

Cisco 350-701 Exam | Online 350-701 Lab Simulation - Test Engine Simulation of Pass 350-701 Exam

P.S. Free & New 350-701 dumps are available on Google Drive shared by DumpsQuestion: <https://drive.google.com/open?id=13dpIMwrNM6m4nWGuRICJWGm9kz5VrDuy>

You should practice with DumpsQuestion Cisco 350-701 exam questions that are aligned with the latest content of the Cisco 350-701 test. DumpsQuestion Cisco 350-701 questions are designed to provide you with the knowledge essential to get certified very quickly. These Cisco exam questions remove the need for you to spend time on unnecessary or irrelevant material, allowing you to complete your 350-701 Exam Preparation swiftly.

Cisco 350-701 Certification Exam is an ideal option for security professionals who wish to enhance their career prospects and demonstrate their competency in the field of network security. Implementing and Operating Cisco Security Core Technologies certification is recognized globally and is highly respected in the industry, making it a valuable addition to any professional's resume.

Pass Cisco 350-701 Exam - Pdf Demo 350-701 Download

One of the major features provided by Cisco is that it will provide you with free Cisco 350-701 actual questions updates for 365 days after the purchase of our product. If you work hard with our Cisco 350-701 Exam Practice material, nothing can stop you from cracking the test on the first endeavor.

Cisco 350-701 SCOR: Target Audience

The Cisco 350-701 exam is created for those IT professionals who work in the networking field. The test is targeted at the engineers and architects specializing in unified communications, video, and voice. To pass this exam with flying colors, the applicants must demonstrate that they have the ability to operate and implement core security technologies, which include Cloud security, network security, secure network access, endpoint protection and detection, enforcement, and visibility. In addition, candidates should also have familiarity with TCP/IP networking and Ethernet. It is recommended that the students also have knowledge of Windows OS. In addition, they should know the fundamental concepts of networking security and possess expertise in Cisco IOS networking.

Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q220-Q225):

NEW QUESTION # 220

Which two capabilities of Integration APIs are utilized with Cisco DNA center? (Choose two)

- A. Application monitors for power utilization of devices and IoT sensors
- B. Upgrade software on switches and routers
- C. Create new SSIDs on a wireless LAN controller
- D. Automatically deploy new virtual routers
- E. Connect to Information Technology Service Management Platforms

Answer: A,E

Explanation:

Integration API (Westbound)

Integration capabilities are part of Westbound interfaces. To meet the need to scale and accelerate operations in modern data centers, IT operators require intelligent, end-to-end work flows built with open APIs. The Cisco DNA Center platform provides mechanisms for integrating Cisco DNA Assurance workflows and data with thirdparty IT Service Management (ITSM) solutions.

Integration API (Westbound)

Integration capabilities are part of Westbound interfaces. To meet the need to scale and accelerate operations in modern data centers, IT operators require intelligent, end-to-end work flows built with open APIs. The Cisco DNA Center platform provides mechanisms for integrating Cisco DNA Assurance workflows and data with thirdparty IT Service Management (ITSM) solutions.

Reference:

-> Therefore answer D is correct.

Westbound-Integration APIs

Cisco DNA Center platform can power end-to-end IT processes across the value chain by integrating various domains such as ITSM, IPAM, and reporting. By leveraging the REST-based Integration Adapter APIs, bidirectional interfaces can be built to allow the exchange of contextual information between Cisco DNA Center and the external, third-party IT systems. The westbound APIs provide the capability to publish the network data, events and notifications to the external systems and consume information in Cisco DNA Center from the connected systems.

Therefore the most suitable choice is Integration APIs can monitor for power utilization of devices and IoT sensors -> Answer C is correct.

Integration API (Westbound)

Integration capabilities are part of Westbound interfaces. To meet the need to scale and accelerate operations in modern data centers, IT operators require intelligent, end-to-end work flows built with open APIs. The Cisco DNA Center platform provides mechanisms for integrating Cisco DNA Assurance workflows and data with thirdparty IT Service Management (ITSM) solutions.

-> Therefore answer D is correct.

Westbound-Integration APIs

Cisco DNA Center platform can power end-to-end IT processes across the value chain by integrating various domains such as ITSM, IPAM, and reporting. By leveraging the REST-based Integration Adapter APIs, bidirectional interfaces can be built to allow the exchange of contextual information between Cisco DNA Center and the external, third-party IT systems. The westbound APIs provide the capability to publish the network data, events and notifications to the external systems and consume information in Cisco DNA Center from the connected systems.

