CompTIA 220-1102 is the second part of the CompTIA A+ Certification Exam that is required for candidates to obtain an A+ certification. 220-1102 exam is called the Core 2 exam and is focused on providing candidates with knowledge and skills related to operating systems, security, software troubleshooting, and operational procedures. 220-1102 Exam is designed to assess the candidate's ability to manage and maintain personal computer systems that run on different types of operating systems.

CompTIA A+ Certification Exam: Core 2 Sample Questions (Q620-Q625):

NEW QUESTION # 620

A user receives an error message on a Windows 10 device when trying to access a mapped drive from a Windows XP machine in the office. Other Windows XP devices in the office can access the drive. Which of the following Control Panel utilities should the user select to enable connectivity to the device?

- **A. Network and Sharing Center**
- B. Devices and Printers
- C. Administrative Tools
- D. Programs and Features

Answer: A

Explanation:

The Network and Sharing Center in the Control Panel is the central place to manage network connections and settings in Windows. When facing issues with accessing a mapped drive, this utility allows users to review and adjust network settings, making it possible to resolve connectivity problems. It provides options to view network status, set up new connections, change adapter settings, and troubleshoot network problems, which can help in enabling connectivity to the mapped drive on the Windows XP machine.

NEW QUESTION # 621

A technician is setting up a desktop computer in a small office. The user will need to access files on a drive shared from another desktop on the network. Which of the following configurations should the technician employ to achieve this goal?

- A. Enable a proxy server
- B. Grant the network administrator role to the user
- **C. Configure the network as private**
- D. Create a shortcut to public documents

Answer: C

Explanation:

Explanation

The technician should configure the network as private to allow the user to access files on a drive shared from another desktop on the network.

NEW QUESTION # 622

A technician needs to ensure that USB devices are not suspended by the operating system. Which of the following Control Panel utilities should the technician use to configure the setting?

- A. System
- B. Devices and Printers
- C. Ease of Access
- **D. Power Options**

Answer: D

Explanation:

Explanation

Power Options is a Control Panel utility that allows users to configure the power settings of their computer, such as when to turn off the display, when to put the computer to sleep, and how to manage the battery life.

Power Options also allows users to configure the USB selective suspend setting, which is a feature that automatically suspends the

power supply to USB devices that are not in use, in order to save energy. A user can disable this setting if they want to ensure that USB devices are not suspended by the operating system.

System, Devices and Printers, and Ease of Access are not Control Panel utilities that can be used to configure the USB selective suspend setting.

NEW QUESTION # 623

A technician is installing an operating system on a new computer. Which of the following is the first step of the process?

- A. Entering the product key
- B. Formatting the hard drive
- C. Selecting the filesystem
- **D. Setting the boot order**

Answer: D

Explanation:

Detailed

The first step in installing an operating system on a new computer is Setting the boot order (Option A). This ensures that the computer can boot from the installation media (USB, DVD, etc.). Once the boot order is configured, the system can start from the installation source, and the rest of the OS installation process can proceed.

Formatting the hard drive (Option B) comes later in the process, after the installation media is booted.

Entering the product key (Option C) and Selecting the filesystem (Option D) are subsequent steps during the installation process.

CompTIA A+ Core 2 Reference:

1.9 - Perform OS installations and upgrades, including setting boot methods and boot order.

NEW QUESTION # 624

A user reports that a PC seems to be running more slowly than usual. A technician checks system resources, but disk, CPU, and memory usage seem to be fine. The technician sees that GPU temperature is extremely high. Which of the following types of malware is MOST likely to blame?

- A. Ransomware
- B. Boot sector virus
- **C. Cryptominer**
- D. Spyware

Answer: C

Explanation:

Explanation

The type of malware that is most likely to blame for a PC running more slowly than usual and having an extremely high GPU temperature is a "cryptominer". Cryptominers are a type of malware that use the resources of a computer to mine cryptocurrency. This can cause the computer to run more slowly than usual and can cause the GPU temperature to rise. Spyware is a type of malware that is used to spy on a user's activities, but it does not typically cause high GPU temperatures. Ransomware is a type of malware that encrypts a user's files and demands payment to unlock them, but it does not typically cause high GPU temperatures. Boot sector viruses are a type of malware that infects the boot sector of a hard drive, but they do not typically cause high GPU temperatures.

NEW QUESTION # 625

.....
