

Cisco Realistic 350-701 Download Fee Pass Guaranteed Quiz

P.S. Free & New 350-701 dumps are available on Google Drive shared by PrepAwayPDF: <https://drive.google.com/open?id=1I2nN6qlbvg6C68Tg851BULi0gXRyRZtk>

We believe that every customer pays most attention to quality when he is shopping. Only high-quality goods can meet the needs of every customer better. And our 350-701 study materials have such high quality, because its hit rate of test questions is extremely high. Perhaps you will find in the examination that a lot of questions you have seen many times in our 350-701 Study Materials. In addition, the passing rate is the best test for quality of study materials. And we can be very proud to tell you that the passing rate of our 350-701 study materials is almost 100 %.

Cisco 350-701 Certification Exam is a valuable certification for security professionals who want to demonstrate their knowledge and skills in network security. Preparing for this certification exam requires dedication and commitment, but earning the certification can open up new career opportunities and enhance job prospects for security professionals.

Quiz 350-701 - Perfect Implementing and Operating Cisco Security Core Technologies Download Fee

We guarantee that you can enjoy the premier certificate learning experience under our help with our 350-701 prep guide since we put a high value on the sustainable relationship with our customers. First of all we have fast delivery after your payment in 5-10 minutes, and we will transfer 350-701 Guide Torrent to you online. Besides if you have any trouble coping with some technical and operational problems while using our 350-701 exam torrent, please contact us immediately and our 24 hours online services will spare no effort to help you solve the problem in no time.

Cisco Implementing and Operating Cisco Security Core Technologies Sample Questions (Q708-Q713):

NEW QUESTION # 708

What is a benefit of using telemetry over SNMP to configure new routers for monitoring purposes?

- A. Telemetry uses a pull method, which makes it more reliable than SNMP
- **B. Telemetry uses a push method which makes it faster than SNMP**
- C. Telemetry uses push and pull which makes it more secure than SNMP
- D. Telemetry uses push and pull, which makes it more scalable than SNMP

Answer: B

Explanation:

ExplanationSNMP polling can often be in the order of 5-10 minutes, CLIs are unstructured and prone to change which can often break scripts. The traditional use of the pull model, where the client requests data from the network does not scale when what you want is near real-time data. Moreover, in some use cases, there is the need to be notified only when some data changes, like interfaces status, protocol neighbors change etc. Model-Driven Telemetry is a new approach for network monitoring in which data is streamed from network devices continuously using a push model and provides near real-time access to operational statistics. Reference: <https://developer.cisco.com/docs/ios-xe/#!streaming-telemetry-quick-start-guide/streaming-telemetry>

NEW QUESTION # 709

Which VMware platform does Cisco ACI integrate with to provide enhanced visibility, provide policy integration and deployment, and implement security policies with access lists?

- A. VMware vRealize
- B. VMware Fusion
- C. VMware Horizons
- D. VMware APIC

Answer: D

Explanation:

VMware APIC is a platform that integrates with Cisco ACI to provide enhanced visibility, policy integration and deployment, and security policies with access lists. VMware APIC is a virtual appliance that runs on VMware vSphere and communicates with the Cisco APIC controller. VMware APIC allows administrators to create and manage Cisco ACI policies for VMware virtual machines and networks. VMware APIC also provides a unified view of the physical and virtual network topology, health, and statistics. VMware APIC supports the following modes of Cisco ACI and VMware integration:

* VMware VDS: When integrated with Cisco ACI, the VMware vSphere Distributed Switch (VDS) enables administrators to configure VM networking in the ACI fabric.

* Cisco ACI Virtual Edge: Cisco ACI Virtual Edge is a distributed service that provides Layer 4 to Layer 7 services for applications running on VMware vSphere.

* Cisco Application Virtual Switch (AVS): Cisco AVS is a distributed virtual switch that provides policy-based network services for VMware vSphere environments. References:

* Cisco ACI with VMware VDS Integration

NEW QUESTION # 710

Using Cisco Firepower's Security Intelligence policies, upon which two criteria is Firepower block based? (Choose two)

- A. MAC addresses
- B. URLs
- C. protocol IDs
- D. IP addresses
- E. port numbers

Answer: B,D

Explanation:

Security Intelligence Sources

...

Custom Block lists or feeds (or objects or groups)

Block specific IP addresses, URLs, or domain names using a manually-created list or feed (for IP addresses, you can also use network objects or groups.) For example, if you become aware of malicious sites or addresses that are not yet blocked by a feed, add these sites to a custom Security Intelligence list and add this custom list to the Block list in the Security Intelligence tab of your access control policy.

Security Intelligence Sources

...

Custom Block lists or feeds (or objects or groups)

Block specific IP addresses, URLs, or domain names using a manually-created list or feed (for IP addresses, you can also use

network objects or groups.) For example, if you become aware of malicious sites or addresses that are not yet blocked by a feed, add these sites to a custom Security Intelligence list and add this custom list to the Block list in the Security Intelligence tab of your access control policy.

NEW QUESTION # 711

Drag and drop the steps from the left into the correct order on the right to enable AppDynamics to monitor an EC2 instance in Amazon Web Services.

Install monitoring extension for AWS EC2.	step 1
Restart the Machine Agent.	step 2
Update config.yaml.	step 3
Configure a Machine Agent or SIM Agent.	step 4

Answer:

Explanation:

Install monitoring extension for AWS EC2.	Configure a Machine Agent or SIM Agent.
Restart the Machine Agent.	Install monitoring extension for AWS EC2.
Update config.yaml.	Update config.yaml.
Configure a Machine Agent or SIM Agent.	Restart the Machine Agent.

NEW QUESTION # 712

An engineer is configuring AMP for endpoints and wants to block certain files from executing. Which outbreak control method is used to accomplish this task?

- A. simple detections
- B. advanced custom detections
- C. device flow correlation
- D. application blocking list

Answer: D

Explanation:

The application blocking list is an outbreak control method that allows the administrator to block certain files from executing on the endpoints based on their SHA values. This can prevent malware from running on the endpoints and causing damage. The other options are not outbreak control methods, but rather different features of AMP for endpoints. Device flow correlation is a network analysis feature that monitors connections and detects malicious activity. Simple detections and advanced custom detections are custom rules that can be created by the administrator to detect and block files based on signatures or other criteria. References:
