CIPP-US Antworten - CIPP-US Buch

Wir ZertPruefung bieten Ihnen die umfassendsten IAPP CIPP-US Dumps mit sehr hoher Hit-Rate. Und alle Probleme, die vielleicht in aktuellen Prüfungen sind in Dumps vorhanden. Und wir aktualisieren unsere Dumps nach der Veränderung der Prüfungsinhalte. Es kann den sinnlosen Zeitaufwand vermeiden und Ihnen helfen, leichter und hocheffektiver die IAPP CIPP-US Prüfung zu bestehen. Obwohl Sie die IAPP CIPP-US Prüfung nicht bestehen, geben wir Ihnen voll Geld zurück. Deshalb können Sie keinen Verlust haben. Die Chance ist für die Leute, die gut bereit sind. Wir hoffen, dass Sie keine gut Chance verlieren.

Die CIPP-US-Prüfung umfasst eine Vielzahl von Themen im Zusammenhang mit Datenschutzgesetzen und -vorschriften, einschließlich Datenschutz, Datenschutzmanagement, Informationssicherheit und Compliance. Sie ist darauf ausgelegt, das Wissen und die Fähigkeiten von Personen zu testen, die im Bereich Datenschutz tätig sind, einschließlich Datenschutzbeauftragten, Rechtsanwälten und Informationssicherheitsfachleuten.

IAPP Certified Information Privacy Professional/United States (CIPP/US) CIPP-US Prüfungsfragen mit Lösungen (Q42-Q47):

42. Frage

SCENARIO

Please use the following to answer the next QUESTION:

Matt went into his son's bedroom one evening and found him stretched out on his bed typing on his laptop.

"Doing your network?" Matt asked hopefully.

"No," the boy said. "I'm filling out a survey."

Matt looked over his son's shoulder at his computer screen. "What kind of survey?" "It's asking Questions about my opinions."

"Let me see," Matt said, and began reading the list of Questions that his son had already answered. "It's asking your opinions about the government and citizenship. That's a little odd. You're only ten." Matt wondered how the web link to the survey had ended up in his son's email inbox. Thinking the message might have been sent to his son by mistake he opened it and read it. It had come from an entity called the Leadership Project, and the content and the graphics indicated that it was intended for children. As Matt read further he learned that kids who took the survey were automatically registered in a contest to win the first book in a series about famous leaders.

To Matt, this clearly seemed like a marketing ploy to solicit goods and services to children. He asked his son if he had been prompted to give information about himself in order to take the survey. His son told him he had been asked to give his name, address, telephone number, and date of birth, and to answer Questions about his favorite games and toys.

Matt was concerned. He doubted if it was legal for the marketer to collect information from his son in the way that it was. Then he noticed several other commercial emails from marketers advertising products for children in his son's inbox, and he decided it was time to report the incident to the proper authorities.

Based on the incident, the FTC's enforcement actions against the marketer would most likely include what violation?

- A. Failing to notify of a breach of children's private information.
- B. Disregarding the privacy policy of the children's marketing industry.
- C. Intruding upon the privacy of a family with young children.
- **D. Collecting information from a child under the age of thirteen.**

Antwort: D

Begründung:

Based on the incident, the FTC's enforcement actions against the marketer would most likely include the violation of collecting information from a child under the age of thirteen without obtaining verifiable parental consent, as required by the Children's Online Privacy Protection Act (COPPA) Rule. The COPPA Rule applies to operators of commercial websites and online services (including mobile apps) that collect, use, or disclose personal information from children under 13, and operators of general audience websites or online services that have actual knowledge that they are collecting, using, or disclosing personal information from children under 13. The COPPA Rule also applies to websites or online services that are directed to children under 13 and that collect personal information from users of any age. The COPPA Rule defines personal information to include full name, address, phone number, email address, date of birth, and other identifiers that permit the physical or online contacting of a specific individual. The COPPA Rule requires operators to post a clear and comprehensive online privacy policy describing their information practices for personal information collected online from children; provide direct notice to parents and obtain verifiable parental consent, with limited exceptions, before collecting personal information online from children; give parents the choice of consenting to the operator's collection and internal use of a child's information, but prohibiting the operator from disclosing that information to third parties (unless disclosure is integral to the site or service, in which case, this must be made clear to parents); provide parents access to their child's personal information to review and/or have the information deleted; give parents the opportunity to prevent further use or online collection of a child's personal information; maintain the confidentiality, security, and integrity of information they collect from children, including by taking reasonable steps to release such information only to parties capable of maintaining its confidentiality and security; and retain personal information collected online from a child for only as long as is necessary to fulfill the purpose for which it was collected and delete the information using reasonable measures to protect against its unauthorized access or use. The FTC has the authority to seek civil penalties and injunctive relief for violations of the COPPA Rule. The FTC has brought numerous enforcement actions against operators for violating the COPPA Rule, resulting in millions of dollars in penalties and orders to delete illegally collected data. 43. Frage

In what way is the Controlling the Assault of Non-Solicited Pornography and Marketing (CAN-SPAM) Act intended to help consumers?