Therefore the most suitable choice is Integration APIs can monitor for power utilization of devices and IoT

-> Therefore answer D is correct.

Westbound-Integration APIs

Cisco DNA Center platform can power end-to-end IT processes across the value chain by integrating various domains such as ITSM, IPAM, and reporting. By leveraging the REST-based Integration Adapter APIs, bidirectional interfaces can be built to allow the exchange of contextual information between Cisco DNA Center and the external, third-party IT systems. The westbound APIs provide the capability to publish the network data, events and notifications to the external systems and consume information in Cisco DNA Center from the connected systems.

Therefore the most suitable choice is Integration APIs can monitor for power utilization of devices and IoT sensors -> Answer C is correct.

NEW QUESTION # 221

What is a feature of Cisco NetFlow Secure Event Logging for Cisco ASAs?

- A. Multiple NetFlow collectors are supported
- B. Advanced NetFlow v9 templates and legacy v5 formatting are supported
- C. Secure NetFlow connections are optimized for Cisco Prime Infrastructure
- D. Flow-create events are delayed

Answer: D

Explanation:

Explanation Explanation The ASA and ASASM implementations of NetFlow Secure Event Logging (NSEL) provide the following major functions: ... - Delays the export of flow-create events. Reference:

<https://www.cisco.com/c/en/us/td/docs/security/asa/asa92/configuration/general/asa-general-cli/monitor-nsel.pdf> Explanation The ASA and ASASM implementations of NetFlow Secure Event Logging (NSEL) provide the following major functions:

...

- Delays the export of flow-create events.

NEW QUESTION # 222

Refer to the exhibit.

```
ip dhcp snooping
ip dhcp snooping vlan 41,44
!
interface GigabitEthernet1/0/1
 description Uplink_To_Distro_Switch_g1/0/11
 switchport trunk native vlan 999
 switchport trunk allowed vlan 40,41,44
 switchport mode trunk
```

An organization is using DHCP Snooping within their network. A user on VLAN 41 on a new switch is complaining that an IP address is not being obtained. Which command should be configured on the switch interface in order to provide the user with network connectivity?

- A. ip dhcp snooping limit 41
- **B. ip dhcp snooping trust**
- C. ip dhcp snooping verify mac-address
- D. ip dhcp snooping vlan 41

Answer: B

Explanation:

To understand DHCP spoofing we need to learn about DHCP spoofing attack first.

DHCP spoofing is a type of attack in that the attacker listens for DHCP Requests from clients and answers them with fake DHCP Response before the authorized DHCP Response comes to the clients. The fake DHCP Response often gives its IP address as the client default gateway -> all the traffic sent from the client will go through the attacker computer, the attacker becomes a "man-in-the-middle".

The attacker can have some ways to make sure its fake DHCP Response arrives first. In fact, if the attacker is "closer" than the DHCP Server then he doesn't need to do anything. Or he can DoS the DHCP Server so that it can't send the DHCP Response.

DHCP snooping can prevent DHCP spoofing attacks. DHCP snooping is a Cisco Catalyst feature that determines which switch ports can respond to DHCP requests. Ports are identified as trusted and untrusted.

Only ports that connect to an authorized DHCP server are trusted, and allowed to send all types of DHCP messages. All other ports on the switch are untrusted and can send only DHCP requests. If a DHCP response is seen on an untrusted port, the port is shut down.

The port connected to a DHCP server should be configured as trusted port with the "ip dhcp snooping trust" command. Other ports connecting to hosts are untrusted ports by default.

In this question, we need to configure the uplink to "trust" (under interface Gi1/0/1) as shown below.

NEW QUESTION # 223

Why is it important to have a patching strategy for endpoints?

- **A. so that known vulnerabilities are targeted and having a regular patch cycle reduces risks**

- B. so that functionality is increased on a faster scale when it is used
- C. so that patching strategies can assist with disabling nonsecure protocols in applications
- D. to take advantage of new features released with patches

Answer: A

NEW QUESTION # 224

What is a benefit of using Cisco CWS compared to an on-premises Cisco WSA?

- **A. Content scanning for SAAS cloud applications is available through Cisco CWS and not available through Cisco WSA**
- B. URL categories are updated more frequently on Cisco CWS than they are on Cisco WSA
- C. Cisco CWS minimizes the load on the internal network and security infrastructure as compared to Cisco WSA.
- D. Cisco CWS eliminates the need to backhaul traffic through headquarters for remote workers whereas Cisco WSA does not

Answer: A
