

# Cisco 400-007 Practice Test Software for Desktop

P.S. Free & New 400-007 dumps are available on Google Drive shared by Pass4Leader: [https://drive.google.com/open?id=1aT\\_dvWuSdzlPdOFMWOfI3-V0z68kTE4n](https://drive.google.com/open?id=1aT_dvWuSdzlPdOFMWOfI3-V0z68kTE4n)

If you want to get promotions or high-paying jobs in the Cisco sector, then it is important for you to crack the Cisco Certified Design Expert (CCDE v3.0) Written Exam (400-007) certification exam. The Cisco 400-007 certification has become the best way to validate your skills and accelerate your tech career. 400-007 Exam applicants who are doing jobs or busy with their other matters usually don't have enough time to study for the test.

We now live in a world which needs the talents who can combine the practical abilities and knowledge to apply their knowledge into the practical working conditions. To prove that you are that kind of talents you must boost some authorized and useful certificate and the test 400-007 certificate is one kind of these certificate. Passing the test 400-007 certification can prove you are that kind of talents and help you find a good job with high pay and if you buy our 400-007 guide torrent you will pass the exam successfully.

## Exam 400-007 Pass Guide, Valid 400-007 Practice Materials

As long as you get to know our 400-007 exam questions, you will figure out that we have set an easier operation system for our candidates. Once you have a try, you can feel that the natural and seamless user interfaces of our 400-007 study materials have grown to be more fluent and we have revised and updated 400-007 learning braindumps according to the latest development

situation. Without doubt, we are the best vendor in this field and we also provide the first-class service for you.

The CCDE certification is recognized as one of the most prestigious certifications in the networking industry. It is designed for senior-level network architects, engineers, and designers who are responsible for designing, implementing, and managing large-scale networks. The CCDE certification is focused on network design principles and best practices, and it covers a wide range of topics related to network design, including network architecture, protocols, security, and scalability.

## Cisco Certified Design Expert (CCDE v3.0) Written Exam Sample Questions (Q280-Q285):

### NEW QUESTION # 280

[Security, Automation, and Policy Integration in Design] Which two actions reduce the impact of trusted NMS polling (e.g., high CPU on devices, instability)?

(Choose two)

- A. Prevent polling of large tables through the use of SNMP OID restrictions
- B. Increase the SNMP process priority
- C. Implement SNMP community restrictions that are associated with an ACL
- D. Disable unused OIDs and MIBs on the NMS systems
- E. Unload unused MIBs from the network devices

**Answer: A,C**

Explanation:

#Explanation:

\* A: Restricting SNMP OID polling to only necessary objects prevents large MIB walks and reduces processing load.

\* D: Associating SNMP communities with ACLs allows access control and limits polling scope to trusted hosts.

Other options:

\* B: Disabling OIDs on the NMS reduces resource usage there, but doesn't protect network devices.

\* C: Increasing SNMP priority could negatively impact other processes and is not a best practice.

\* E: Unloading MIBs on devices is typically not possible or effective.

### NEW QUESTION # 281

An architect receives a business requirement from a CTO that states the RTO and RPO for a new system should be as close as possible to zero. Which replication method and data center technology should be used?

- A. synchronous replication over dual data centers via Metro Ethernet
- B. asynchronous replication over dual data centers via DWDM
- C. synchronous replication over geographically dispersed dual data centers via MPLS
- D. asynchronous replication over geographically dispersed dual data centers via CWDM

**Answer: A**

Explanation:

\* C (Synchronous replication over Metro Ethernet) provides real-time replication with zero data loss (RPO = 0) and minimal recovery time (RTO # 0).

\* Metro Ethernet offers low-latency, high-bandwidth, and deterministic connectivity between closely located data centers, ideal for synchronous replication.

Why other options are incorrect:

\* A & D: Asynchronous replication cannot guarantee zero RPO/RTO.

\* B: MPLS introduces variable latency unsuitable for synchronous replication.

-

### NEW QUESTION # 282

An IT service provider is upgrading network infrastructure to comply with PCI security standards. The network team finds that 802.1X and VPN authentication based on locally-significant certificates are not available on some legacy phones. Which workaround solution meets the requirement?

- A. Use authentication-based clear text password with no EAP-MD5 on the legacy phones.

- B. Enable phone VPN authentication based on end-user username and password.
- C. Temporarily allow fallback to TLS 1.0 when using certificates and then upgrade the software on legacy phones.
- D. Replace legacy phones with new phones because the legacy phones will lose trust if the certificate is renewed.

**Answer: B**

Explanation:

\* B (Enable phone VPN authentication based on end-user username and password): When legacy devices don't support certificate-based authentication, fallback to username/password provides a temporary workaround while maintaining PCI compliance, assuming strong credentials and secure tunnels are used.

Other options explained:

- \* A: Immediate hardware replacement may not be feasible.
- \* C: TLS 1.0 fallback violates PCI standards, which prohibit deprecated protocols.
- \* D: Clear text authentication is non-compliant with PCI requirements.

### NEW QUESTION # 283

Company XYZ is designing the IS-IS deployment strategy for their multiarea IS-IS domain. They want IS-IS neighbor relationships minimized on each segment and the LSDB size optimized. Which design can be used?

- A. Design the network so that the routers connecting to other areas are Level 1/Level 2 routers and internal routers are Level 1
- B. Design the network so that the routers connecting to other areas are Level 2 routers and internal routers are Level 1
- C. Design all routers as Level 2 routers. Set the links between the routers as Level 1 with the area
- D. Design the network so that all routers are Level 1 routers

**Answer: A**

Explanation:

\* D (L1/L2 for ABRs and L1 for internal routers): This hierarchical approach minimizes LSDB size inside areas (L1 routers only maintain intra-area routes) while L1/L2 routers handle inter-area route propagation, reducing neighbor adjacencies and improving scalability.

Other options explained:

- \* A: Level 2 everywhere results in larger LSDBs across all routers.
- \* B: Only L2 routers at ABRs would isolate L1 domains improperly.
- \* C: Pure L1 design prevents inter-area reachability.

### NEW QUESTION # 284

An architect prepares a network design for a startup company. The design must be able to meet business requirements while the business grows and divests due to rapidly changing markets. What is the highest priority in this design?

- A. The network should be scalable.
- B. The network should be modular.
- C. The network should be hierarchical
- D. The network should have a dedicated core.

**Answer: C**

### NEW QUESTION # 285

.....

In the 21 Century, the 400-007 certification became more and more recognized in the society because it represented the certain ability of examinees. However, in order to obtain 400-007 certification, you have to spend a lot of time preparing for the 400-007 Exam. Many people gave up because of all kinds of difficulties before the examination, and finally lost the opportunity to enhance their self-worth. But our 400-007 exam questions will help you pass the exam for sure.
