With Our Information-Packed PDF, Prepare for CompTIA SK0-005 Exam Questions

In order to meet the different needs of customers, we have created three versions of our SK0-005 guide questions. Of course, the content of the three versions is exactly the same, but the displays are the totally different, so you only need to consider which version of our SK0-005 study braindumps you prefer. Perhaps you can also consult our opinions if you don't know the difference of these three versions. Or you can free download the demos of the SK0-005 exam braindumps to check it out.

CompTIA Server+ Certification Exam Sample Questions (Q231-Q236):

NEW QUESTION # 231

An administrator is setting up a new server and has been asked to install an operating system that does not have a GUI because the server has limited resources. Which of the following installation options should the administrator use?

- A. Virtualized
- **B. Headless**
- C. Bare metal
- D. Slipstreamed

Answer: B

Explanation:

Explanation

A headless installation is an installation method that does not require a graphical user interface (GUI) or a monitor, keyboard, and mouse. It can be done remotely through a network connection or a command-line interface. A headless installation is suitable for a server that has limited resources and does not need a GUI.

Server Management: Server Hardware Installation and Management2, Module 2, Lesson 5

NEW QUESTION # 232

An administrator notices high traffic on a certain subnet and would like to identify the source of the traffic. Which of the following tools should the administrator utilize?

- A. Port scanner
- B. Anti-malware
- C. Nbtstat
- **D. Sniffer**

Answer: D

Explanation:

Application consistent backup is a method of backing up data that ensures the integrity and consistency of the application state. It involves notifying the application to flush its data from memory to disk and quiescing any write operations before taking a snapshot of the data. If the databases were not backed up to be application consistent, they might contain incomplete or corrupted data that cannot be restored properly.

Application-Consistent Backups3

NEW QUESTION # 233

A systems administrator deployed a new web proxy server onto the network. The proxy server has two interfaces: the first is connected to an internal corporate firewall, and the second is connected to an internet-facing firewall. Many users at the company are reporting they are unable to access the Internet since the new proxy was introduced. Analyze the network diagram and the proxy server's host routing table to resolve the Internet connectivity issues.

INSTRUCTIONS

Perform the following steps:

1. Click on the proxy server to display its routing table.
2. Modify the appropriate route entries to resolve the Internet connectivity issue.

If at any time you would like to bring back the initial state of the simulation, please click the Reset All button.

Proxy Server Routing Table
