Our Google ChromeOS-Administrator exam questions preparation products help you know your weaknesses before the actual Professional ChromeOS Administrator Exam exam. Google ChromeOS-Administrator Exam Questions preparation materials are affordable for everyone. Moreover, we give you free updates for 365 days. TestsDumps offers reliable, updated Google Exam Questions at an affordable price and also gives a 30% discount on all Google exam questions.

Google Professional ChromeOS Administrator Exam Sample Questions (Q92-Q97):

NEW QUESTION # 92

You are using a third-party service for SSO. Users are confused when signing onto a Chrome device because they are asked for Google account details before being redirected to the sign-in screen for your SSO provider. Which setting must be changed so managed devices open the SSO provider login page by default?

- A. SAML single sign-on login frequency
- B. SAML single sign-on password synchronization flows
- C. Single sign-on cookie behavior
- **D. Single sign-on IdP redirection**

Answer: D

Explanation:

The Single sign-on IdP redirection setting controls whether managed devices directly open the login page of the third-party SSO provider (Identity Provider) or first prompt for Google account credentials. By enabling this setting, you streamline the login process for users and eliminate the confusion caused by the extra Google account prompt.

Option A is incorrect because it controls the frequency of re-authentication for SAML SSO, not the initial login page.

Option B is incorrect because it relates to password synchronization between Google and the IdP, not the login page redirection.

Option C is incorrect because it deals with how cookies are handled for SSO, not the login page redirection.

NEW QUESTION # 93

Your team has members that work remotely. Your CTO would like to verify that your fleet of ChromeOS devices remains managed by corporate policy even after a device wipe. What would you configure to complete this objective?

- **A. Set up the Admin console to force the device to automatically re-enroll after wiping**
- B. Set the setting "Powerwash" to "Do not allow powerwash to be triggered"
- C. Edit the setting "Verified Access" to "Require verified mode for boot for verified access"
- D. Create strict password rules

Answer: A

Explanation:

To ensure that ChromeOS devices remain managed after a wipe, you need to enable forced re-enrollment.

This setting automatically re-enrolls the device into the management domain after it has been wiped (Powerwashed). This feature is crucial for organizations that manage devices remotely, as it prevents unauthorized users from removing management settings.

Verified Answer from Official Source:

The correct answer is verified from the Google ChromeOS Device Management Best Practices Guide, which recommends enabling forced re-enrollment to maintain device management continuity.

"To ensure devices remain managed after wiping, enable the 'Forced Re-enrollment' policy in the Admin console. This setting ensures automatic re-enrollment upon startup." Forced re-enrollment prevents the loss of device management, which is essential for maintaining security and policy compliance, especially in remote or dispersed environments.

Objectives:

- * Enforce device management after Powerwash.
- * Maintain compliance in remote work environments.

NEW QUESTION # 94

You're in charge of deploying video conferencing equipment and it has been decided that you will leverage ChromeOS devices. What initial considerations should you make when deciding on devices?

- **A. A form factor compatible for both remote and site workers is required**
- B. Deploying instructional guides to all users on setup configuration, and use of new equipment
- C. Devices must have 8GB of RAM and obey supported processor models
- D. A precise time window on how to apply security patches and updates to all devices

Answer: A

Explanation:

When deploying video conferencing equipment using ChromeOS devices, the primary consideration is choosing a form factor (device type) that caters to both remote and on-site workers. This ensures flexibility and consistent user experience regardless of

location.

Option A is incorrect because while instructional guides are helpful, they are a secondary concern to device suitability.

Option C is incorrect because security patch timing is important but not the initial consideration when choosing devices.

Option D is incorrect because while specifications matter, they should align with the chosen form factor and user needs.

NEW QUESTION # 95

You are a ChromeOS Administrator of a school district. While working with a teacher in one of the schools, they mention they are having issues downloading files on their ChromeOS device. What are some ways you can help troubleshoot with the least amount of disruption to the user?

