With the rising demand for ServiceNow solutions worldwide, becoming a certified CIS-Discovery Implementation Specialist can open up many career opportunities for IT professionals.

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q48-Q53):

NEW QUESTION # 48

Which of the following executes the osquery commands on agents to gather attribute details from a CI?

- A. Policies
- B. ACC for Discovery
- C. Agent listener
- **D. Agent Collector**
- E. Check Definitions

Answer: D

Explanation:

Agent Collector is the component that executes the osquery commands on agents to gather attribute details from a CI. Agent Collector is a feature of the Agent Client Collector (ACC) for Discovery, which is an integration that enables ServiceNow Discovery to use osquery to collect data from Linux and Windows devices that have the Elastic Agent installed¹. Agent Collector allows you to define osquery queries and assign them to policies that target specific devices or groups of devices². Agent Collector then runs the queries on the agents and sends the results back to the instance, where they are processed by the Agent Listener and stored in the CMDB³.

NEW QUESTION # 49

What commands can be used to verify if powershell is installed on a windows machine?

Response:

- **A. \$PSVersionTable**
- **B. powershell**
- C. ps -v
- D. ps -version

Answer: A,B

NEW QUESTION # 50

For a pattern operation, which of the below choices could be a valid replacement for <_>? (Choose three.)

\$IfTable<_>.InstanceID

- **A. [&]**
- **B. [*]**
- C. [X]
- D. [.]
- **E. []**
- F. [3]

Answer: A,B,E

NEW QUESTION # 51

Shazzam probe payload is controlled by.

Response:

- A. Configuration parameters
- B. Probe parameters
- C. UI properties
- D. MID Server properties

Answer: D

NEW QUESTION # 52

What is found on the far-right section of the Pattern Designer for horizontal patterns? (Choose two.)

- A. CI Attributes
- B. Temporary Variables
- C. Operations
- D. CMDB Dashboard

Answer: A,B

Explanation:

The Pattern Designer is a graphical tool that allows users to create and edit horizontal discovery patterns. The Pattern Designer has three main sections: the left section shows the CI type and the pattern type, the middle section shows the pattern steps and the flow diagram, and the far-right section shows the details of the selected step or operation. The far-right section can display the following tabs, depending on the type of step or operation selected¹²:

* Operations: This tab shows the list of available operations that can be added to the pattern, such as Execute Command, Parse File, Set Parameter Value, etc. Operations are the basic building blocks of a pattern that perform specific actions on the target device or the MID Server.

* CI Attributes: This tab shows the list of attributes that can be set or updated for the CI type of the pattern, such as name, serial number, manufacturer, etc. CI attributes are used to populate the CI record in the CMDB with the information collected by the pattern.

* Temporary Variables: This tab shows the list of temporary variables that can be created or used by the pattern, such as \$result, \$output, \$user_var, etc. Temporary variables are used to store and manipulate data within the pattern, such as the output of a command, the value of a parameter, or the result of a calculation.

* CMDB Dashboard: This tab shows the CMDB dashboard that displays the CI record and its related lists, such as relationships, identification rules, sensors, etc. The CMDB dashboard is used to preview and verify the outcome of the pattern on the CI record in the CMDB.