- A. By providing consumers with free spam-filtering software.
- B. By requiring a company to receive an opt-in before sending any advertising e-mails.
- **C. By requiring companies to allow consumers to opt-out of future e-mails.**
- D. By prohibiting companies from sending objectionable content through unsolicited e-mails.

Antwort: C

44. Frage

Which of the following is NOT a principle found in the APEC Privacy Framework?

- A. Preventing Harm
- B. Integrity of Personal Information
- C. Access and Correction
- **D. Privacy by Design.**

Antwort: D

Begründung:

The APEC Privacy Framework is a set of non-binding principles adopted by the Asia-Pacific Economic Cooperation (APEC) that aim to promote electronic commerce and protect information privacy in the region.

The Framework is consistent with the core values of the OECD Guidelines on the Protection of Privacy and Trans-Border Flows of Personal Data, and reaffirms the value of privacy to individuals and to the information society. The Framework consists of nine principles: Preventing Harm, Notice, Collection Limitation, Use of Personal Information, Choice, Integrity of Personal Information, Security Safeguards, Access and Correction, and Accountability. Privacy by Design is not one of the principles in the APEC Privacy Framework, although it is a concept that is endorsed by the OECD Guidelines and other privacy frameworks. 45. Frage

What does the Massachusetts Personal Information Security Regulation require as it relates to encryption of personal information?

- **A. The encryption of all personal information of Massachusetts residents when stored on portable devices.**
- B. The encryption of personal information stored in Massachusetts-based companies when stored on portable devices.
- C. The encryption of all personal information of Massachusetts residents when all equipment is located in Massachusetts.
- D. The encryption of all personal information stored in Massachusetts-based companies when all equipment is located in Massachusetts.

Antwort: A

Begründung:

The Massachusetts Personal Information Security Regulation (201 CMR 17.00) requires that any person or entity that owns or licenses personal information of Massachusetts residents must implement and maintain a comprehensive written information security program that includes administrative, technical, and physical safeguards to protect such information. One of the technical requirements of the regulation is to encrypt all personal information of Massachusetts residents that is stored on laptops or other portable devices, regardless of where the equipment is located¹². The regulation defines personal information as a person's first name and last name or first initial and last name in combination with any one or more of the following data elements that relate to such person: (a) Social Security number; (b) driver's license number or state-issued identification card number; or financial account number, or credit or debit card number, with or without any required security code, access code, personal identification number or password, that would permit access to a resident's financial account¹. The regulation also requires encryption of all transmitted records and files containing personal information that will travel across public networks, and encryption of all data containing personal information to be transmitted wirelessly¹. 46. Frage

Privacy Is Hiring Inc., a CA-based company, is an online specialty recruiting firm focusing on placing privacy professionals in roles at major companies. Job candidates create online profiles outlining their experience and credentials, and can pay \$19.99/month via credit card to have their profiles promoted to potential employers. Privacy Is Hiring Inc. keeps all customer data at rest encrypted on its servers.

Under what circumstances would Privacy Is Hiring Inc., need to notify affected individuals in the event of a data breach?

- **A. If the job candidates' credit card information and the encryption keys were among the information taken.**
- B. If Privacy Is Hiring Inc., reasonably believes that job candidates will be harmed by the data breach.
- C. If law enforcement has completed its investigation and has authorized Privacy Is Hiring Inc. to provide the notification to clients and applicable regulators.
- D. If the personal information stolen included the individuals' names and credit card pin numbers.

Antwort: A

Begründung:

Under the California Consumer Privacy Act (CCPA), a business that collects personal information of California residents must notify them of a data breach if their personal information is subject to unauthorized access and exfiltration, theft, or disclosure as a result of the business's violation of the duty to implement and maintain reasonable security procedures and practices. However, the CCPA excludes encrypted or redacted personal information from the definition of personal information, unless the encryption key or security credential is also compromised. Therefore, Privacy Is Hiring Inc. would need to notify the affected individuals only if the encryption keys were also taken along with the credit card information, as this would render the encryption ineffective and expose the personal information to unauthorized access. The other options are not relevant to the CCPA notification requirement, although they may be relevant to other laws or best practices.