- A. Check how much storage is being used on the device then delete or move files that aren't needed anymore
- B. Run Diagnostics from the ChromeOS device to troubleshoot
- C. Check for system updates. If any updates are available, install them.
- D. Reset the user's ChromeOS device to its original factory settings.

Answer: A

Explanation:

When a teacher is having issues downloading files on their ChromeOS device, it's important to troubleshoot with minimal disruption. Here are steps to address the issue:

* Check Storage: Start by checking the available storage on the device. If the storage is full or nearly full, it could prevent new files from being downloaded.

* Manage Files: Guide the teacher to delete or move files that are no longer needed. This can be done through the Files app on the ChromeOS device.

* Clear Cache: If storage isn't the issue, clearing the browser cache can sometimes resolve download problems.

* Check Network: Ensure that the device has a stable internet connection, as an unstable connection can

* interrupt downloads.

References: The troubleshooting steps are based on common practices for resolving download issues on ChromeOS devices and Google's support documentation on fixing file download errors¹. These steps are designed to resolve issues without causing significant disruption to the user's experience.

* Insufficient Storage: A common reason for download failures on ChromeOS devices is insufficient storage space. Checking the available storage is a simple first step:

* Click on the system tray (bottom right corner) and select the Settings gear icon.

* In the Settings menu, navigate to the "Device" section and select "Storage Management."

* Review the storage usage. If it's nearly full, identify large files or unused apps that can be removed.

* Guide the teacher on how to delete files or move them to Google Drive.

* System Updates: Outdated software can sometimes lead to bugs or glitches. Ensuring the ChromeOS device is up-to-date is important:

* In the Settings menu, navigate to the "About ChromeOS" section.

* Click on "Check for updates." If any updates are found, install them.

* If updates are pending, ask the teacher to restart the device after the installation.

* Additional Troubleshooting (If necessary):

* Check Network Connectivity: Ensure the device is connected to a stable Wi-Fi network. Have the teacher try accessing a different website to verify internet access.

* Clear Browser Cache: In the Chrome browser, open the Settings menu, navigate to "Privacy and security," and select "Clear browsing data." Clear the cache for the past hour or day.

Why Other Options Are Less Ideal:

* A. Run Diagnostics: While diagnostics can be helpful, they are a more time-consuming step and might not be necessary if the issue is simply related to storage or updates.

* C. Reset the Device: This is a drastic measure that should only be considered if other troubleshooting steps fail. It involves wiping the user's data and settings, which is disruptive.

NEW QUESTION # 96

You want to restrict who can sign in to a managed device during working hours. Which two settings do you need to use?

Choose 2 answers

- A. Family Link accounts
- B. User Data (Ephemera))

- C. Single sign-on IdP redirection
- D. Device off hours

Answer: A,D

Explanation:

* Device off hours: This setting allows you to specify times when the device cannot be used, effectively restricting access to certain hours.

* Family Link accounts: Family Link is a parental control app that allows you to manage a child's account and device usage. By requiring Family Link accounts, you can enforce sign-in restrictions for younger users.

Other options are incorrect because:

* A: Single sign-on (SSO) redirection simplifies sign-in for authorized users, but doesn't inherently restrict access.

* C: User Data (Ephemeral) controls whether user data is saved locally, but doesn't restrict sign-in.

NEW QUESTION # 97

.....

We guarantee that after purchasing our ChromeOS-Administrator exam torrent, we will deliver the product to you as soon as possible within ten minutes. So you don't need to wait for a long time and worry about the delivery time or any delay. We will transfer our Professional ChromeOS Administrator Exam prep torrent to you online immediately, and this service is also the reason why our ChromeOS-Administrator test braindumps can win people's heart and mind. Moreover if you are not willing to continue our ChromeOS-Administrator Test Braindumps service, we would delete all your information instantly without doubt. The main reason why we try our best to protect our customers' privacy is that we put a high value on the reliable relationship and mutual reliance to create a sustainable business pattern.
