NEW QUESTION # 195

DISA's role in cloud security architecture involves:

- A. Ensuring cloud services are accessible worldwide
- B. Providing entertainment services
- C. Setting standards for defense-related IT and cybersecurity
- D. Managing cloud storage solutions

Answer: C

NEW QUESTION # 196

A Web Application Firewall (WAF) is primarily used for:

- A. Filtering email spam
- B. Accelerating website performance
- C. Protecting web applications from attacks such as SQL injection and XSS
- D. Managing website content

Answer: C

NEW QUESTION # 197

Which common strategy should be used to mitigate directory traversal attacks in a cloud environment?

- A. Use anti-cross-site request forgery tokens.
- B. Implement functionality validation.
- C. Apply the principle of least privilege.
- D. Limit file system permissions.

Answer: D

Explanation:

Directory traversal attacks exploit improper file path validations to access unauthorized directories and files.

To prevent this, it is critical to restrict what areas of the file system an application or user can access. Limiting file system permissions prevents attackers from gaining access to sensitive areas even if a traversal vulnerability exists.

As explained in SCAZT Section 4 (Application and Data Security, Pages 85-87), enforcing minimal privileges and file system segmentation is a key defense against such attacks.
