### NEW QUESTION # 232

How does a Type 1 hypervisor function?

- A. It runs on a virtual server and includes its own operating system
- B. It runs directly on a physical server and depends on a previously installed operating system
- C. It runs on a virtual server and depends on a previously installed operating systems
- D. It runs directly on a physical server and includes its own operating system**

**Answer: D**

Explanation:

A type 1 hypervisor, also known as a bare-metal or native hypervisor, runs directly on the physical server and its underlying hardware. It does not depend on a previously installed operating system, but rather includes its own operating system that is designed to run virtual machines. A type 1 hypervisor provides excellent performance and stability, as it has direct access to the hardware resources and can allocate them to the virtual machines. A type 1 hypervisor is typically used in enterprise environments, where multiple virtual machines run on a single server.

### NEW QUESTION # 233

A network administrator is designing a new network for a company that has frequent power spikes. The company wants to ensure that employees can the best solution for the administrator to recommend?

- A. Uninterruptible power supply**
- B. Cold site
- C. Generator
- D. Redundant power supplies

**Answer: A**

Explanation:

This is because an uninterruptible power supply (UPS) is a device that provides backup power to a network device or a computer in case of a power outage or a power spike. A UPS can prevent data loss, corruption, or damage to the device by providing a smooth and continuous power supply. A UPS can also protect the device from power surges, brownouts, or voltage fluctuations. The source of this answer is the Cisco ENCOR v1.1 course, module 2, lesson 2.1: Implementing Device Hardening.
