Cisco 300-435 Exam Dump - 300-435 Sample Questions Pdf

PassCollection Automating and Programming Cisco Enterprise Solutions (300-435) practice test software is another great way to reduce your stress level when preparing for the Cisco Exam Questions. With our software, you can practice your excellence and improve your competence on the Automating and Programming Cisco Enterprise Solutions (300-435) exam dumps. Each Cisco 300-435 practice exam, composed of numerous skills, can be measured by the same model used by real examiners.

Cisco 300-435 exam is a certification test that evaluates the automation and programming skills of candidates in Cisco enterprise solutions. 300-435 exam is designed for network engineers, software developers, and other IT professionals who have experience in automating and programming Cisco networks. Passing 300-435 Exam is essential for individuals who want to obtain the CCNP Enterprise certification.

Cisco Automating and Programming Cisco Enterprise Solutions Sample Questions (Q44-Q49):

NEW QUESTION # 44

```
{
  'data':
  [
    {
      'availableVersions': []
      'chassisNumber': '4af9e049-0052-47e9-83af-81a5825f7ffe',
      'deviceIP': '4.4.4.60',
      'deviceModel': 'vedge-cloud',
      'deviceType': 'vedge',
      'host-name': 'vedge01',
      ...
    }
  ]
}
```

Refer to the exhibit. A Python script has been created that calls the Cisco SD-WAN vManage Device Inventory API to get the list of vEdges. The JSON data that returns to a Python dictionary has been converted and assigned to a variable named "d". A portion of the JSON is shown in the exhibit. Which code will complete the expression `hostname=` to access the hostname?

- A. `d[data][0][host-name]`
- B. `d("data")[0]("host-name")`
- C. `d["host-name"]["data"]{'0'}`
- D. `d["data"][0]["host-name"]`

Answer: D

Explanation:

Section: Cisco SD-WAN

Explanation:

The double-quotations are a necessary syntax of Python. And for the json portion doesnt use parentheses. It always uses brackets. `d["data"][0]["host-name"]` is the only logical answer.

NEW QUESTION # 45

Refer to the exhibit.

```
- name: Create VRFs as defined by local_vrfs
  ios_vrf:
    vrfs: "{{ local_vrfs }}"
    state: 
  register: addvrf
```

An engineer creates an Ansible playbook to configure VRF information using a `local_vrfs` variable. The code must be completed so that it can be tested. Which string completes the code?

- A. on
- B. up
- C. present
- D. active

Answer: C

Explanation:

In Ansible, the state parameter is used to define the desired state of a resource on the remote device. The options typically include "present" or "absent," indicating whether the resource should exist or not. In this context, "present" is used to ensure that the VRFs defined in the `local_vrfs` variable are configured on the target device. Therefore, the string that completes the code for configuring VRF information using a `local_vrfs` variable is "present." References: = Automating Cisco Enterprise Solutions Official Cert Guide

NEW QUESTION # 46

Refer to the exhibit.

```
telemetry ietf subscription 154
encoding encode-ttl
filter xpath /memory-ios-xe-oper:memory-statistics/memory-statistic
source-vrf Mgmt-intf
stream yang-push
update-policy periodic 6000
```

The configuration commands are entered in CLI config mode to configure a static telemetry subscription on a Cisco IOS XE device. The commands are accepted by the device, but the consumer receives no telemetry data. Which change must be made to ensure that the consumer receives the telemetry data?

- A. The update policy period must be shortened.
- B. The stream type must be set to YANG.
- C. The sender IP address must be set.
- **D. The IP address of the receiver must be set.**

Answer: D

Explanation:

To ensure that the consumer receives the telemetry data, it is crucial to define the destination where the telemetry data should be sent. This is accomplished by configuring the IP address of the receiver. Without this information, even if the Cisco IOS XE device accepts the configuration commands for a static telemetry subscription, it will not know the destination for the data, resulting in the consumer not receiving any telemetry data. NEW QUESTION # 47

In which direction does the Cisco DNA Center Intent API communicate?

- **A. northbound**
- B. eastbound
- C. southbound
- D. westbound

Answer: A

Explanation:

The Intent API is a Northbound REST API that exposes specific capabilities of the Cisco DNA Center platform. The Intent API provides policy-based abstraction of business intent, allowing focus on an outcome rather than struggling with individual mechanisms steps. The RESTful Cisco DNA Center Intent API uses HTTPS verbs (GET, POST, PUT, and DELETE) with JSON structures to discover and control the network.

NEW QUESTION # 48

Refer to the exhibit.

```
<rpc message-id="101" xmlns="urn:ietf:params:xml:ns:netconf:base:1.0">
  <establish-subscription
    xmlns="urn:ietf:params:xml:ns:yang:ietf-event-notifications"
    xmlns:yp="urn:ietf:params:xml:ns:yang:ietf-yang-push">
    <stream>yp:yang-push</stream>
    <yp:xpath-filter>/mdt-oper:mdt-oper-data/mdt-subscriptions</yp:xpath-filter>
    <yp: <input> >1000</yp: <input> >
  </establish-subscription>
</rpc>
```

Which XML tag completes this NETCONF telemetry subscription with a Cisco IOS XE device?

- A. frequency
- B. cadence
- **C. period**
- D. crontab

Answer: C

NEW QUESTION # 49
