CNX-001 Question Explanations | Printable CNX-001 PDF

You can easily download these formats of CompTIA CNX-001 actual dumps and use them to prepare for the CompTIA CNX-001 certification test. You do not need to enroll yourself in expensive CNX-001 Exam Training classes. With the CompTIA CNX-001 valid dumps, you can easily prepare well for the actual CompTIA CloudNetX Certification Exam exam at home.

Once you establish your grip on our CNX-001 exam materials, the real exam questions will be a piece of cake for you. There are three different versions of our CNX-001 study questions for you to choose: the PDF, Software and APP online. Though the displays are totally different, the content of the CNX-001 Practice Guide is the same. You can pass the exam with no matter whice version you want to buy.

>> CNX-001 Question Explanations <<

Printable CNX-001 PDF - Simulation CNX-001 Questions

Compared with other products, one of the advantages of CNX-001 Exam Braindumps is that we offer you free update for 365 days after purchasing. In this condition, you needn't have to spend extra money for the updated version. You just need to spend some money, so you can get the updated version in the following year. It's quite cost-efficient for you. Besides if we have the updated version, our system will send it to you automatically.

CompTIA CloudNetX Certification Exam Sample Questions (Q74-Q79):

NEW QUESTION # 74
A company is experiencing multiple switch failures. The network analyst discovers the following:
Network recovery time is unacceptable and occurs after the shutdown of some switches.
Some loops were detected in the network.
No broadcast storm was detected.
Which of the following is the most cost-effective solution?

- A. Add multiple VLANs.
- B. Add a new Layer 3 switch.
- C. Implement tagging.
- D. Implement STP.

Answer: D

Explanation:
Spanning Tree Protocol prevents and automatically resolves layer-2 loops without requiring new hardware. It also improves convergence times after a link or switch failure, meeting the recovery and loop-avoidance requirements most cost-effectively.

NEW QUESTION # 75

A network administrator recently deployed new Wi-Fi 6E access points in an office and enabled 6GHz coverage. Users report that when they are connected to the new 6GHz SSID, the performance is worse than the 5GHz SSID. The network administrator suspects that there is a source of 6GHz interference in the office.

Using the troubleshooting methodology, which of the following actions should the network administrator do next?

- A. Test to see if the changes have improved network performance.
- B. Change the channels being used by the 6GHz radios in the APs.
- C. Document the list of channels that are experiencing interference.
- D. Use a spectrum analyzer and check the 6GHz spectrum.

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

Using a spectrum analyzer to inspect the 6GHz frequency range allows the administrator to confirm the presence and source of interference. This step aligns with the "identify the problem" phase of the CompTIA troubleshooting methodology. Before making changes or documenting channels, the administrator must validate whether interference exists and collect diagnostic data.

Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "Troubleshooting Methodology and Wireless Interference":

"Spectrum analyzers provide a visual representation of frequency usage and interference in wireless bands, allowing administrators to isolate the root cause of degraded performance before implementing corrective actions." Other options:

* A. Testing performance (Step 5 in the methodology) comes after identifying and resolving the issue.

* C. Documentation is performed during the final step of troubleshooting.

* D. Changing channels without evidence may worsen interference if the problem is not confirmed.

NEW QUESTION # 76

A network architect must design a new branch network that meets the following requirements:

* No single point of failure

* Clients cannot be impacted by changes to the underlying medium

* Clients must be able to communicate directly to preserve bandwidth

Which of the following network topologies should the architect use?

- A. Hub-and-spoke
- B. Mesh
- C. Star
- D. Spine-and-leaf

Answer: B

Explanation:

Comprehensive and Detailed Explanation From Exact Extract:

A Mesh topology provides multiple redundant paths between all nodes, ensuring there is no single point of failure. Clients can communicate directly with each other without passing through a central hub, reducing bottlenecks and preserving bandwidth. Mesh networks are fault tolerant and resilient to changes in the underlying medium, making them ideal for distributed environments requiring high availability.

Relevant Extract from CompTIA CloudNetX CNX-001 Study Guide - under "WAN and LAN Topologies":

"In a mesh topology, every device is connected to every other device. This design offers fault tolerance and allows for direct communication paths between endpoints, maximizing bandwidth efficiency and eliminating single points of failure." Other options:

* A. Hub-and-spoke introduces a central point of failure and may limit bandwidth.

* C. Spine-and-leaf is ideal for data centers but not typically used for branch office designs.

* D. Star topology relies on a central switch and has a single point of failure.

NEW QUESTION # 77

A network architect needs to design a solution to ensure every cloud environment network is built to the same baseline. The solution must meet the following requirements:

Use automated deployment.

Easily update multiple environments.

Share code with a community of practice.

Which of the following are the best solutions? (Choose two.)

- A. CI/CD pipelines
- B. Public code repository
- C. Deployment guides
- D. Deployment runbooks
- E. Automated image deployment
- F. Private code repository

Answer: A,B

Explanation:
CI/CD pipelines: Automate the provisioning and configuration of network baselines across all environments, and make it easy to roll out updates consistently.
Public code repository: Enables your community of practice to collaborate, review, and contribute to shared IaC modules and templates, while making updates discoverable and reusable.

NEW QUESTION # 78
A company's IT department is expected to grow from 100 to 200 employees, and the sales department is expected to grow from 1,000 to a maximum of 2,000 employees. Each employee owns a single laptop with a single IP allocated. The network architect wants to deploy network segmentation using the IP range 10.0.0.0
/8. Which of the following is the best solution?

- A. Allocate 10.1.0.0/22 to the IT department. Allocate 10.2.0.0/15 to the sales department.
- B. Allocate 10.1.0.0/16 to the IT department. Allocate 10.2.1.0/25 to the sales department.
- C. Allocate 10.1.0.0/16 to the IT department. Allocate 10.2.1.0/24 to the sales department.
- D. Allocate 10.1.0.0/30 to the IT department. Allocate 10.2.0.0/16 to the sales department.

Answer: A

Explanation:
A /22 gives you 1,022 usable addresses, ample headroom for 200 IT laptops, while a /15 yields 32,766 addresses, covering up to 2,000 sales laptops with room to grow, all within the 10.0.0.0/8 space.

NEW QUESTION # 79
......

In fact, in real life, we often use performance of high and low to measure a person's level of high or low, when we choose to find a good job, there is important to get the CNX-001 certification as you can. Our product is elaborately composed with major questions and answers. We are choosing the key from past materials to finish our CNX-001 Guide question. It only takes you 20 hours to 30 hours to do the practice. After your effective practice, you can master the examination point from the CNX-001 test question. Then, you will have enough confidence to pass it.
