It is well known that CompTIA certification plays a big part in the IT field and obtaining it means you have access to the big companies and recognized by the authority. But the reality is that the CV0-004 Braindumps torrents are very difficult and the pass rate of CV0-004 practice test is low. So choosing our exam training materials are very necessary to every candidate.

CompTIA Cloud+ (2024) Sample Questions (Q81-Q86):

NEW QUESTION # 81

A company implements a web farm with 100 servers behind an application load balancer. During scaling events, new web servers that are placed in service have not loaded all their modules, which causes some requests to the web farm to fail. Which of the following should the cloud engineer implement to address the scaling issue?

- A. Scheduled scaling
- **B. Instance warm-up**
- C. Event-based scaling
- D. Load balancer passthrough

Answer: B

Explanation:

Implementing an instance warm-up period can address the issue of new web servers not having all modules loaded during scaling events. This warm-up period allows new instances to fully initialize and start serving traffic only when they are ready, preventing failed requests.

NEW QUESTION # 82

A cloud administrator recently created three servers in the cloud. The goal was to create ACLs so the servers could not communicate with each other. The servers were configured with the following IP addresses:

	Server 1	Server 2	Server 3
IP address	172.16.12.7	172.16.12.14	172.16.13.4
Subnet mask	255.255.255.240	255.255.255.240	255.255.255.240
Default gateway	172.16.12.1	172.16.12.17	172.16.13.15

After implementing the ACLs, the administrator confirmed that some servers are still able to reach the other servers. Which of the following should the administrator change to prevent the servers from being on the same network?

- A. The IP address of Server 1 to 172.16.12.36
- B. The IP address of Server 2 to 172.16.12.18
- C. The IP address of Server 1 to 172.16.12.2
- **D. The IP address of Server 2 to 172.16.14.14**

Answer: D

Explanation:

- * The IP address of Server 1 to 172.16.12.36 (A): Changes the IP but remains within the same subnet range as Server 2.
- * The IP address of Server 1 to 172.16.12.2 (B): Also keeps Server 1 within the same subnet as Server 2.
- * The IP address of Server 2 to 172.16.12.18 (C): Falls within the next subnet range but does not isolate Server 2 completely.
- * The IP address of Server 2 to 172.16.14.14 (D): Moves Server 2 to a different subnet, preventing direct communication with Server 1 and Server 3.

NEW QUESTION # 83

A cloud engineer is reviewing a disaster recovery plan that includes the following requirements:

- * System state, files, and configurations must be backed up on a weekly basis.
- * The system state, file, and configuration backups must be tested annually.

Which of the following backup methods should the engineer implement for the first week the plan is executed?

- **A. Full**
- B. Snapshot
- C. Differential
- D. Incremental

Answer: A

Explanation:

A full backup method should be implemented for the first week the disaster recovery plan is executed. This will ensure that a complete copy of the system state, files, and configurations are backed up. Subsequent backups can be differential or incremental as per the plan. References: Backup methodologies, including the importance of full backups, are part of the data management strategies in cloud computing covered in the CompTIA Cloud+ certification.

NEW QUESTION # 84

A security analyst confirms a zero-day vulnerability was exploited by hackers who gained access to confidential customer data and installed ransomware on the server. Which of the following steps should the security analyst take? (Choose two.)

- **A. Contact the customers to inform them about the data breach.**
- B. Delete confidential data used on other servers that might be compromised.
- C. Contact the hackers to negotiate payment to unlock the server.

- D. Send a global communication to inform all impacted users.
- **E. Inform the management and legal teams about the data breach**
- F. Modify the firewall rules to block the IP addresses and update the ports.

Answer: A,E

Explanation:

After a zero-day exploit resulting in a data breach and ransomware installation, it is critical to inform affected customers about the breach and the potential impact on their data. Additionally, the management and legal teams should be notified to handle the situation in compliance with regulatory requirements and to coordinate an appropriate response.

NEW QUESTION # 85

A system surpasses 75% to 80% of resource consumption. Which of the following scaling approaches is the most appropriate?

- A. Manual
- **B. Load**
- C. Trending
- D. Scheduled

Answer: B

Explanation:

Load scaling is the most appropriate approach when a system surpasses 75% to 80% of resource consumption.

This method involves adjusting resources dynamically in response to the current load, ensuring the system can handle increased demand without performance degradation. Load scaling can be automatic, allowing systems to scale up or down based on predefined metrics like CPU usage, memory, or network traffic, providing an efficient way to manage resources and maintain optimal performance. References: The CompTIA Cloud+ exam objectives include understanding cloud management and technical operations, which encompass knowledge of various scaling approaches, including load scaling, to ensure efficient resource utilization in cloud environments.
