## Amazon AWS Certified Cloud Practitioner Sample Questions (Q746-Q751):

### NEW QUESTION # 746

A company runs Amazon EC2 instances in a research lab. The instances run for 3 hours each week and cannot be interrupted.

- A. Convertible Reserved Instances
- **B. On-Demand Instances**
- C. Spot Instances
- D. Compute Savings Plan

**Answer: B**

### NEW QUESTION # 747

A company is setting up AWS Identity and Access Management (IAM) on an AWS account. Which recommendation complies with IAM security best practices?

- **A. Turn on multi-factor authentication (MFA) for added security during the login process.**
- B. Avoid rotating credentials to prevent issues in production applications.
- C. Use the account root user access keys for administrative tasks.
- D. Grant broad permissions so that all company employees can access the resources they need.

**Answer: A**

Explanation:

C is correct because turning on multi-factor authentication (MFA) for added security during the login process is one of the IAM security best practices recommended by AWS. MFA adds an extra layer of protection on top of the user name and password, making it harder for attackers to access the AWS account. A is incorrect because using the account root user access keys for administrative tasks is not a good practice, as the root user has full access to all the resources in the AWS account and can cause irreparable damage if compromised.

AWS recommends creating individual IAM users with the least privilege principle and using roles for applications that run on Amazon EC2 instances. B is incorrect because granting broad permissions so that all company employees can access the resources they need is not a good practice, as it increases the risk of unauthorized or accidental actions on the AWS resources. AWS recommends granting only the permissions that are required to perform a task and using groups to assign permissions to IAM users. D is incorrect because avoiding rotating credentials to prevent issues in production applications is not a good practice, as it increases the risk of credential leakage or compromise. AWS recommends rotating credentials regularly and using temporary security credentials from AWS STS when possible.

#### NEW QUESTION # 748

A company wants to set AWS spending targets and track costs against those targets. Which AWS tool or feature should the company use to meet these requirements?

- A. AWS Cost Explorer
- **B. AWS Budgets**
- C. AWS Cost and Usage Report
- D. Savings Plans

**Answer: B**

Explanation:

Explanation

AWS Budgets is a tool that allows users to set AWS spending targets and track costs against those targets.

Users can create budgets for various dimensions, such as service, linked account, tag, and more. Users can also receive alerts when the actual or forecasted costs exceed or are projected to exceed the budgeted amount.

AWS Cost Explorer, AWS Cost and Usage Report, and Savings Plans are other AWS tools or features that can help users manage and optimize their AWS costs, but they do not enable users to set and track spending targets

#### NEW QUESTION # 749

A company needs a bridge between technology and business to help evolve to a culture of continuous growth and learning. Which perspective in the AWS Cloud Adoption Framework (AWS CAF) serves as this bridge?

- A. Operations
- B. Governance
- C. Security
- **D. People**

**Answer: D**

Explanation:

The People perspective in the AWS Cloud Adoption Framework (AWS CAF) serves as a bridge between technology and business, accelerating the cloud journey to help organizations more rapidly evolve to a culture of continuous growth, learning, and where change becomes business-as-normal, with focus on culture, organizational structure, leadership, and workforce<sup>1</sup>. #### NEW QUESTION # 750

A company wants to integrate natural language processing (NLP) into business intelligence (BI) dashboards.

The company wants to ask questions and receive answers with relevant visualizations.

Which AWS service or tool will meet these requirements?

- A. Amazon Rekognition
- B. Amazon Macie
- **C. Amazon QuickSight Q**
- D. Amazon Lex

**Answer: C**

Explanation:

Amazon QuickSight Q is a natural language query feature that allows users to ask questions about their data and receive answers in the form of relevant visualizations<sup>1</sup>. Amazon Macie is a data security and data privacy service that uses machine learning and pattern matching to discover and protect sensitive data in AWS<sup>2</sup>. Amazon Rekognition is a computer vision service that can analyze images and videos for faces, objects, scenes, text, and more<sup>3</sup>. Amazon Lex is a service for building conversational interfaces using voice and text<sup>4</sup>.
