Trusted CompTIA 220-1201 Exam Resource, New 220-1201 Exam Test

Our products boost 3 versions and varied functions. The 3 versions include the PDF version, PC version, APP online version. You can use the version you like and which suits you most to learn our 220-1201 study materials. The 3 versions support different equipment and using method and boost their own merits and functions. For example, the PC version supports the computers with Window system and can stimulate the real exam. Our products also boost multiple functions which including the self-learning, self-evaluation, statistics report, timing and stimulation functions. Each function provides their own benefits to help the clients learn the 220-1201 Study Materials efficiently. For instance, the self-learning and self-evaluation functions can help the clients check their results of learning the 220-1201 study materials.

CompTIA A+ Certification Exam: Core 1 Sample Questions (Q16-Q21):

NEW QUESTION # 16

Which of the following minimizes the time it takes to connect a display, keyboard, mouse, and network cable to a laptop?

- A. Lightning interface
- B. USB hub
- C. Bluetooth
- D. Port replicator

Answer: D

Explanation:

A port replicator is designed to allow a user to quickly connect a laptop to multiple peripherals (display, keyboard, mouse, network, etc.) using a single interface, reducing setup time.

From CompTIA A+ 220-1101 Official Study Guide, Objective 3.1 - Laptop hardware and connections:

"Port replicators offer quick connections for multiple peripherals, streamlining the process of docking and undocking a laptop."

Verified Source:

* CompTIA A+ Core 1 (220-1101) Official Study Guide, Chapter 3: Laptop Hardware

* CompTIA Exam Objectives 220-1101, Domain 3.1

NEW QUESTION # 17

A user is having issues when charging a device with a Lightning cable. The cable is not recognized when it is plugged into the device. This issue is usually resolved by flipping the cable over. This issue does not occur with other devices of the same type. Which of the following would most likely cause the issue?

- A. The charging port is dirty or damaged
- B. The cable is failing and needs to be replaced
- C. The device needs to be restarted.
- D. The battery may be swelling and needs inspection.

Answer: A

Explanation:

If flipping the cable helps but the problem is isolated to this device (not others of the same type), the most likely cause is a dirty or damaged charging port on the device itself. Dirt or debris inside the port can prevent a good electrical connection, causing the cable to work intermittently.

1.6: Troubleshoot common mobile device issues.

NEW QUESTION # 18

Which of the following is a Bluetooth network an example of?

- A. SAN
- B. PAN
- C. LAN
- D. WAN

Answer: B

Explanation:

Bluetooth is a wireless technology designed for short-range communication between devices. It is a classic example of a Personal Area Network (PAN), which supports communication between devices like smartphones, headsets, keyboards, and mice within a few meters. PANs are smaller in scope compared to LANs or WANs.

Reference: "CompTIA A+ Complete Study Guide" by Quentin Docter - Chapter 5, "Networking Fundamentals", page 275.

NEW QUESTION # 19

A customer is able to print most documents with their USB inkjet printer, but the system is unresponsive when printing a certain report from a custom application. Nothing will print until the computer is restarted and the printer is power cycled. A technician remotes into the PC and confirms that the spooler stops working when this report is sent. After cleaning the spooler and reinstalling the drivers from the manufacturer's website, the issue persists. No other sites using the application report similar issues. Which of the following is most likely causing the issue?

- A. Personal preferences have changed and documents with graphics are now online-only
- B. The manufacturer is curating content before it reaches the device to preserve ink.
- C. The system is using the PostScript language instead of the PCL.
- D. The application has a bug that the developer needs to address.

Answer: D

Explanation:

If a print spooler crashes specifically with one application and no issue occurs on other systems, the most likely root cause is a bug within that specific application. Restarting the spooler and reinstalling drivers resolves system-wide or hardware-related issues-not app-specific failures. This indicates the application may be sending malformed print data.

Reference: "CompTIA A+ Certification All-in-One Exam Guide" by Mike Meyers - Chapter 26, page 1144.

NEW QUESTION # 20

A user's wireless headset shows a "connected" status when turned on, but the Bluetooth list on the user's phone shows that the headset is "not connected." Which of the following should the technician do?

- **A. Re-pair the devices.**
- B. Enter the PIN.
- C. Enable Bluetooth.
- D. Turn off Wi-Fi.

Answer: A

Explanation:

When a device shows as not connected even though it previously paired, the most effective action is to re-pair the devices. This resets the Bluetooth connection, clears any corruption in pairing profiles, and re-establishes communication.

Option A: Entering a PIN is only relevant during initial pairing and may not be prompted again.

Option B: Turning off Wi-Fi doesn't typically affect Bluetooth; they operate on similar frequencies but don't conflict this way in normal use.

Option D: If Bluetooth were disabled, the device wouldn't appear at all, not just show as "not connected." CompTIA A+ Core 1 Exam Objective Reference:

Objective 1.5: Given a scenario, connect and configure accessories and ports of mobile devices.

NEW QUESTION # 21

.....

All these features make the 220-1201 exam practice question the ideal study material for 220-1201 exam preparation and it is designed to assist you in CompTIA A+ Certification Exam: Core 1 (220-1201) practice test. We guarantee you that you will not find all these top-rated features anywhere. They are only available with 220-1201 exam questions format.
