop and provide compatible extensions.

Option A is incorrect because Google Play Store is for Android apps, not Chrome extensions.

Option C is incorrect because while ISVs might offer extensions, it's not the sole source. Google's documentation is essential.

Option D is incorrect because API keys are for authentication, not the extension itself.

49. Frage

An organization has created organization units within the Google Admin console for additional management structure. What is the most effective way to manage each OU while not affecting the top-level OU policy?

- **A. Override the inheritance for a given policy**
- B. Delete sublevel OUs and only work from the top level OU
- C. Force inheritance from top level OU to all OUs
- D. Disable auto updates

Antwort: A

Begründung:

To apply specific settings to a sub-OU without affecting the parent OU or top-level policy, you should override the inheritance for that particular policy. This approach ensures that the sub-OU has customized settings while the parent OU policies remain intact.

Verified Answer from Official Source:

The correct answer is verified from the Google Admin Console OU Management Guide, which recommends overriding inherited policies for specific OUs when unique settings are required.

"To apply distinct settings to an OU without affecting higher-level OUs, override the inherited settings. This approach keeps parent policies intact." Overriding inheritance is essential for managing diverse device groups within large organizations, allowing flexibility in policy application.

Objectives:

- * Customize OU settings efficiently.
- * Maintain organizational policy consistency.

50. Frage

How many copies of ChromeOS does a ChromeOS device maintain at any given time?

- A. 0
- **B. 1**
- C. 2
- D. 3

Antwort: B

Begründung:

ChromeOS maintains two copies of the operating system on the device: the current version and a backup version. This dual-system setup ensures that if an update fails or becomes corrupted, the device can fall back to the previous working version.

Verified Answer from Official Source:

The correct answer is verified from the ChromeOS Update Management Guide, where it clearly states that ChromeOS devices store two versions to facilitate seamless updates and quick rollbacks if needed.

"ChromeOS devices store two versions of the OS. During an update, the new version is applied to the inactive slot while the current version remains active." This redundancy allows ChromeOS to switch between versions without requiring a full system reinstall, maintaining uptime and stability.

Objectives:

- * Understand OS redundancy for stability.
- * Implement update management effectively.

51. Frage

You are asked why ChromeOS devices do not require additional antivirus software. How should you respond?

- A. Every time ChromeOS updates, it automatically updates the antivirus software on the device
- B. The Admin console automatically deploys antivirus software to enrolled ChromeOS devices and is included in the Chrome Enterprise/Education Upgrade
- **C. As part of a multi-layered security approach ChromeOS uses a read-only operating system which cannot be affected by viruses**

- D. Every ChromeOS device is pre-installed with antivirus software which automatically updates during the life of the device

Antwort: C

Begründung:

ChromeOS is designed with multiple layers of security to protect against malware and viruses:

- * Read-only file system: Most of the operating system is stored in a read-only partition, making it difficult for malware to modify critical files.
- * Verified boot: Ensures the integrity of the operating system during bootup, preventing tampering by unauthorized software.
- * Sandboxing: Isolates different processes and websites, limiting the potential damage of any malware that manages to get through.
- * Automatic updates: Regularly delivers security patches and updates to address vulnerabilities.

While ChromeOS doesn't come with traditional antivirus software, its built-in security features provide robust protection against most threats.

52. Frage

.....

It-Pruefung ist eine Website, die den Kandidaten, die sich an den Google ChromeOS-Administrator IT-Zertifizierungsprüfungen beteiligen, Bequemlichkeiten bietet. Viele Kandidaten, die Produkte von It-Pruefung benutzt haben, haben die IT-Zertifizierungsprüfung einmalig bestanden. Ihre Feedbacks haben gezeigt, dass die Hilfe von It-Pruefung sehr wirksam ist. Das Expertenteam von It-Pruefung setzt sich aus den erfahrungsreichen IT-Experten zusammen. Sie bearbeiten nach ihren Fachkenntnissen und Erfahrungen die Schulungsunterlagen zur Google ChromeOS-Administrator Zertifizierungsprüfung. Die Schulungsunterlagen werden Ihnen sicher viel Hilfe leisten. Die Simulationssoftware und Fragen zur Google ChromeOS-Administrator Zertifizierungsprüfung werden nach dem Prüfungsprogramm zielgerichtet bearbeitet. Sie werden Ihnen sicher helfen, die Google ChromeOS-Administrator Zertifizierungsprüfung zum ersten Mal zu bestehen.
