## Useful New ChromeOS-Administrator Test Duration Supply you Realistic Latest Training for ChromeOS-Administrator: Professional ChromeOS Administrator Exam to Prepare casually

The PremiumVCEDump is one of the top-rated and renowned platforms that have been offering real and valid Professional ChromeOS Administrator Exam (ChromeOS-Administrator) practice test questions for many years. During this long time period countless Professional ChromeOS Administrator Exam (ChromeOS-Administrator) exam candidates have passed their dream Professional ChromeOS Administrator Exam (ChromeOS-Administrator) certification exam and they are now certified Google professionals and pursuing a rewarding career in the market.

## Google Professional ChromeOS Administrator Exam Sample Questions (Q114-Q119):

### NEW QUESTION # 114

What is a feature of Verified Boot?

- A. Protects anonymous guests from using the device
- B. Prevents the user from accessing unauthorized websites
- C. Makes sure that the firmware and OS have not been tampered with
- D. Eliminates the need for strict policy controls

**Answer: C**

Explanation:

Verified Boot is a security feature in ChromeOS that ensures the integrity of the operating system every time the device starts. It checks the OS for modifications or corruptions, preventing tampered systems from booting and automatically repairing them if necessary.

Verified Answer from Official Source:

The correct answer is verified from the ChromeOS Security Guide, which highlights Verified Boot as a core feature for maintaining the OS's integrity.

"Verified Boot ensures that the firmware and OS on ChromeOS devices have not been tampered with. If an anomaly is detected, the system reverts to a known good state." This feature is crucial for protecting the system from malicious software or unauthorized changes, maintaining the device's security posture.

Objectives:

- \* Enhance device security through integrity checks.
- \* Understand ChromeOS boot protection mechanisms.

### NEW QUESTION # 115

A customer deploys a large number of ChromeOS devices and would like to start the process of turning on Zero-Touch Enrollment (ZTE) to streamline their deployment process. As an administrator, what would be required to enable ZTE?

- A. Identify OU to place devices during enrollment
- B. Grant partner admin access
- C. Create a zero-touch token
- **D. Create a pre-provisioning token**

**Answer: D**

Explanation:

To enable Zero-Touch Enrollment (ZTE) for ChromeOS devices, an administrator must first create a pre-provisioning token. This token allows devices to automatically enroll when they are first powered on and connected to the internet. The pre-provisioning token links the device to the correct organization and management policies.

Verified Answer from Official Source:

The correct answer is verified from the Google Zero-Touch Enrollment Guide, which outlines the process of setting up pre-provisioning tokens for automated enrollment.

"To set up Zero-Touch Enrollment, generate a pre-provisioning token in the Admin console and configure it with the device provider." Creating the token ensures that new devices are automatically configured and enrolled without manual intervention, saving time during mass deployments.

Objectives:

- \* Automate ChromeOS device enrollment.
- \* Simplify large-scale deployments.

### NEW QUESTION # 116

A ChromeOS Administrator has deployed ChromeOS devices in their organization. How can the company evaluate the compatibility with future updates following Google's best practices while still gaining access to new features when they launch?

- A. Set the entire fleet to update in accordance with the "Long-term Support (LTS) channel"
- B. Disable "Auto Updates" on all devices and let the admin test the newest release on the "Stable channel" on their own device before rolling it out organization-wide
- C. Set 5% of the organization across several departments on the "Beta channel", and configure the rest of the fleet to receive auto updates on the "Stable channel"
- **D. Enable "Auto Updates" on all devices on the 'Stable channel', but let the employees in the IT department run their devices on the 'Beta channel' so they have time to evaluate and adapt the environment to each update before it reaches Stable**

**Answer: D**

Explanation:

This approach balances access to new features with controlled testing. Here's how it works:

\* Stable Channel: Most devices receive automatic updates on the Stable channel, ensuring security and stability for the majority of users.

\* Beta Channel: IT staff use the Beta channel to access updates earlier, allowing them to identify and address potential issues before they affect the entire organization.

\* Evaluation and Adaptation: IT staff can test compatibility, adjust configurations, and prepare for broader deployment based on their experience with the Beta channel.

Option B is incorrect because disabling auto-updates compromises security and delays access to new features.

Option C is incorrect because while a small beta group is useful, it might not be enough to cover all potential issues.

Option D is incorrect because the LTS channel focuses on stability, not early access to new features.

### NEW QUESTION # 117

You are enrolling several devices to send to a remote location. How can you ensure that these devices will automatically connect to the wireless network at the remote location when powered on for the first time?

- A. Add the wireless network credentials to the "Networks" section in the Admin console ensuring that they are applied to the ChromeOS devices By Device
- B. Use the Google Zero-Touch Enrollment (ZTE) process and generate the provisioning token by clicking on the 'Enroll device' button in the Admin console "Devices" page
- C. During the enrollment process add the wireless credentials manually to each device in the Admin console ensuring that they are applied to ChromeOS devices By User
- D. Add the wireless network credentials to the 'Networks' section in the Admin console ensuring that they are applied to the ChromeOS devices By User

**Answer: A**

Explanation:

To ensure ChromeOS devices automatically connect to a specific wireless network upon initial power-on at a remote location, follow these steps in the Google Admin console:

\* Navigate to Device Management > Chrome Management > Networks.

\* Add the Wi-Fi network credentials (SSID and password) to the list of networks.

\* Set the network configuration to apply By Device. This ensures that the credentials are pushed to the device itself, not tied to a specific user.

When the devices are powered on at the remote location, they will automatically detect and connect to the configured Wi-Fi network without requiring any manual intervention from the user.

Option B (Zero-Touch Enrollment) simplifies the initial setup process but doesn't automatically configure Wi-Fi.

Options C and D are incorrect because applying network settings by user won't ensure automatic connection on first boot before any user logs in.

### NEW QUESTION # 118

You're in charge of deploying video conferencing equipment and it has been decided that you will leverage ChromeOS devices. What initial considerations should you make when deciding on devices?

- A. A precise time window on how to apply security patches and updates to all devices
- B. Devices must have 8GB of RAM and obey supported processor models
- C. Deploying instructional guides to all users on setup configuration, and use of new equipment
- D. A form factor compatible for both remote and site workers is required

**Answer: D**

### NEW QUESTION # 119

.....

Google certification ChromeOS-Administrator exam is a test of IT professional knowledge. PremiumVCEDump is a website which can help you quickly pass Google certification ChromeOS-Administrator exams. In order to pass Google certification ChromeOS-Administrator exam, many people who attend Google certification ChromeOS-Administrator exam have spent a lot of time and effort, or spend a lot of money to participate in the cram school. PremiumVCEDump is able to let you need to spend less time, money and effort to prepare for Google Certification ChromeOS-Administrator Exam, which will offer you a targeted training. You only need about 20 hours training to pass the exam successfully.
