Wie viel wissen Sie über ZertSoft? Haben Sie Prüfungsfragen und Antworten zur CompTIA CNX-001 IT-Zertifizierung von ZertSoft benutzt? Oder Haben Sie von anderen die ZertSoft Prüfungsunterlagen gehört? Als der professionelle Lieferant der IT-Zertifizierungsprüfungen, ist ZertSoft unbedingt die beste Website, die Sie nie gesehen haben. Warum sind wir so zuversichtlich? Weil es keine andere Website wie wir ZertSoft gibt, die die besten CNX-001 Unterlagen und den besten Service anbieten.

CompTIA CNX-001 Prüfungsplan:

Thema	Einzelheiten
Thema 1	• Network Troubleshooting: This section of the exam measures the skills of Network Support Engineers and covers diagnosing and resolving connectivity and performance issues across various network layers. It focuses on identifying root causes, using diagnostic tools, and applying systematic troubleshooting methodologies. The goal is to ensure that professionals can minimize downtime, restore service quickly, and prevent recurring problems by maintaining a resilient and stable network environment.

Thema 2	• Network Architecture Design: This section of the exam measures the skills of Network Architects and covers the ability to design scalable, secure, and efficient network architectures. It focuses on understanding design principles, selecting appropriate network components, and aligning architecture decisions with organizational needs. Candidates are expected to demonstrate a solid grasp of topology planning, high-availability configurations, and integration of cloud and on-premise systems to ensure reliability and performance.
Thema 3	• Network Operations, Monitoring, and Performance: This section of the exam measures skills of Network Operations Specialists and covers day-to-day operational management of network environments. It involves configuring monitoring tools, analyzing performance data, and responding to alerts. Candidates are evaluated on their ability to maintain network health, optimize throughput, and ensure consistent uptime by applying best practices for proactive performance tuning and operations management.
Thema 4	• Network Security: This section of the exam measures the skills of Security Engineers and covers core practices for protecting network infrastructure. It includes applying firewall rules, implementing access control measures, and designing secure segmentation strategies. The content emphasizes threat mitigation techniques, secure configuration of networking devices, and adherence to compliance frameworks, preparing professionals to safeguard both internal and external network assets effectively.

CNX-001 Exam Fragen - CNX-001 Online Prüfungen

Mit langjähriger Forschung im Gebiet der IT-Zertifizierungsprüfung spielen wir ZertSoft eine führende Rolle in diesem Gewerbe. Die Softwares, die wir entwickeln, sind umfassend und enthalten große Menge Prüfungsaufgaben. CompTIA CNX-001 Prüfungssoftware ist eine der Bestseller. Sie hilft gut die Prüfungsteilnehmer, die CompTIA CNX-001 zu bestehen. Und es ist allgemein bekannt, dass mit die CompTIA CNX-001 Zertifizierung wird Ihre Karriere im IT-Gewerbe leichter sein!

CompTIA CloudNetX Certification Exam CNX-001 Prüfungsfragen mit Lösungen (Q76-Q81):

76. Frage

End users are getting certificate errors and are unable to connect to an application deployed in a cloud. The application requires HTTPS connection. A network solution architect finds that a firewall is deployed between end users and the application in the cloud. Which of the following is the root cause of the issue?

- A. The end users do not have certificates on their laptops.
- B. The firewall has port 443 blocked while SSL/HTTPS inspection is enabled.
- C. The firewall on the application server has port 443 blocked.
- **D. The firewall has an expired certificate while SSL/HTTPS inspection is enabled.**

Antwort: D

Begründung:

When SSL inspection is turned on, the firewall intercepts and re-signs HTTPS traffic with its own certificate.

If that certificate has expired, end users will see certificate errors even though port 443 is open and the backend application's certificate is valid.

77. Frage

An architect needs to deploy a new payroll application on a cloud host. End users' access to the application will be based on the end users' role. In addition, the host must be deployed on the 192.168.77.32/30 subnet.

Which of the following Zero Trust elements are being implemented in this design? (Choose two.)

- A. CASB
- B. WAF
- **C. Least privilege**

- D. MFA
- E. Device trust
- **F. Microsegmentation**

Antwort: C,F

Begründung:

Least privilege: Granting users access to the payroll app strictly according to their roles enforces the principle of least privilege.

Microsegmentation: Placing the host in its own 192.168.77.32/30 subnet isolates it from other workloads, achieving microsegmentation.

78. Frage

End users are getting certificate errors and are unable to connect to an application deployed in a cloud. The application requires HTTPS connection. A network solution architect finds that a firewall is deployed between end users and the application in the cloud. Which of the following is the root cause of the issue?

