CIS-Discovery Exam Testking & Valid CIS-Discovery Exam Format

Exams-boost can promise that our CIS-Discovery training material have a higher quality when compared with other study materials.

With over a decade's business experience, our CIS-Discovery study tool has attached great importance to customers' purchasing rights all along. The CIS-Discovery study materials of our website do not affect the user's normal working and learning, and greatly improves the utilization rate of time, killing two birds with one stone. It is no doubt that our study materials will help you pass your CIS-Discovery Exam in a shortest time.

The topics covered in the CIS-Discovery Exam include Discovery architecture, data sources, identification rules, and classifications. Candidates will also be tested on their knowledge of Discovery schedules, probes, sensors, and MID Servers. They will need to demonstrate an understanding of how Discovery integrates with other ServiceNow applications, such as CMDB and ITOM.

ServiceNow Certified Implementation Specialist - Discovery Sample Questions (Q118-Q123):

NEW QUESTION # 118
SNMP Credentials require which of the following?

- A. read community strings
- B. port 135 access
- C. usernames
- D. write community strings

Answer: A

Explanation:
SNMP credentials are used by Discovery to communicate with devices that support the Simple Network Management Protocol (SNMP). SNMP credentials do not include a user name, just a password, called the community string. The default read-only community string for many SNMP devices is public, and Discovery will try that automatically. Enter the appropriate SNMP credentials if they differ from the public community string1.

NEW QUESTION # 119
Which method is used by Discovery to determine if a Host IP is active or alive?

- A. Port Scan
- B. Ping
- C. Traceroute
- D. Classification

Answer: B

Explanation:
Discovery uses the ping method to determine if a host IP is active or alive. Ping is a network utility that sends an ICMP echo request packet to a target IP address and waits for an ICMP echo reply packet. If the target IP address responds, it means that the host is active or alive12.

NEW QUESTION # 120
What midserver parameter should be configured on the midserver record to disable the use of service credential(if all the configured credentials dont work).
Response:

- A. mid.windows.management_protocol
- B. mid.powershell.local_mia_service_crea entialiallback
- C. mid.poll.time

**Answer: B**

NEW QUESTION # 121
From an SNMP Query pattern operation, which of the choices are valid Variable Types? (Choose two.)

- A. CI Type
- B. Test
- C. Scalar
- D. Table

Answer: A,C

NEW QUESTION # 122
Which choice best represents how to modify the functionality shown in this image?

- A. From a Discovery Pattern
- B. From a Probe
- C. From the MID Server
- D. From a Classifier

Answer: A

Explanation:
The functionality shown in the image is related to the Tracked Configuration files feature of ServiceNow Discovery. This feature allows Discovery to track changes in configuration files on Windows and Unix hosts and store them as configuration items (CIs) in the CMDB1. To modify this functionality, such as adding or removing files to track, changing the file attributes to capture, or defining the CI relationships, one needs to edit the Discovery Pattern that is associated with the Tracked Configuration files classifier2. A Discovery Pattern is a series of operations that tell Discovery how to find and identify an application or a configuration file on a host3.
