CLT New Learning Materials, Latest CLT Test Labs

The MSSC CLT practice exam software of ActualVCE has questions that have a striking resemblance to the queries of the Certified Logistics Technician (CLT) 4.0 (CLT) real questions. It has a user-friendly interface. You don't require an active internet connection to run it once the CLT Practice Test software is installed on Windows computers and laptops.

MSSC Certified Logistics Technician (CLT) 4.0 Sample Questions (Q56-Q61):

NEW QUESTION # 56

The height of a ceiling is 120 feet. How high is it in meters?

1 yard = 0.914 meters

1 meter = 1.09 yards

- A. 36.7
- B. 43.6
- C. 130.8
- D. 109.76

Answer: A

Explanation:

CLT 4.0 emphasizes that logistics technicians must be comfortable with metric and U.S. customary unit conversions, as

measurements affect storage design, equipment compatibility, and international shipping accuracy. To convert feet to meters:
1 yard = 3 feet \rightarrow 120 ft = 40 yards.

Using 1 yard = 0.914 meters \rightarrow 40 \times 0.914 = 36.56 meters, which rounds to 36.7 meters.

This conversion skill is critical when dealing with international specifications, as most global logistics operations use the metric system. Accurate conversions ensure correct space allocation, equipment clearances, and freight measurement for weight/volume-based shipping charges. Miscalculations can cause costly errors such as overloading, improper stacking, or container space misjudgment. CLT 4.0 modules in "Measurements and Conversions" stress accuracy in these calculations for operational safety and efficiency.

NEW QUESTION # 57

Aggregate Inventory Management involves managing the inventory

- A. according to the capacity of the available storage space
- B. according to quarterly sales
- C. at the level of the entire inventory of a warehouse or distribution center
- D. at the individual item level

Answer: C

Explanation:

Aggregate Inventory Management refers to controlling inventory at the macro level across a facility or network, rather than by individual item. CLT "Inventory Control" defines it as establishing overall inventory objectives, determining total value or volume levels, and balancing customer service with carrying cost. This high-level management informs decisions about replenishment frequency, safety stock, and investment limits. In contrast, individual item control-often handled through systems like ABC analysis or cycle counting-focuses on micro management. Aggregate management supports strategic planning, budgeting, and forecasting for the entire operation. CLT emphasizes that effective aggregate control maintains inventory optimization, reduces overstock, and ensures alignment between supply, demand, and organizational goals.

NEW QUESTION # 58

Which system is used to document the activities and locations of trailers or containers?

- A. Yard Management System (YMS)
- B. Material Requirements Planning (MRP) Software
- C. Inventory Management System (IMS)
- D. Enterprise Resource Planning (ERP)

Answer: A

Explanation:

A Yard Management System (YMS) is a logistics tool used to manage the movement, location, and status of trailers and containers within a distribution center's yard. CLT 4.0 describes YMS as an extension of warehouse management, providing real-time visibility into trailer positions, load status, and dock assignments. It coordinates yard jockey movements and reduces congestion, dwell time, and detention fees. Unlike an IMS or ERP-which manage inventory or enterprise data-YMS specifically enhances outbound/inbound trailer efficiency. It often integrates with WMS (Warehouse Management System) and TMS (Transportation Management System) for seamless dock scheduling and carrier communication.

NEW QUESTION # 59

Which document does NOT contain the weight of goods for preparation of loading a trailer or container?

- A. Packing List
- B. Manifest
- C. Trucker Receipt
- D. Delivery Receipt

Answer: D

Explanation:

The Delivery Receipt is primarily used to acknowledge that the consignee has received the shipment in good condition, noting

exceptions such as damage or shortage. Unlike manifests or packing lists, it does not normally include the specific weight of goods. CLT 4.0 notes that documents such as the manifest, bill of lading, or packing list are used in load planning and verification, as they include cargo weights and cubic measurements necessary for balancing, equipment selection, and safety compliance. The delivery receipt focuses on the "proof of delivery" function within final-mile operations, forming part of the carrier's record of completed service. Proper documentation flow between warehouse, carrier, and consignee ensures accountability and accuracy at every handoff point in the logistics chain.

NEW QUESTION # 60

A substance or material that is capable of posing an unreasonable risk to health, safety, and property when transported in commerce is

- A. dangerous goods
- B. PHMSA
- C. HAZCOM
- D. HAZMAT

Answer: D

Explanation:

CLT uses the U.S. term "hazardous material (HAZMAT)" for substances posing unreasonable risks in transportation; internationally the term "dangerous goods" is common. PHMSA is the regulating agency within USDOT, and HAZCOM refers to OSHA's Hazard Communication standard, not the material itself. Thus, the definition aligns with HAZMAT.
