Now they have become certified Certificate of Cloud Security Knowledge (v4.0) Exam Certification Exam experts and pursue a rewarding career in the top world brands. You can also trust top-notch and easy-to-use Cloud Security Alliance CCSK practice test questions. The Certificate of Cloud Security Knowledge (v4.0) Exam (CCSK) exam questions are checked and verified by experienced and qualified Certificate of Cloud Security Knowledge (v4.0) Exam (CCSK) exam trainers. They have years of experience and knowledge to collect, design, and answer the real Certificate of Cloud Security Knowledge (v4.0) Exam (CCSK) exam questions.

The CCSK certification is designed for IT and security professionals, including architects, engineers, consultants, and managers, who are responsible for securing cloud computing environments. Certificate of Cloud Security Knowledge (v4.0) Exam certification exam is vendor-neutral, meaning that it is not tied to any specific cloud platform or technology, and is based on the CSA's Cloud Security Guidance v4.0, which is the most comprehensive guide to cloud security best practices available today. Obtaining the CCSK certification demonstrates a commitment to cloud security and provides professionals with the knowledge and skills necessary to effectively secure cloud computing environments.

The CCSK Exam is a globally recognized certification that validates an individual's understanding of cloud security concepts and best practices. CCSK exam is designed for individuals who are responsible for cloud security within their organizations and covers a broad range of topics. CCSK exam is delivered online, is available in multiple languages, and is open-book. The CCSK exam is an excellent way for individuals to demonstrate their expertise and knowledge in cloud security.

Reliable Cloud Security Alliance CCSK Learning Materials, CCSK New Study Plan

ITPassLeader is a platform that will provide candidates with most effective CCSK study materials to help them pass their CCSK exam. It has been recognized by all of our customers, because it was compiled by many professional experts of our website. Not only did they pass their CCSK Exam but also got a satisfactory score. These are due to the high quality of our CCSK study torrent that leads to such a high pass rate as more than 98%. You will never feel disappointment about our CCSK exam questions.

Cloud Security Alliance Certificate of Cloud Security Knowledge (v4.0) Exam Sample Questions (Q253-Q258):

NEW QUESTION # 253

Which of the following cloud computing models primarily provides storage and computing resources to the users?

- A. Software as a Service (SaaS)
- B. Function as a Service (FaaS)
- **C. Infrastructure as a Service (IaaS)**
- D. Platform as a Service (PaaS)

Answer: C

Explanation:

Infrastructure as a Service (IaaS) primarily provides users with storage, computing resources, and networking capabilities. In the IaaS model, cloud providers offer virtualized computing resources over the internet. Users can rent servers, storage, and networking equipment without needing to manage the physical hardware themselves. This allows for flexible scaling and resource management according to the users' needs.

FaaS focuses on serverless computing where users run code in response to events. PaaS provides a platform that allows users to develop, run, and manage applications without worrying about the underlying infrastructure. SaaS delivers fully managed applications over the internet, where users access software without managing the infrastructure.

NEW QUESTION # 254

What is a common characteristic of default encryption provided by cloud providers for data at rest?

- A. It always requires the customer's own encryption keys
- **B. It uses the cloud provider's keys, often at no additional cost**
- C. It is not available without an additional premium service
- D. It does not support encryption for data at rest

Answer: B

Explanation:

Many cloud providers offer default encryption for data at rest, which is typically enabled automatically for data stored within the cloud. In these cases, the encryption is often done using the cloud provider's keys as part of the provider's security infrastructure, and it is usually provided at no additional cost to the customer. This ensures that data is protected while at rest, reducing the risk of unauthorized access.

NEW QUESTION # 255

What's the difference between DNS Logs and Flow Logs?

- A. They represent the logging of different networking solutions, and DNS Logs are more suitable for a ZTA implementation
- B. They play identical functions and can be used interchangeably
- **C. DNS Logs record domain name resolution requests and responses, while Flow Logs record info on source, destination, protocol**
- D. DNS Logs record all the information about the network behavior, including source, destination, and protocol, while Flow Logs record users' applications behavior

Answer: C

Explanation:

DNS logs capture information on domain name resolution, while Flow logs capture details about network traffic, including source, destination, and protocol. Reference: [CCSK Study Guide, Domain 7 - Infrastructure & Networking]

NEW QUESTION # 256

In federated identity management, what role does the identity provider (IdP) play in relation to the relying party?

- A. The IdP and relying party have no direct trust relationship.
- B. The relying party makes assertions to the IdP about user authorizations.
- C. The IdP relies on the relying party to authenticate and authorize users.
- **D. The IdP makes assertions to the relying party after building a trust relationship.**

Answer: D

Explanation:

In federated identity management, the identity provider (IdP) is responsible for authenticating users and making assertions about their identity to the relying party (which could be a service or application that trusts the IdP). The IdP and the relying party establish a trust relationship in advance, which allows the IdP to assert that a user is authenticated, often in the form of security tokens or assertions like SAML or OpenID Connect.

The IdP that authenticates users and makes assertions, not the relying party. The relying party does not make assertions to the IdP; the relying party relies on assertions made by the IdP. The IdP and relying party do have a direct trust relationship in federated identity management.

NEW QUESTION # 257

Which activity is a critical part of the Post-Incident Analysis phase in cybersecurity incident response?

- **A. Documenting lessons learned and improving future responses**
- B. Isolating affected systems
- C. Restoring services to normal operations
- D. Notifying affected parties

Answer: A

Explanation:

Documenting lessons learned is essential in the post-incident phase, as it helps improve future incident response processes.

Reference: [Security Guidance v5, Domain 11 - Incident Response]

NEW QUESTION # 258

.....

Laziness will ruin your life one day. It is time to have a change now. Although we all love cozy life, we must work hard to create our own value. Then our CCSK training materials will help you overcome your laziness. Study is the best way to enrich your life. On one hand, you may learn the newest technologies in the field with our CCSK Study Guide to help you better adapt to your work, and on the other hand, you will pass the CCSK exam and achieve the certification which is the symbol of competence.
