CompTIA Server+ Certification Exam Sample Questions (Q191-Q196):

NEW QUESTION # 191

Alter rack mounting a server, a technician must install four network cables and two power cables for the server. Which of the

following is the MOST appropriate way to complete this task?

- A. Use the longest cables possible to allow for adjustment of the server rail within the rack.
- B. Wire the four network cables and the two power cables through the cable management arm using appropriate-length cables.
- C. Run the four network cables up the left side of the rack to the top of the rack switch. Run the two power cables down the right side of the rack toward the UPS.
- D. Install an Ethernet patch panel and a PDU to accommodate the network and power cables.

Answer: C

Explanation:

This is the most appropriate way to complete the task because it follows the best practices of cable management. Cable management is a process of organizing and securing cables in a rack or a server room to improve airflow, accessibility, safety, and aesthetics. Running the network cables up the left side and the power cables down the right side of the rack helps to avoid cable clutter, interference, and confusion. It also makes it easier to trace and troubleshoot cables if needed. Using appropriate-length cables also helps to reduce cable slack and excess. Wiring the cables through the cable management arm may cause stress and damage to the cables when moving the server in or out of the rack. Using the longest cables possible may create cable loops and tangles that can block airflow and increase fire hazards. Installing an Ethernet patch panel and a PDU (Power Distribution Unit) may be useful for accommodating more network and power cables, but not necessary for a single server. References:

NEW QUESTION # 193

Hosting data in different regional locations but not moving it for long periods of time describes:

- A. data at rest.
- B. on-site retention.
- C. off-site storage.
- D. a cold site.

Answer: A

Explanation:

Explanation

Data at rest refers to data that is stored in a persistent state on any device or media, such as hard drives, tapes, or cloud storage.

Data at rest does not move for long periods of time unless it is accessed or modified by authorized users or applications. A cold site (A) is a backup location that has minimal or no equipment and resources to resume business operations in case of a disaster. On-site retention is a policy of keeping backup data on premises for a certain period of time before transferring it to an off-site location. Off-site storage (D) is a method of storing backup data in a remote location that is physically or logically separated from the primary site.

NEW QUESTION # 194

A Linux server requires repetitive tasks for reconfiguration. Which of the following would be the best scripting language to use?

- A. Batch command file
- **B. Bash**
- C. PowerShell
- D. Visual Basic

Answer: B

Explanation:

Bash is a scripting language that is commonly used in Linux systems to automate tasks and manipulate text. Bash scripts can run commands, variables, functions, loops, and conditional statements. PowerShell is a scripting language that is mainly used in Windows systems, while batch command files are simple text files that contain a series of commands to be executed by the command-line interpreter. Visual Basic is a programming language that is used to create applications, not scripts. NEW QUESTION # 195

An administrator discovers a Bash script file has the following permissions set in octal notation;

777

Which of the following is the MOST appropriate command to ensure only the root user can modify and execute the script?

- A. `chmod g-rwx`
- B. `chmod u+wx`
- C. `chmod u=rwx`
- **D. `chmod go-rw>:`**

Answer: D

Explanation:

`chmod` is a command-line tool that changes the permissions of files and directories in Linux and Unix systems. `chmod go-rwx` means to remove read, write, and execute permissions for group and other users from a file or directory. This can ensure only the root user can modify and execute the script, since root user has full access to all files and directories regardless of their permissions.
