Amazon AWS Certified Cloud Practitioner Sample Questions (Q341-Q346):

NEW QUESTION # 341

Which AWS services or features can control VPC traffic? (Select TWO.)

- A. Amazon GuardDuty
- B. AWS Direct Connect
- C. Network ACLs
- D. Security groups
- E. Amazon Connect

Answer: C,D

Explanation:

The AWS services or features that can control VPC traffic are security groups and network ACLs. Security groups are stateful

firewalls that control the inbound and outbound traffic at the instance level. You can assign one or more security groups to each instance in a VPC, and specify the rules that allow or deny traffic based on the protocol, port, and source or destination. Network ACLs are stateless firewalls that control the inbound and outbound traffic at the subnet level. You can associate one network ACL with each subnet in a VPC, and specify the rules that allow or deny traffic based on the protocol, port, and source or destination. AWS Direct Connect, Amazon GuardDuty, and Amazon Connect are not services or features that can control VPC traffic. AWS Direct Connect is a service that establishes a dedicated network connection between your premises and AWS. Amazon GuardDuty is a service that monitors your AWS account and workloads for malicious or unauthorized activity. Amazon Connect is a service that provides a cloud-based contact center solution.

NEW QUESTION # 342

Where can users find examples of AWS Cloud solution designs?

- **A. AWS Architecture Center**
- B. AWS Trusted Advisor
- C. AWS Marketplace
- D. AWS Service Catalog

Answer: A

Explanation:

The AWS Architecture Center provides examples, best practices, and architectural blueprints for various AWS Cloud solutions. It includes whitepapers, reference architectures, and detailed diagrams to help users design secure, scalable, and reliable applications on AWS. Other services like AWS Marketplace, Service Catalog, and Trusted Advisor do not offer solution design examples.

NEW QUESTION # 343

Which AWS service or feature can be used to estimate costs before deployment?

- A. AWS Cost and Usage Report
- **B. AWS Pricing Calculator**
- C. AWS Free Tier
- D. AWS Billing and Cost Management

Answer: B

Explanation:

Explanation

AWS Pricing Calculator can be used to estimate costs before deployment. AWS Pricing Calculator is a tool that helps the user to compare the cost of AWS services for different use cases and configurations. The user can create estimates for various AWS services, such as Amazon EC2, Amazon S3, Amazon RDS, and more.

The user can also adjust the parameters, such as region, instance type, storage size, and duration, to see how they affect the cost. AWS Pricing Calculator provides a detailed breakdown of the estimated cost, as well as a summary of the key drivers of the cost.

NEW QUESTION # 344

A company wants to manage its AWS Cloud resources through a web interface. Which AWS service will meet this requirement?

- **A. AWS Management Console**
- B. AWS SDK
- C. AWS CLI
- D. AWS Cloud

Answer: A

Explanation:

Explanation

AWS Management Console is a web application that allows you to manage and monitor your AWS Cloud resources through a user-friendly interface. You can use the AWS Management Console to access and experiment with over 150 AWS services, view and modify your account and billing information, get in-console help from AWS Support, and customize your dashboard with

widgets that display key metrics and information for your applications⁵⁶⁷. You can also use the AWS Management Console to launch and configure AWS resources using wizards and templates, without writing any code⁵. NEW QUESTION # 345

Which AWS Cloud design principle does a company follow by using AWS CloudTrail?

- A. Perform operations as code.
- B. Recover automatically.
- C. **Ensure traceability.**
- D. Measure efficiency.

Answer: C

Explanation:

The company follows the AWS Cloud design principle of ensuring traceability by using AWS CloudTrail. AWS CloudTrail is a service that records the API calls and events made by or on behalf of the AWS account. The company can use AWS CloudTrail to monitor, audit, and analyze the activity and changes in their AWS resources and applications. AWS CloudTrail helps the company to achieve compliance, security, governance, and operational efficiency. Recovering automatically, performing operations as code, and measuring efficiency are other AWS Cloud design principles, but they are not directly related to using AWS CloudTrail. Recovering automatically means that the company can design their cloud workloads to handle failures gracefully and resume normal operations without manual intervention. Performing operations as code means that the company can automate the creation, configuration, and management of their cloud resources using scripts or templates. Measuring efficiency means that the company can monitor and optimize the performance and utilization of their cloud resources and applications³⁴
