Which of the following is TRUE about tiles? - ANSWER-A digital photograph or music can be a file.

The study system of our company will provide all customers with the best study materials. If you buy the CISM latest questions of our company, you will have the right to enjoy all the CISM certification training dumps from our company. More importantly, there are a lot of experts in our company; the first duty of these experts is to update the study system of our company day and night for all customers. By updating the study system of the CISM training materials, we can guarantee that our company can provide the newest information about the exam for all people. We believe that getting the newest information about the exam will help all customers pass the CISM Exam easily. If you purchase our study materials, you will have the opportunity to get the newest information about the CISM exam. More importantly, the updating system of our company is free for all customers. It means that you can enjoy the updating system of our company for free.

ISACA CISM certification is a globally recognized certification for information security professionals. It is designed for individuals who are responsible for managing, designing, and overseeing the information security programs of their organizations. Certified Information Security Manager certification is highly respected in the industry and is considered a benchmark for information security management.

The CISM certification provides numerous benefits to information security professionals. It validates their expertise in information security management and provides a competitive edge in the job market. It also demonstrates a commitment to professional development and ongoing learning, as CISM holders must earn continuing education credits to maintain their certification. The CISM certification is recognized by employers and clients worldwide, and it is often a requirement for high-level information security management positions.

In-Depth of Questions CISM valuable resource

Generally speaking, passing the exam means a lot, if you pass the exam, your efforts and the money won't be wasted. CISM test materials can help you pass your exam just one time, otherwise we will give you full refund. Besides, CISM training materials are high-quality, and we have received many good feedbacks from candidates. We also pass guarantee and money back guarantee if you fail to pass the exam. You can enjoy free update for one year for CISM Exam Materials, and the update version will be sent to your email automatically.

ISACA Certified Information Security Manager Sample Questions (Q190-Q195):

NEW QUESTION # 190
The PRIMARY advantage of single sign-on (SSO) is that it will:

- A. strengthen user passwords.
- B. support multiple authentication mechanisms.
- C. increase the security of related applications.
- D. increase efficiency of access management

Answer: D

Explanation:

Single sign-on (SSO) is a technology that allows users to access multiple applications or services with one set of credentials, such as a username and password. The primary advantage of SSO is that it increases the efficiency of access management, as it reduces the need for users to remember and enter multiple passwords for different applications or services. SSO also simplifies the user experience, as they can log in once and access multiple resources without having to switch between different windows or tabs. SSO can also improve the security of related applications, as it reduces the risk of password compromise or phishing attacks. However, SSO does not strengthen user passwords or support multiple authentication mechanisms by itself. It is a complementary technology that enhances the security and convenience of access management. Reference = CISM Review Manual, 16th Edition, page 991 The primary advantage of single sign-on (SSO) is that it increases the efficiency of access management. With SSO, users only need to remember one set of credentials to access all of their applications, rather than having to remember multiple usernames and passwords for each application. This simplifies the user experience and helps to reduce the amount of time spent managing access to multiple applications. Additionally, SSO can also increase the security of related applications, as users are not sharing the same credentials across multiple applications, and it can also support multiple authentication mechanisms, such as biometric authentication.

NEW QUESTION # 191
Labeling information according to its security classification:

- A. reduces the number and type of countermeasures required.
- B. reduces the need to identify baseline controls for each classification.
- C. affects the consequences if information is handled insecurely.
- D. enhances the likelihood of people handling information securely.

Answer: D

Explanation:
Labeling information according to its security classification enhances the likelihood of people handling information securely. Security classification is a process of categoriz-ing information based on its level of sensitivity and importance, and applying appropri-ate security controls based on the level of risk associated with that infor-mation1. Labeling is a process of marking the information with the appropriate classifi-cation level, such as public, internal, confidential, secret, or top secret2. The purpose of labeling is to inform the users of the information about its value and protection re-quirements, and to guide them on how to handle it securely. Labeling can help users to:
*Identify the information they are dealing with and its classification level
*Understand their roles and responsibilities regarding the information
*Follow the security policies and procedures for the information
*Avoid unauthorized access, disclosure, modification, or destruction of the information

*Report any security incidents or breaches involving the information
Labeling can also help organizations to:
*Track and monitor the information and its usage
*Enforce access controls and encryption for the information
*Audit and review the compliance with security standards and regulations for the infor-mation
*Educate and train employees and stakeholders on information security awareness and best practices Therefore, labeling information according to its security classification enhances the likelihood of people handling information securely, as it increases their awareness and accountability, and supports the implementation of security measures. The other op-tions are not the primary benefits of labeling information according to its security clas-sification. Reducing the number and type of countermeasures required is not a benefit, but rather a consequence of applying security controls based on the classification lev-el. Reducing the need to identify baseline controls for each classification is not a bene-fit, but rather a prerequisite for labeling information according to its security classifica-tion. Affecting the consequences if information is handled insecurely is not a benefit, but rather a risk that needs to be managed by implementing appropriate security con-trols and incident response procedures.
