As everybody knows, the most crucial matter is the quality of GitHub Advanced Security GHAS Exam study question for learners. We have been doing this professional thing for many years. Let the professionals handle professional issues. So as for us, we have enough confidence to provide you with the best GitHub-Advanced-Security Exam Questions for your study to pass it. Only with strict study, we write the latest and the specialized study materials. We can say that our GitHub-Advanced-Security exam questions are the most suitable for examinee to pass the exam.

GitHub GitHub-Advanced-Security Exam Syllabus Topics:

Topic	Details
Topic 1	• Configure and use code scanning: This section of the exam measures skills of a DevSecOps Engineer and covers enabling and customizing GitHub code scanning with built-in or marketplace rulesets. Examinees must know how to interpret scan results, triage findings, and configure exclusion or override settings to reduce noise and focus on high-priority vulnerabilities.
Topic 2	• Describe the GHAS security features and functionality: This section of the exam measures skills of a GitHub Administrator and covers identifying and explaining the built-in security capabilities that GitHub Advanced Security provides. Candidates should be able to articulate how features such as code scanning, secret scanning, and dependency management integrate into GitHub repositories and workflows to enhance overall code safety.
Topic 3	• Configure and use dependency management: This section of the exam measures skills of a DevSecOps Engineer and covers configuring dependency management workflows to identify and remediate vulnerable or outdated packages. Candidates will show how to enable Dependabot for version updates, review dependency alerts, and integrate these tools into automated CI • CD pipelines to maintain secure software supply chains.

100% Pass Quiz 2025 High Hit-Rate GitHub GitHub-Advanced-Security: Composite Test GitHub Advanced Security GHAS Exam Price

The GitHub GitHub-Advanced-Security exam questions on the platform have been gathered by subject matter experts to ensure that they accurately reflect the format and difficulty level of the actual GitHub GitHub-Advanced-Security exam. This makes these GitHub Advanced Security GHAS Exam PDF Questions ideal for individuals looking to pass the GitHub GitHub-Advanced-Security Exam on their first try. You can evaluate the product with a free GitHub-Advanced-Security demo.

GitHub Advanced Security GHAS Exam Sample Questions (Q16-Q21):

NEW QUESTION # 16

Which alerts do you see in the repository's Security tab? (Each answer presents part of the solution. Choose three.)

- A. Dependabot alerts
- B. Code scanning alerts
- C. Secret scanning alerts
- D. Repository permissions
- E. Security status alerts

Answer: A,B,C

Explanation:

In a repository's Security tab, you can view:

- * Secret scanning alerts: Exposed credentials or tokens
- * Dependabot alerts: Vulnerable dependencies from the advisory database
- * Code scanning alerts: Vulnerabilities in code detected via static analysis (e.g., CodeQL) You won't see general "security status alerts" (not a formal category) or permission-related alerts here.

NEW QUESTION # 17

When configuring code scanning with CodeQL, what are your options for specifying additional queries? (Each answer presents part of the solution. Choose two.)

- A. Scope
- B. github/codeql
- C. Packs
- D. Queries

Answer: C,D

Explanation:

You can customize CodeQL scanning by including additional query packs or by specifying individual queries:

- * Packs: These are reusable collections of CodeQL queries bundled into a single package.
 - * Queries: You can point to specific files or directories containing .ql queries to include in the analysis.
- github/codeql refers to a pack by name but is not a method or field. Scope is not a valid field used for configuration in this context.

NEW QUESTION # 18

What is the first step you should take to fix an alert in secret scanning?

- A. Archive the repository.
- B. Remove the secret in a commit to the main branch.
- C. Revoke the alert if the secret is still valid.
- D. Update your dependencies.

Answer: C

Explanation:

The first step when you receive a secret scanning alert is to revoke the secret if it is still valid. This ensures the secret can no longer be used maliciously. Only after revoking it should you proceed to remove it from the code history and apply other mitigation steps. Simply deleting the secret from the code does not remove the risk if it hasn't been revoked - especially since it may already be exposed in commit history.

NEW QUESTION # 19

Which CodeQL query suite provides queries of lower severity than the default query suite?

- A. security-extended
- B. github/codeql-go/ql/src@main
- C. github/codeql/cpp/ql/src@main

Answer: A

Explanation:

The security-extended query suite includes additional CodeQL queries that detect lower severity issues than those in the default security-and-quality suite.

It's often used when projects want broader visibility into code hygiene and potential weak spots beyond critical vulnerabilities. The other options listed are paths to language packs, not query suites themselves.

NEW QUESTION # 20

A repository's dependency graph includes:

- A. Dependencies from all your repositories.
- B. Dependencies parsed from a repository's manifest and lock files.
- C. Annotated code scanning alerts from your repository's dependencies.
- D. A summary of the dependencies used in your organization's repositories.

Answer: B

Explanation:

The dependency graph in a repository is built by parsing manifest and lock files (like package.json, pom.xml, requirements.txt). It helps GitHub detect dependencies and cross-reference them with known vulnerability databases for alerting.

It is specific to each repository and does not show org-wide or cross-repo summaries.

NEW QUESTION # 21

.....

There may be customers who are concerned about the installation or use of our GitHub-Advanced-Security training questions. You don't have to worry about this. In addition to high quality and high efficiency, considerate service is also a big advantage of our company. We will provide 24 - hour online after-sales service to every customer. If you have any questions about installing or using our GitHub-Advanced-Security Real Exam, our professional after-sales service staff will provide you with warm remote service. As long as it is about our GitHub-Advanced-Security learning materials, we will be able to solve. Whether you're emailing or contacting us online, we'll help you solve the problem as quickly as possible. You don't need any worries at all.
