Our company constantly increases the capital investment on the research and innovation of our Professional-Cloud-Database-Engineer training materials and expands the influences of our Professional-Cloud-Database-Engineer study materials in the domestic and international market. Because the high quality and passing rate of our Professional-Cloud-Database-Engineer Practice Questions more than 98 percent that clients choose to buy our study materials when they prepare for the test Professional-Cloud-Database-Engineer certification. We have established a good reputation among the industry and the constantly-enlarged client base.

If you are really not sure which version you like best, you can also apply for multiple trial versions of our Professional-Cloud-Database-Engineer exam questions. We want our customers to make sensible decisions and stick to them. Professional-Cloud-Database-Engineer study engine can be developed to today, and the principle of customer first is a very important factor. Professional-Cloud-Database-Engineer Training Materials really hope to stand with you, learn together and grow together.

Professional-Cloud-Database-Engineer Latest Braindumps Questions | Professional-Cloud-Database-Engineer Test Pattern

Prep4sureGuide also provides easy to use Professional-Cloud-Database-Engineer practice test brain dump preparation software for Professional-Cloud-Database-Engineer. Moreover, after the date of purchase of the Professional-Cloud-Database-Engineer testing engine, you will receive free updates for 90 days. The Professional-Cloud-Database-Engineer dumps practice test software is easy to install and has a simple interface. The practice test software for Professional-Cloud-Database-Engineer Exam provides a real feel of an exam and allows you to test your skills for the exam. The Professional-Cloud-Database-Engineer software comes with multiple features including the self-assessment feature. You will get free updates for 90 days after the purchase date that will allow you to get latest and well-curated questions for the Professional-Cloud-Database-Engineer exam.

Google Cloud Certified - Professional Cloud Database Engineer Sample Questions (Q129-Q134):

NEW QUESTION # 129

You are configuring a brand new PostgreSQL database instance in Cloud SQL. Your application team wants to have an optimal and highly available environment with automatic failover to avoid any unplanned outage. What should you do?

- A. Create two read-write Cloud SQL instances in two different zones with a standby instance in another region.
- B. Create two read-write Cloud SQL instances in two different regions with a standby instance in another zone.
- C. Create one regional Cloud SQL instance with a read replica in another region.
- D. Create one regional Cloud SQL instance in one zone with a standby instance in another zone in the same region.

Answer: D

Explanation:

This answer is correct because it meets the requirements of having an optimal and highly available environment with automatic failover. According to the Google Cloud documentation¹, a regional Cloud SQL instance is an instance that has a primary server in one zone and a standby server in another zone within the same region. The primary and standby servers are kept in sync using synchronous replication, which ensures zero data loss and minimal downtime in case of a zonal outage or an instance failure. If the primary server becomes unavailable, Cloud SQL automatically fails over to the standby server, which becomes the new primary server¹.

NEW QUESTION # 130

Your team uses thousands of connected IoT devices to collect device maintenance data for your oil and gas customers in real time. You want to design inspection routines, device repair, and replacement schedules based on insights gathered from the data produced by these devices. You need a managed solution that is highly scalable, supports a multi-cloud strategy, and offers low latency for these IoT devices. What should you do?

- A. Use Cloud Spanner with Data Studio.
- B. Use MongoDB Atlas with Charts.
- C. Use Firestore with Looker.
- D. Use Bigtable with Looker.

Answer: B

Explanation:

This scenario has BigTable written all over it - large amounts of data from many devices to be analysed in realtime. I would even argue it could qualify as a multicloud solution, given the links to HBASE. BUT it does not support SQL queries and is not therefore compatible (on its own) with Looker. Firestore + Looker has the same problem. Spanner + Data Studio is at least a compatible pairing, but I agree with others that it doesn't fit this use-case - not least because it's Google-native. By contrast, MongoDB Atlas is a managed solution (just not by Google) which is compatible with the proposed reporting tool (Mongo's own Charts), it's specifically designed for this type of solution and of course it can run on any cloud.

NEW QUESTION # 131

You are deploying a new Cloud SQL instance on Google Cloud using the Cloud SQL Auth proxy. You have identified snippets of application code that need to access the new Cloud SQL instance. The snippets reside and execute on an application server running on a Compute Engine machine. You want to follow Google- recommended practices to set up Identity and Access Management (IAM) as quickly and securely as possible.

What should you do?

- A. For each application code, set up a dedicated user account.
- B. For the application server, set up a common shared user account.
- C. For the application server, set up a service account.
- D. For each application code, set up a common shared user account.

Answer: C

Explanation:

<https://cloud.google.com/sql/docs/mysql/sql-proxy#using-a-service-account>

NEW QUESTION # 132

You have a large Cloud SQL for PostgreSQL instance. The database instance is not mission-critical, and you want to minimize operational costs. What should you do to lower the cost of backups in this environment?

- A. Set the automated backups to occur every other day to lower the frequency of backups.
- **B. Reduce the number of automated backups that are retained to two (2).**
- C. Select a different region to store your backups.
- D. Change the storage tier of the automated backups from solid-state drive (SSD) to hard disk drive (HDD).

Answer: B

Explanation:

By default, for each instance, Cloud SQL retains seven automated backups, in addition to on-demand backups. You can configure how many automated backups to retain (from 1 to 365). We charge a lower rate for backup storage than for other types of instances. <https://cloud.google.com/sql/docs/mysql/backup-recovery/backups>

NEW QUESTION # 133

You are designing a database strategy for a new web application in one region. You need to minimize write latency. What should you do?

- A. Use high availability (HA) Cloud SQL with multiple zones.
- **B. Use Cloud Spanner in a regional configuration.**
- C. Use Cloud SQL with cross-region replicas.
- D. Use zonal Cloud SQL without high availability (HA).

Answer: B

Explanation:
