CV0-004 Trustworthy Practice & CV0-004 Reliable Exam Book

Many students often feel that their own gains are not directly proportional to efforts in their process of learning. This is because they have not found the correct method of learning so that they often have low learning efficiency. If you have a similar situation, we suggest you try CV0-004 practice materials. CV0-004 test guide is compiled by experts of several industries tailored to CV0-004 exam to help students improve their learning efficiency and pass the exam in the shortest time. Experts conducted detailed analysis of important test sites according to the examination outline, and made appropriate omissions for unimportant test sites. At the same time, CV0-004 Exam Dump made a detailed description of all the incomprehensible knowledge points through examples, forms, etc., so that everyone can easily understand.

CompTIA Cloud+ (2024) Sample Questions (Q227-Q232):

NEW QUESTION # 227

Which of the following is the most cost-effective way to store data that is infrequently accessed?

- A. Off-site
- B. Hot site
- C. Cold site
- D. Warm site

Answer: A

Explanation:

The most cost-effective way to store data that is infrequently accessed is typically an off-site storage service, often referred to as

cold or archival storage. This type of storage is designed for data that is rarely accessed, providing lower storage costs. Reference: Data storage solutions and their cost implications, including off-site (cold or archival) storage for infrequently accessed data, are part of the cloud storage options discussed in CompTIA Cloud+.

NEW QUESTION # 228

A developer is sending requests to a SaaS application. The developer becomes unable to send more requests after sending a number of them, but other developers can still send requests. Which of the following is most likely causing the issue?

- A. API throttling
- B. Partial outage
- C. Service quota
- **D. Rate limiting**

Answer: D

Explanation:

* A. Partial outage: Would affect multiple developers, not just one.

* B. API throttling: Temporarily limits requests but doesn't block them entirely.

* C. Rate limiting: Prevents excessive requests from a single user or system, explaining why the developer was blocked after reaching a certain threshold.

* D. Service quota: Typically applies to overall service usage rather than individual user requests.

Reference: CompTIA Cloud+ CV0-004 Study Guide, Objective 2.6: Optimize resource usage and application access controls.

NEW QUESTION # 229

A company is required to save historical data for seven years. A cloud administrator implements a script that automatically deletes data older than seven years. Which of the following concepts best describes why the historical data is being deleted?

- A. Cost implications
- B. Data loss prevention
- **C. End of life**
- D. Tiered storage for archiving

Answer: C

Explanation:

Deleting historical data older than seven years as described is an example of data end of life (EOL) policies in action. These policies dictate when data is no longer needed or relevant and should be securely disposed of, often for compliance, legal, or cost-saving reasons.

NEW QUESTION # 230

Following a ransomware attack, the legal department at a company instructs the IT administrator to store the data from the affected virtual machines for a minimum of one year.

Which of the following is this an example of?

- A. Encryption
- B. Recoverability
- C. Integrity
- **D. Retention**

Answer: D

Explanation:

The instruction by the legal department to store data from the affected virtual machines for a minimum of one year is an example of data Retention. Retention policies are often driven by regulatory compliance requirements and dictate how long certain types of data must be kept before they can be securely disposed of.

NEW QUESTION # 231

Which of the following is a customer responsible for in a provider-managed database service? (Select two).

- A. Cluster configuration
- **B. Table-level permissions**
- C. Availability of hardware for scaling
- D. Minor database engine updates
- **E. Row-level encryption**
- F. Operating system patches

Answer: B,E

Explanation:

In a provider-managed database service, the cloud provider typically manages the infrastructure, operating system, and database engine updates. However, the customer is responsible for the data and its security within the database, which includes setting table-level permissions and row-level encryption to ensure that data access and security is managed appropriately.
