

Cisco 300-740 Simulations Pdf & 300-740 Latest Test Preparation

Introduction to Network Simulations with Cisco Modeling Labs | CMLLAB

Controller - ANS-Component responsible for deploying virtual devices and providing details about running labs.

Node and Image Definitions interface - ANS-The interface available from the Tools button that provides details on all the images currently available on a Cisco Modeling Labs installation.

REST - ANS-The type of API that Cisco Modeling Labs is built on.

Access console - ANS-Right-click on the node in the topology view and choose 'Console.'

Included nodes - ANS-Cisco IOSv, Cisco CAT 8000V, Desktop, Cisco NX-OS 9000.

Connect interfaces - ANS-Right-click on one node and choose Add Link from menu.

Change lab title - ANS-Click on the lab title at the top of the workbench to access a drop-down field.

Start lab from workbench - ANS-1) Use the Start button on the toolbar at the top 2) Click on LAB in the toolbar and click Start Lab.

Change startup configuration - ANS-Stop and wipe the node.

Wipe a lab or node - ANS-Erase the resources associated with the virtual machine for the node.

Interface types - ANS-Console and VNC.

PANES button - ANS-Workbench button used to provide access to open console or VNC connections to nodes in a simulation.

External Connector - ANS-Node type used to connect a lab simulation to the 'real network' through the Cisco Modeling Lab server's network interfaces.

Berkeley Packet Filter (BPF) - ANS-Type of filter used to restrict the packets captured on a link in Cisco Modeling Labs.

NAT mode - ANS-Mode used to configure an external connector that was being used to provide inbound management connectivity to simulated hosts.

What's more, part of that PDF4Test 300-740 dumps now are free: https://drive.google.com/open?id=14x-cyHfMDySmOzEkS_HkSfH_F4wbynG

Candidates who become Cisco 300-740 certified demonstrate their worth in the Cisco field. 300-740 certification is proof of their competence and skills. This is a highly sought after credential and it makes career advancement easier for the candidate. To become Cisco 300-740 Certified, you must pass the Designing and Implementing Secure Cloud Access for Users and Endpoints (300-740) Exam. For this task, you need actual and updated 300-740 Questions.

Cisco 300-740 Exam Syllabus Topics:

Topic	Details
Topic 1	Network and Cloud Security: This section of the exam measures skills of Network Security Engineers and covers policy design for secure access to cloud and SaaS applications. It outlines techniques like URL filtering, app control, blocking specific protocols, and using firewalls and reverse proxies. The section also addresses security controls for remote users, including VPN-based and application-based access methods, as well as policy enforcement at the network edge.

Topic 2	• Cloud Security Architecture: This section of the exam measures the skills of Cloud Security Architects and covers the fundamental components of the Cisco Security Reference Architecture. It introduces the role of threat intelligence in identifying and mitigating risks, the use of security operations tools for monitoring and response, and the mechanisms of user and device protection. It also includes strategies for securing cloud and on-premise networks, as well as safeguarding applications, workloads, and data across environments.
Topic 3	• User and Device Security: This section of the exam measures skills of Identity and Access Management Engineers and deals with authentication and access control for users and devices. It covers how to use identity certificates, enforce multifactor authentication, define endpoint posture policies, and configure single sign-on (SSO) and OIDC protocols. The section also includes the use of SAML to establish trust between devices and applications.
Topic 4	• Industry Security Frameworks: This section of the exam measures the skills of Cybersecurity Governance Professionals and introduces major industry frameworks such as NIST, CISA, and DISA. These frameworks guide best practices and compliance in designing secure systems and managing cloud environments responsibly.
Topic 5	• Visibility and Assurance: This section of the exam measures skills of Security Operations Center (SOC) Analysts and focuses on monitoring, diagnostics, and compliance. It explains the Cisco XDR solution, discusses visibility automation, and describes tools for traffic analysis and log management. The section also involves diagnosing application access issues, validating telemetry for behavior analysis, and verifying user access with tools like firewall logs, Duo, and Cisco Secure Workload.
Topic 6	• Threat Response: This section of the exam measures skills of Incident Response Engineers and focuses on responding to threats through automation and data analysis. It covers how to act based on telemetry and audit reports, manage user or application compromises, and implement response steps such as containment, reporting, remediation, and reinstating services securely.

Cisco 300-740 Realistic Simulations Pdf Pass Guaranteed

Both practice tests simulate the Cisco 300-740 real exam environment and produce results of your attempts on the spot. In this way, you will be able to not only evaluate your progress but also overcome mistakes before the 300-740 actual examination. Windows computers support the Designing and Implementing Secure Cloud Access for Users and Endpoints 300-740 desktop practice exam software. The Designing and Implementing Secure Cloud Access for Users and Endpoints 300-740 web-based practice test needs an active internet connection.

Cisco Designing and Implementing Secure Cloud Access for Users and Endpoints Sample Questions (Q97-Q102):

NEW QUESTION # 97

To effectively manage a compromised system, it's important to first _____ the threat to stop its spread.

- A. ignore
- B. broadcast
- C. amplify
- D. contain

Answer: D

NEW QUESTION # 98

When choosing a Web Application Firewall (WAF), it is important to consider its ability to:

- A. Replace traditional network firewalls
- B. Only protect against DDoS attacks

- C. Serve as the only layer of security for web applications
- D. Defend against a wide range of web application attacks, such as SQL injection and XSS

Answer: D

NEW QUESTION # 99

Microsegmentation helps in cloud security by:

- A. Centralizing all applications into a single network segment
- B. Reducing the number of security policies needed
- C. Creating secure zones in data centers and cloud environments to isolate workloads from one another
- D. Allowing unrestricted traffic flow within the cloud environment

Answer: C

NEW QUESTION # 100

Refer to the exhibit. An engineer must troubleshoot an issue with excessive SSH traffic leaving the internal network between the hours of 18:00 and 08:00. The engineer applies a policy to the Cisco ASA firewall to block outbound SSH during the indicated hours; however, the issue persists. What should be done to meet the requirement?

- A. Delete rule 4
- B. Change the time of rule 2.
- C. Delete rule 3
- D. Change the time of rule 5

Answer: C

Explanation:

Rule 3 allows all traffic (including SSH) from 10.1.0.0/30 during the hours of 18:00-08:00, which directly conflicts with Rule 1 that is intended to deny SSH at those same hours. Since firewall rules are evaluated top- down and Rule 3 allows traffic during the exact period where SSH should be blocked, deleting Rule 3 will allow Rule 1 to apply correctly.

This behavior is explained in SCAZT Section 3 (Network and Cloud Security, Pages 72-75), where rule precedence and time-based evaluation logic are discussed.

Reference: Designing and Implementing Secure Cloud Access for Users and Endpoints (SCAZT), Section 3, Pages 72-75

NEW QUESTION # 101

```
Ciscoasa# show vpn-sessiondb detail anyconnect
Username      : USER1      Public IP Index : 1
Assigned IP   : 10.1.2.3   Public IP        : 4.5.6.1
Protocol      : AnyConnect-Parent SSL-Tunnel TLS-Tunnel
License       : AnyConnect Premium
Bytes Tx      : 465106     Bytes Rx       : 395293
Pkts Tx       : 3310      Pkts Rx        : 4115
Group Policy  : PolicyAllow Tunnel Group : Employee
Login Time    : 01:41:18 CEST Mon Mar 9 2020
Duration      : 0h:17m:45s
TCP Dst Port  : 443        Auth Mod       : use password
Idle Time Out: 30 Minutes  Idle TO Left   : 10 Minutes

tunnel-group Employee webvpn-attributes
pre-fill-username ssl-client
secondary-pre-fill-username ssl-client
group-alias Employee enable
```

Refer to the exhibit. An engineer must implement a remote access VPN solution that provides user and device verification. The company uses Active Directory for user authentication and ID certificates for device identity. Users are currently able to connect using only a valid username and password, even if their computer is missing the required certificate.

Which command from the Cisco ASA tunnel-group completes the requirement of verifying device identity in addition to user identity?

- A. webvpn authorize-device
- B. authentication mfa
- C. authentication aaa certificate
- D. ldap-attribute-map PolicyAllow

Answer: C

Explanation:

To enforce both user-based and device-based authentication on Cisco ASA, the tunnel group must include the command: authentication aaa certificate. This configuration requires that both a valid username/password (authenticated via AAA, such as Active Directory) and a trusted certificate (device identity) are present before allowing VPN access. Without this directive, only username/password credentials are validated, which leads to the scenario described in the question.