- A. The end users do not have certificates on their laptops.
- B. The firewall has port 443 blocked while SSL/HTTPS inspection is enabled.
- C. The firewall on the application server has port 443 blocked.
- **D. The firewall has an expired certificate while SSL/HTTPS inspection is enabled.**

Antwort: D

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

When SSL/HTTPS inspection is enabled on a firewall, it intercepts and decrypts HTTPS traffic. This requires the firewall to present its own trusted certificate to the client device. If that certificate is expired, the client browser will display a certificate error and block access to the application. This is a common misconfiguration that breaks HTTPS communication.

Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "TLS/SSL Inspection and Certificate Management": "SSL inspection appliances must have valid certificates installed. Expired or untrusted certificates will result in browsers rejecting the HTTPS session and displaying errors to users." Other options:

- * A. Would prevent connection, but not result in certificate errors.
- * B. Blocked port 443 would prevent any connection, not cause cert errors.
- * C. Client-side certificates are not required unless mutual TLS is configured, which is not stated here.

79. Frage

A company deployed new applications in the cloud and configured a site-to-site VPN to connect the internal data center with the cloud. The IT team wants the internal servers to connect to those applications without using public IP addresses. Which of the following is the best solution?

- A. Register applications on the cloud with a public DNS server and configure internal servers to connect to them using their public DNS names.
- B. Configure proxy service in the site-to-site VPN to allow internal servers to access applications through the proxy.
- **C. Create a DNS server in the cloud. Configure the DNS server in the customer data center to forward DNS requests for cloud resources to the cloud DNS server.**
- D. Configure a NAT server on the cloud to allow internal servers to connect to the applications through the NAT server.

Antwort: C

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

To allow private IP-based communication between internal servers and cloud applications over a site-to-site VPN, private DNS resolution is necessary. The internal DNS server can be configured to forward specific DNS queries (for cloud-based applications) to a DNS server located in the cloud. This ensures applications can be resolved to private IPs, not public ones.

Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "Hybrid Networking and DNS Integration":

"To support name resolution over hybrid connections like site-to-site VPN, enterprises should configure conditional forwarding to cloud-based DNS servers. This allows internal devices to resolve private IP addresses for cloud-based resources." Other options:

- * B. NAT introduces complexity and may hide source IPs, which is not required in this case.
- * C. Public DNS names map to public IPs, violating the requirement.

* D. A proxy is not needed if direct private IP-based access is available via VPN.

80. Frage

A network engineer identified several failed log-in attempts to the VPN from a user's account. When the engineer inquired, the user mentioned the IT help desk called and asked them to change their password.

Which of the following types of attacks occurred?

- A. On-path
- B. Initialization vector
- C. Evil twin
- **D. Social engineering**

Antwort: D

Begründung:

Comprehensive and Detailed Explanation From Exact Extract:

This scenario describes a classic example of social engineering. An attacker impersonated the help desk and convinced the user to change their password, likely to one the attacker controlled. Social engineering attacks manipulate human behavior to bypass technical security measures.

Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "Social Engineering Threats":

"Social engineering involves manipulating individuals to perform actions or divulge confidential information, such as passwords, often by impersonating trusted entities like IT support." Other options:

- * A. Initialization vector relates to encryption vulnerabilities.
- * B. On-path (formerly man-in-the-middle) requires network interception, which is not described here.
- * C. Evil twin is a rogue Wi-Fi AP attack, not applicable to this VPN login context.

81. Frage

.....

ZertSoft ist eine Website, die Fragenkataloge zur CNX-001 -Zertifizierungsprüfung bietet. Seine Erfolgsquote beträgt 100%. Das ist der Grund dafür, warum viele Kandidaten ZertSoft glauben. ZertSoft kümmert sich immer um die Bedürfnisse der Kandidaten und versucht, ihre Bedürfnisse abzudecken. Mit ZertSoft werden Sie sicher eine glänzende Zukunft haben.

CNX-001 Exam Fragen: <https://www.zertsoft.com/CNX-001-pruefungsfragen.html>

- CNX-001 CompTIA CloudNetX Certification Exam Pass4sure Zertifizierung - CompTIA CloudNetX Certification Exam zuverlässige Prüfung Übung □ Suchen Sie auf « www.zertpruefung.de » nach kostenlosem Download von □ CNX-001 □ □CNX-001 Prüfungsunterlagen
- CNX-001 CompTIA CloudNetX Certification Exam neueste Studie Torrent - CNX-001 tatsächliche prep Prüfung □ URL kopieren ☼ www.itzert.com □ ☼ □ Öffnen und suchen Sie ▷ CNX-001 ◁ Kostenloser Download □CNX-001 Zertifizierung
- Die seit kurzem aktuellsten CompTIA CNX-001 Prüfungsunterlagen, 100% Garantie für Ihren Erfolg in der CompTIA CloudNetX Certification Exam Prüfungen! □ Suchen Sie auf der Webseite ➡ www.pruefungfrage.de □ nach [CNX-001] und laden Sie es kostenlos herunter □CNX-001 Prüfungen
