### NEW QUESTION # 208

The administrator at Universal Containers has been asked to create an account management dashboard displaying opportunities and activities for each of its top five clients.

Which dashboard feature should the Administrator use to meet this requirement?

- A. Joined reports on a dashboard
- B. Matrix reports on a dashboard
- C. Dynamic dashboard
- D. Dashboard Filter

**Answer: A**

### NEW QUESTION # 209

How should an administrator accomplish this?

- A. Write record-triggered flows whenever Room records are related, modified, or deleted.
- B. Create a roll-up summary field on Room.
- C. Configure a roll-up summary field on Equipment.
- D. Make record-triggered flows whenever Equipment records are created, modified or deleted.

**Answer: B**

Explanation:

A roll-up summary field is a type of field that calculates values from related records and displays them on the parent record. A roll-up summary field can be used to count, sum, min, or max values from child records. You can create a roll-up summary field on an object that has a master-detail relationship with another object. In this case, you can create a roll-up summary field on Room that

counts the number of Equipment records related to it. References:

### NEW QUESTION # 210

An administrator at Universal Containers has been asked by the compliance team to understand and track various sensitivity levels for its data in Salesforce. The administrator has enabled Data Classification and configured appropriate sensitivity levels. The compliance team would like a report showing field level sensitivity and classification. What should the administrator recommend?

- A. Use the Data Classification Metadata list view.
- B. Create a custom Entity Definition and Field Definitions report type.
- **C. Run the standard Data Classification report.**
- D. Configure a custom Data Classification and Metadata report type.

**Answer: C**

Explanation:

Run the standard Data Classification report is what the administrator should recommend to the compliance team. Data Classification is a feature that allows administrators to flag where sensitive information is stored in Salesforce by assigning sensitivity and classification levels to fields. Data Classification also provides a standard report that shows field level sensitivity and classification for all fields in an org. The administrator can run this report and share it with the compliance team to meet their requirement.
