

# CLF-C02 Practice Tests | Valid Braindumps CLF-C02 Sheet

BONUS!!! Download part of Prep4cram CLF-C02 dumps for free: <https://drive.google.com/open?id=1OVWsJLfME5-vUJYD3CgWrG9nNiR7YfNU>

CLF-C02 test dumps are aiming at helping you to pass the exam in the shortest time and with the least amount of effort. As the saying goes, an inch of gold is an inch of time. Whether you are an office worker or a student or even a housewife, time is your most important resource. With CLF-C02 study materials, you may only need to spend half of your time that you will need if you don't use our CLF-C02 test answers on successfully passing a professional qualification exam. In this way, you will have more time to travel, go to parties and even prepare for another exam. The benefits of CLF-C02 Study Materials for you are far from being measured by money. CLF-C02 test answers have a first-rate team of experts, advanced learning concepts and a complete learning model. The time saved for you is the greatest return to us.

## Amazon CLF-C02 Exam Syllabus Topics:

| Topic   | Details                                                                                                                                                                                                                                                                                                 |
|---------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Topic 1 | <ul style="list-style-type: none"><li>Cloud Concepts: This section involves knowledge of value proposition and exploring design rules of AWS. It covers the advantages of techniques for moving over to AWS cloud and developing a good understanding of cloud economics.</li></ul>                     |
| Topic 2 | <ul style="list-style-type: none"><li>Billing, Pricing, and Support: This section contrasts pricing methods and budgeting resources management. It also tests understanding of billing methods, identifying support options, and technical resources.</li></ul>                                         |
| Topic 3 | <ul style="list-style-type: none"><li>Security and Compliance: This section involves understanding the shared responsibility framework of AWS in addition to compliance and governance. It also involves exploring the management capabilities of AWS by exploring its security capabilities.</li></ul> |
| Topic 4 | <ul style="list-style-type: none"><li>Cloud Technology and Services: Describe ways to access AWS services in AWS Cloud and explore connectivity options. It deals with defining the global infrastructure of AWS, computing services, and network services.</li></ul>                                   |

## CLF-C02 Exam Torrent & CLF-C02 Actual Test & CLF-C02 Pass Rate

Life is short for each of us, and time is precious to us. Therefore, modern society is more and more pursuing efficient life, and our CLF-C02 Study Materials are the product of this era, which conforms to the development trend of the whole era. It seems that we have been in a state of study and examination since we can remember, and we have experienced countless tests, including the qualification examinations we now face. In the process of job hunting, we are always asked what are the achievements and what certificates have we obtained?

### Amazon AWS Certified Cloud Practitioner Sample Questions (Q139-Q144):

#### NEW QUESTION # 139

When a user wants to utilize their existing per-socket, per-core, or per-virtual machine software licenses for a Microsoft Windows server running on AWS, which Amazon EC2 instance type is required?

- A. Spot Instances
- B. Dedicated Instances
- C. Reserved Instances
- D. Dedicated Hosts

**Answer: D**

Explanation:

The correct answer is C because Dedicated Hosts are Amazon EC2 instances that are required when a user wants to utilize their existing per-socket, per-core, or per-virtual machine software licenses for a Microsoft Windows server running on AWS. Dedicated Hosts are physical servers that are dedicated to a single customer. Dedicated Hosts allow customers to use their existing server-bound software licenses, such as Windows Server, SQL Server, and SUSE Linux Enterprise Server, subject to their license terms. The other options are incorrect because they are not Amazon EC2 instances that are required when a user wants to utilize their existing per-socket, per-core, or per-virtual machine software licenses for a Microsoft Windows server running on AWS. Spot Instances are spare Amazon EC2 instances that are available at up to 90% discount compared to On-Demand prices. Spot Instances are suitable for stateless, fault-tolerant, and flexible workloads that can recover from interruptions easily. Dedicated Instances are Amazon EC2 instances that run on hardware that is dedicated to a single customer, but not to a specific physical server. Dedicated Instances do not allow customers to use their existing server-bound software licenses. Reserved Instances are Amazon EC2 instances that are reserved for a specific period of time (one or three years) in exchange for a lower hourly rate. Reserved Instances are suitable for steady-state or predictable workloads that run for a long duration. Reserved Instances do not allow customers to use their existing server-bound software licenses.

#### NEW QUESTION # 140

A company needs stateless network filtering for its VPC.  
Which AWS service, tool, or feature will meet this requirement?

- A. Security group
- B. AWS PrivateLink
- C. Network access control list (ACL)
- D. AWS WAF

**Answer: C**

Explanation:

A Network Access Control List (ACL) is a stateless network filtering mechanism provided by AWS for controlling traffic in and out of subnets within a VPC. Unlike security groups, which are stateful, network ACLs are stateless. This means that they do not automatically allow responses to inbound traffic unless explicitly specified. Network ACLs allow you to set rules for both inbound and outbound traffic, making them suitable for stateless filtering. Security groups, on the other hand, are stateful, while AWS WAF is primarily for web application-level security. AWS PrivateLink is used for privately connecting VPCs to AWS services without using an internet gateway. Therefore, for stateless network filtering, Network ACL is the correct choice.

#### NEW QUESTION # 141

An AWS user wants to proactively detect when an instance or account might be compromised or if there are threats from attacks. Which AWS service should the user choose?

- A. AWS Shield
- **B. Amazon GuardDuty**
- C. Amazon Inspector
- D. AWS WAF

**Answer: B**

Explanation:

Amazon GuardDuty is a threat detection service that continuously monitors AWS accounts and workloads for malicious activity and unauthorized behavior to help protect your AWS resources. It uses machine learning, anomaly detection, and integrated threat intelligence to detect when an instance or account might be compromised or if there are threats from attacks.

\* B. AWS WAF: Incorrect, as it is a web application firewall that protects against common web exploits but does not provide comprehensive threat detection.

\* C. AWS Shield: Incorrect, as it provides protection against DDoS attacks but does not detect compromises within AWS accounts.

\* D. Amazon Inspector: Incorrect, as it is a service that helps improve the security and compliance of applications deployed on AWS by assessing for vulnerabilities, not for threat detection.

AWS Cloud References:

\* Amazon GuardDuty

#### NEW QUESTION # 142

Which option is a shared responsibility between AWS and its customers under the AWS shared responsibility model?

- A. Security of the physical infrastructure
- B. Application file system server-side encryption
- C. Configuration of Amazon EC2 instance operating systems
- **D. Patch management**

**Answer: D**

Explanation:

\* AWS Shared Responsibility Model Overview:

\* AWS manages security of the cloud, including physical infrastructure and foundational services.

\* Customers are responsible for security in the cloud, which includes operating system configuration, data encryption, and application patch management.

\* Why Patch Management Is Shared:

\* AWS is responsible for patching the underlying infrastructure.

\* Customers are responsible for patching the operating system and applications they install on their resources (e.g., EC2 instances).

\* Why Other Options Are Incorrect:

\* A. Configuration of Amazon EC2 instance operating systems: Fully the customer's responsibility.

\* B. Application file system server-side encryption: Customers configure and manage encryption.

\* D. Security of the physical infrastructure: Fully AWS's responsibility.

\* References:

\* AWS Shared Responsibility Model

#### NEW QUESTION # 143

A company that has multiple business units wants to centrally manage and govern its AWS Cloud environments. The company wants to automate the creation of AWS accounts, apply service control policies (SCPs), and simplify billing processes.

Which AWS service or tool should the company use to meet these requirements?

- A. AWS Budgets
- B. Cost Explorer
- C. AWS Trusted Advisor

- **D. AWS Organizations**

**Answer: D**

Explanation:

AWS Organizations is an AWS service that enables you to centrally manage and govern your AWS Cloud environments across multiple business units. AWS Organizations allows you to create an organization that consists of AWS accounts that you create or invite to join. You can group your accounts into organizational units (OUs) and apply service control policies (SCPs) to them. SCPs are a type of policy that specify the maximum permissions for the accounts in your organization, and can help you enforce compliance and security requirements. AWS Organizations also simplifies billing processes by enabling you to consolidate and pay for all member accounts with a single payment method. You can also use AWS Organizations to automate the creation of AWS accounts by using APIs or AWS CloudFormation templates.
