We try our best to renovate and update our WGU Cloud-Deployment-and-Operations study materials in order to help you fill the knowledge gap during your learning process, thus increasing your confidence and success rate. At the same time, WGU Cloud-Deployment-and-Operations Preparation baidumps can keep pace with the digitized world by providing timely application. You will never fell disappointed with our Cloud-Deployment-and-Operations exam quiz.

In cyber age, it's essential to pass the Cloud-Deployment-and-Operations exam to prove ability especially for lots of office workers. Passing the Cloud-Deployment-and-Operations exam is not only for obtaining a paper certification, but also for a proof of your ability. Most people regard WGU certification as a threshold in this industry, therefore, for your convenience, we are fully equipped with a professional team with specialized experts to study and design the most applicable Cloud-Deployment-and-Operations Exam prepare.

The WGU Cloud-Deployment-and-Operations Exam Dumps In PDF File

## Format

We have been focusing on perfecting the Cloud-Deployment-and-Operations exam dumps by the efforts of our company's every worker no matter the professional expert or the 24 hours online services. We are so proud that we own the high pass rate to 99%. This data depend on the real number of our worthy customers who bought our Cloud-Deployment-and-Operations Study Guide and took part in the real Cloud-Deployment-and-Operations exam. Obviously, their performance is wonderful with the help of our outstanding Cloud-Deployment-and-Operations learning materials.

## WGU Cloud Deployment and Operations Sample Questions (Q19-Q24):

### NEW QUESTION # 19

(Which service should be used to schedule the patching of EC2 instances and on-premises servers with security updates?)

- A. App Runner
- **B. Systems Manager**
- C. EventBridge
- D. Config

**Answer: B**

Explanation:

AWS Systems Manager should be used to schedule the patching of EC2 instances and on-premises servers with security updates, utilizing features like Patch Manager and maintenance windows. This service supports hybrid environments and automated patch deployment. The WGU Cloud Deployment and Operations Study Guide (Section 5.2, Systems Manager Patch Manager) states, "Systems Manager provides Patch Manager to schedule and deploy security updates to EC2 instances and on-premises servers during maintenance windows, ensuring consistent patching across hybrid environments." EventBridge, Config, and App Runner do not offer this patching capability.

### NEW QUESTION # 20

(What is the role of a patch baseline in Patch Manager?)

- A. Assigns an IAM role for services that can auto-approve patches upon release
- B. Notifies Config of any patch updates that need to be performed
- **C. Defines patches that should and should not be installed on EC2 instances**
- D. Installs all patch updates as they become available by default

**Answer: C**

Explanation:

A patch baseline in Patch Manager defines the patches that should and should not be installed on EC2 instances, specifying approval rules for security updates, other updates, and exclusions. This ensures controlled and compliant patching. The WGU Cloud Deployment and Operations Study Guide (Section 5.2, Patch Manager) states, "A patch baseline specifies which patches are approved for installation and which are excluded, allowing customization of patch deployment (e.g., approving only critical security updates)." Options A, B, and D misrepresent the baseline's role, as it does not auto-install, assign IAM roles, or notify Config directly.

### NEW QUESTION # 21

(A company uses SQS and EC2 to convert videos uploaded by users. In the evenings, videos take several hours to convert when they normally take minutes. The user base is expected to grow a hundredfold in the next 12 months. Which solution should be used to reduce the conversion delays?)

- A. Use spot instances instead of on-demand
- B. Switch from t2.medium to t2.xlarge instance type
- C. Implement a dead-letter queue
- **D. Configure an alarm to scale the fleet based on queue length**

**Answer: D**

Explanation:

To reduce conversion delays caused by increased demand, the company should configure a CloudWatch alarm to scale the EC2 fleet based on the SQS queue length. This auto-scaling approach dynamically adjusts the number of EC2 instances to handle the workload, especially during peak evening hours and anticipated growth. The WGU Cloud Deployment and Operations Study Guide (Section 3.3, Auto Scaling and SQS) explains, "Auto Scaling can be triggered by a CloudWatch alarm monitoring SQS queue depth, ensuring the EC2 fleet scales out to process video conversion tasks efficiently as the queue length increases." Spot instances, dead-letter queues, and instance type upgrades do not directly address dynamic scaling needs.

#### NEW QUESTION # 22

(Which performance optimization method must be used when uploading files larger than 5 GB to S3?)

- A. Glacier Select
- B. Transfer Acceleration
- C. Multipart uploads
- D. Intelligent-Tiering

**Answer: C**

Explanation:

Multipart uploads must be used when uploading files larger than 5 GB to Amazon S3, as this method splits the file into smaller parts for parallel upload, improving reliability and performance. The WGU Cloud Deployment and Operations Study Guide (Section 2.1, S3 Uploads) states, "For files exceeding 5 GB, multipart upload is required in S3, allowing the file to be divided into parts (minimum 5 MB each) for concurrent uploads, ensuring efficient and resumable transfers." Glacier Select, Transfer Acceleration, and Intelligent-Tiering are not designed for this upload optimization.

#### NEW QUESTION # 23

(Which solution is used to protect a server from Layer 7 attacks?)

- A. Shield
- B. CloudWatch
- C. WAF
- D. KMS key rotation

**Answer: C**

Explanation:

AWS WAF (Web Application Firewall) is used to protect a server from Layer 7 (application layer) attacks, such as SQL injection or cross-site scripting, by filtering HTTP/HTTPS traffic based on defined rules. The WGU Cloud Deployment and Operations Study Guide (Section 6.2, AWS WAF) states, "WAF protects web applications at Layer 7 by inspecting and blocking malicious requests, such as those involving SQL injection or XSS, when integrated with ALB or CloudFront." Shield protects against DDoS (Layer 3/4), CloudWatch monitors metrics, and KMS key rotation manages encryption, none of which address Layer 7 attacks.

#### NEW QUESTION # 24

.....

In recent years, fierce competition agitates the forwarding IT industry in the world. And IT certification has become a necessity. If you want to get a good improvement in your career, The method that using the Actual4test's WGU Cloud-Deployment-and-Operations Exam Training materials to obtain a certificate is very feasible. Our exam materials are including all the questions which the exam required. So the materials will be able to help you to pass the exam.
