Cisco Supporting Cisco Devices for Field Technicians Sample Questions (Q32-Q37):

NEW QUESTION # 32

What is the purpose of the packages.conf file in Install mode on Cisco IOS XE Software supported switches?

- A. It contains the entire bundled software image in a single file.
- **B. It determines which software packages need to be loaded and in what order during boot up.**
- C. It is a subdirectory in flash memory where individual software packages are stored.
- D. It is used to extract the bin file during the installation process.

Answer: B

Explanation:

In Install mode, the packages.conf file plays a crucial role in the boot process of Cisco IOS XE Software. It specifies the list of software packages to be loaded and the sequence in which they should be initialized during system startup. This file ensures that all necessary components are correctly loaded, providing a modular and flexible approach to software management.

Contrary to the other options:

- * The packages.conf file does not extract the bin file; it references already extracted packages.
- * It does not contain the entire bundled image; that's characteristic of Bundle mode.
- * While it resides in the flash memory, it is not a subdirectory but a configuration file.

NEW QUESTION # 33

Drag and drop the network connectivity and management tools used to ensure connectivity from the left onto the description on the right.

SSH	sends ICMP echo request packets to verify connectivity
Telnet	allows virtual terminal connections with unencrypted traffic
PING	provides secure, encrypted remote access to network devices
IP address configuration	requires the PC and Cisco device to be in the same subnet for direct connection

Answer:

Explanation:

SSH	PING
Telnet	Telnet
PING	SSH
IP address configuration	IP address configuration

Explanation:

* PING# Sends ICMP echo request packets to verify connectivity

* Telnet# Allows virtual terminal connections with unencrypted traffic

* SSH# Provides secure, encrypted remote access to network devices

* IP address configuration# Requires the PC and Cisco device to be in the same subnet for direct connection These tools and their functions are covered under "Device Configuration and Verification" in the FLDTEC course:

PING: Utilized to test basic network connectivity using ICMP echo request/reply messages. It confirms whether a device is reachable and measures the round-trip time.

Telnet: A protocol that allows for remote device access but transmits data in plaintext, which makes it insecure. It's typically disabled by default on modern Cisco devices due to security concerns.

SSH (Secure Shell): Replaces Telnet as the preferred method for secure CLI access. It encrypts the session, protecting sensitive information such as login credentials.

IP Address Configuration: For direct device access via the same local network, both the PC and the Cisco device must be in the same subnet. This allows the use of tools like browser-based GUIs or terminal emulators when connecting directly.

NEW QUESTION # 34

What does OIR stand for in the context of Cisco ASR component replacement?

- A. Offline Installation and Reboot
- B. Operational Interface Redundancy
- C. Optical Interface Routing
- **D. Online Insertion and Removal**

Answer: D

Explanation:

Online Insertion and Removal (OIR) is a feature supported by Cisco ASR routers that allows for the insertion and removal of hardware components, such as line cards and modules, while the router is operating.

This capability enables maintenance and upgrades without the need to power down the system, thus minimizing network downtime.

Key aspects of OIR include:

* Seamless Operation: OIR allows for hardware changes without interrupting the router's operation.

* Preservation of Routing Information: The router maintains all routing information and active sessions during the insertion or removal process.

* Administrative Shutdown: While not mandatory, it is recommended to administratively shut down the interfaces associated with the component being removed to ensure a graceful transition.

This feature is particularly beneficial in high-availability environments where maintaining continuous network service is critical.

NEW QUESTION # 35

Which type of license is locally managed and does not require external tools for management?

- A. Hybrid licenses
- **B. RTU licenses**
- C. PAK licenses
- D. Smart licenses

Answer: B

Explanation:

Right-To-Use (RTU) licenses are locally managed licenses that allow users to activate specific features on Cisco devices without the need for external tools or connectivity to Cisco's licensing infrastructure. These licenses operate on an honor-based system, where the user agrees to comply with the licensing terms without mandatory enforcement mechanisms.

In contrast:

* Hybrid licenses combine aspects of traditional and smart licensing models.

* PAK (Product Authorization Key) licenses require registration and activation through Cisco's licensing portal.

* Smart licenses necessitate communication with Cisco's Smart Licensing servers for activation and management.

NEW QUESTION # 36

Which layer of the OSI model provides error detection and defines how access to the media is controlled?

- A. Physical layer
- B. Presentation layer
- C. Network layer
- **D. Data link layer**

Answer: D

Explanation:

The Data Link Layer (Layer 2) of the OSI model is responsible for node-to-node data transfer and plays a crucial role in error detection and media access control. It ensures that data frames are transmitted to the correct device on a local network segment.

This layer is divided into two sublayers:

* Logical Link Control (LLC): Manages frame synchronization, flow control, and error checking.

* Media Access Control (MAC): Controls how devices on the network gain access to the medium and permission to transmit data.

Together, these sublayers ensure reliable data transmission by detecting and possibly correcting errors that may occur in the Physical Layer. They also manage how devices share the transmission medium, preventing collisions and ensuring orderly communication.
