

CKA Study Tool - CKA Exam Questions And Answers

What's more, part of that Test4Engine CKA dumps now are free: https://drive.google.com/open?id=1LOY2jgNRwaJtvey4aVhuown_bRjQB1Fd

With the development of information and communications technology, we are now living in a globalized world. CKA information technology learning is correspondingly popular all over the world. Modern technology has changed the way how we live and work. When it comes to the study materials selling in the market, qualities are patchy. But our CKA test material has been recognized by multitude of customers, which possess of the top-class quality, can help you pass exam successfully. On the other hand, our CKA Latest Dumps are designed by the most experienced experts, thus it can not only teach you knowledge, but also show you the method of learning in the most brief and efficient ways.

The CKA exam is designed to test an individual's ability to perform real-world tasks in a Kubernetes environment. CKA exam is conducted online and consists of a set of performance-based tasks that need to be completed within a given time frame. CKA exam covers a range of topics such as Kubernetes architecture, installation and configuration, networking, storage, security, and troubleshooting. CKA Exam is challenging and requires a high level of expertise in Kubernetes administration. However, passing the exam is a testament to an individual's skills and knowledge in Kubernetes and can lead to better job opportunities and career growth in the industry.

CKA Exam Questions And Answers | Free CKA Practice Exams

CKA Guide Quiz helped over 98 percent of exam candidates get the certificate. Before you really attend the Linux Foundation CKA exam and choose your materials, we want to remind you of the importance of holding a certificate like this one. Obtaining a Linux Foundation CKA certificate like this one can help you master a lot of agreeable outcomes in the future, like higher salary, the opportunities to promotion and being trusted by the superiors and colleagues.

Linux Foundation Certified Kubernetes Administrator (CKA) Program Exam Sample Questions (Q36-Q41):

NEW QUESTION # 36

Score: 4%

Set configuration context: 

```
[student@node1: ~]$ | kube
ctl config use-context h
k8s
```

Task

Create a persistent volume with name app-data , of capacity 1Gi and access mode ReadOnlyMany. The type of volume is hostPath and its location is /srv/app-data .

Answer:

Explanation:

Solution:

```
#vi pv.yaml
apiVersion: v1
kind: PersistentVolume
metadata:
  name: app-config
spec:
  capacity:
    storage: 1Gi
  accessModes:
    - ReadOnlyMany
  hostPath:
    path: /srv/app-config
  #
kubectl create -f pv.yaml
```

NEW QUESTION # 37

You have a deployment named 'redis-deployment' running a Redis server with 3 replicas. You need to configure a service with the 'NodePort' type to expose Redis on all nodes in the cluster, but restrict access only from specific pods within a namespace.

Answer:

Explanation:

See the solution below with Step by Step Explanation.

Explanation:

Solution (Step by Step) :

1. Create a NetworkPolicy:

- Define a NetworkPolicy resource that allows traffic from specific pods in a namespace to the Redis service.

```

apiVersion: networking.k8s.io/v1
kind: NetworkPolicy
metadata:
  name: allow-specific-pods-to-redis
  namespace:
spec:
  podSelector:
    matchLabels:
      app: redis # Match the Redis service label
  ingress:
  - from:
    - podSelector:
      matchLabels:
        app: allowed-app # Match label of pods allowed to access Redis

```

2. Create the NodePort service: - Create a NodePort service for the Redis deployment, allowing access to the Redis server through all nodes in the cluster.

```

apiVersion: v1
kind: Service
metadata:
  name: redis-service
  namespace:
spec:
  type: NodePort
  ports:
  - port: 6379
    targetPort: 6379
    nodePort: 30000 # Choose an available NodePort range
  selector:
    app: redis

```

3. Apply the resources: - Apply the NetworkPolicy and service using 'kubectl apply -f networkpolicy.yaml' and 'kubectl apply -f redis-service.yaml'. 4. Verify: - Check the status of the NetworkPolicy and service: - 'kubectl get networkpolicies allow-specific-pods-to-redis -n' - 'kubectl get services redis-service -n' 5. Test: - From a pod labeled with 'app: allowed-app', try to connect to the Redis service using the NodePort on the node. - From a pod that doesn't have the 'allowed-app' label, attempt to connect to the Redis service using the NodePort. You should not be able to connect. Note: Replace with the actual namespace where your Redis deployment and the pods allowed to access it are located.

NEW QUESTION # 38

You have a Deployment running a web application that receives a significant amount of traffic. You need to implement a strategy to scale the Deployment based on the traffic load while ensuring that the application remains available during the scaling process.

Answer:

Explanation:

See the solution below with Step by Step Explanation.

Explanation:

Solution (Step by Step) :

1. Use a Deployment:

- Deploy the web application using a Deployment with the desired number of replicas.

2. Define a Service:

- Create a Service that exposes the application to the outside world.

- Use a 'type: LoadBalancer' to distribute traffic across the pods.

3. Implement Horizontal Pod Autoscaler (HPA):

- Create an HPA that monitors the web application's CPU usage.

- Configure the HPA to scale the Deployment based on the CPU utilization.

```
apiVersion: autoscaling/v2beta2
kind: HorizontalPodAutoscaler
metadata:
  name: web-app-hpa
spec:
  scaleTargetRef:
    apiVersion: apps/v1
    kind: Deployment
    name: web-app
  minReplicas: 1
  maxReplicas: 10
  metrics:
  - type: Resource
    resource:
      name: cpu
    target:
      type: Utilization
      averageUtilization: 50
```

4. Test the Autoscaling: - Simulate increased traffic to the web application.
- Observe the HPA scaling the Deployment to meet the demand.
5. Monitor the Service: - Monitor the web application's performance and ensure that it remains available and stable during scaling.
6. Adjust HPA Configuration: - Fine-tune the HPA configuration to optimize scaling based on specific performance needs.

NEW QUESTION # 39

Create a busybox pod and add "sleep 3600" command

Answer:

Explanation:

See the solution below.

Explanation

```
kubectl run busybox --image=busybox --restart=Never -- /bin/sh -c
"sleep 3600"
```

NEW QUESTION # 40

Configure the kubelet systemd- managed service, on the node labelled with name=wk8s-node-1, to launch a pod containing a single container of Image httpd named webtool automatically. Any spec files required should be placed in the /etc/kubernetes/manifests directory on the node.

You can ssh to the appropriate node using:

```
[student@node-1] $ ssh wk8s-node-1
```

You can assume elevated privileges on the node with the following command:

```
[student@wk8s-node-1] $ | sudo -i
```

Answer:

Explanation:

NEW QUESTION # 41

.....

Perhaps you do not understand. Anyway, what I want to tell you that our CKA exam questions can really help you pass the exam faster. Imagine how much chance you will get on your career path after obtaining an internationally certified CKA certificate! You will get a better job or get a big rise on the position as well as the salary. And we can claim that if you study with our CKA study materials for 20 to 30 hours, you will pass the exam with ease.
