

Confluent CCAAK New Dumps Sheet - New CCAAK Exam Review

As the saying goes, to sensible men, every day is a day of reckoning. Time is very important to people. People often complain that they are wasting their time on study and work. They do not have time to look at the outside world. Now, CCAAK exam guide gives you this opportunity. CCAAK test prep helps you save time by improving your learning efficiency. They can provide remote online help whenever you need. And after-sales service staff will help you to solve all the questions arising after you purchase CCAAK learning question, any time you have any questions you can send an e-mail to consult them. All the help provided by CCAAK test prep is free. It is our happiest thing to solve the problem for you. Please feel free to contact us if you have any problems.

It is the best choice to accelerate your career by getting qualified by CCAAK certification. ITPassLeader provides the most updated and accurate CCAAK study pdf for clearing your actual test. The quality of CCAAK practice training torrent is checked by our professional experts. The high pass rate and high hit rate of Confluent pdf vce can ensure you 100% pass in the first attempt. What's more, if you fail the CCAAK test unfortunately, we will give you full refund without any hesitation.

New CCAAK Exam Review & CCAAK Training Online

The web-based Confluent CCAAK Practice Exam is compatible with all operating systems, including Mac, Linux, iOS, Android, and Windows. It is a browser-based Confluent Certified Administrator for Apache Kafka (CCAANK) practice exam that works on all major browsers, including Chrome, Firefox, Safari, Internet Explorer, and Opera. This means that you won't have to worry about installing any complicated software or plug-ins.

Confluent CCAAK Exam Syllabus Topics:

Topic	Details
Topic 1	Kafka Connect: This section of the exam measures skills of a Site Reliability Engineer and addresses the use and management of Kafka Connect for data integration. It includes setting up connectors, managing configurations, and ensuring efficient movement of data between Kafka and external systems.

Topic 2	• Troubleshooting: This section of the exam measures skills of a Kafka Administrator and includes diagnosing common issues in Kafka clusters. It covers problem areas such as performance bottlenecks, message delivery failures, replication issues, and consumer lag, along with techniques to resolve them effectively.
Topic 3	• Observability: This section of the exam measures skills of a Site Reliability Engineer and focuses on monitoring Kafka clusters. It assesses knowledge of metrics, logging, and alerting tools, including how to use them to maintain cluster health and performance visibility.
Topic 4	• Deployment Architecture: This section of the exam measures skills of a Kafka Administrator and covers different Kafka deployment topologies. It evaluates understanding of high availability, disaster recovery, multi-data center replication, and the roles of Zookeeper or KRaft in the cluster architecture.
Topic 5	• Apache Kafka® Security: This section of the exam measures skills of a Site Reliability Engineer and focuses on securing Kafka environments. It includes authentication mechanisms such as TLS and SASL, authorization using ACLs, and encrypting data at rest and in transit to ensure secure communication and access control.
Topic 6	• Apache Kafka® Cluster Configuration: This section of the exam measures skills of a Kafka Administrator and includes configuring broker properties, tuning for performance, managing topic-level settings, and applying best practices for production-grade environments.

Confluent Certified Administrator for Apache Kafka Sample Questions (Q30-Q35):

NEW QUESTION # 30

An employee in the reporting department needs assistance because their data feed is slowing down. You start by quickly checking the consumer lag for the clients on the data stream.

Which command will allow you to quickly check for lag on the consumers?

- A. `bin/kafka-consumer-groups.sh`
- B. `bin/kafka-reassign-partitions.sh`
- C. `bin/kafka-consumer-group-throughput.sh`
- D. `bin/kafka-consumer-lag.sh`

Answer: A

Explanation:

The `kafka-consumer-groups.sh` script is used to inspect consumer group details, including consumer lag, which indicates how far behind a consumer is from the latest data in the partition.

The typical usage is `bin/kafka-consumer-groups.sh --bootstrap-server <broker> --describe --group <group_id>`

NEW QUESTION # 31

If a broker's JVM garbage collection takes too long, what can occur?

- A. Log files written to disk are loaded into the page cache.
- B. There will be a trigger of the broker's log cleaner thread.
- C. There is backpressure to, and pausing of, Kafka clients.
- D. ZooKeeper believes the broker to be dead.

Answer: D

Explanation:

If the broker's JVM garbage collection (GC) pause is too long, it may fail to send heartbeats to ZooKeeper within the expected interval. As a result, ZooKeeper considers the broker dead, and the broker may be removed from the cluster, triggering leader elections and partition reassignments.

NEW QUESTION # 32

How can authentication for both internal component traffic and external client traffic be accomplished?

- A. Configure multiple security protocols on the same listener.
- B. Configure LoadBalancer.
- C. Configure multiple brokers.
- **D. Configure multiple listeners on the broker.**

Answer: D

Explanation:

Kafka supports multiple listeners, each with its own port, hostname, and security protocol. This allows you to:

- * Use one listener for internal communication (e.g., brokers, ZooKeeper, Connect, etc.) with one type of authentication (e.g., PLAINTEXT or SASL).
- * Use a separate listener for external clients (e.g., producers and consumers) with a different protocol (e.g., SSL or SASL_SSL).

NEW QUESTION # 33

Which secure communication is supported between the REST proxy and REST clients?

- A. SCRAM
- B. Kerberos
- **C. TLS (HTTPS)**
- D. MD5

Answer: C

NEW QUESTION # 34

When using Kafka ACLs, when is the resource authorization checked?

- **A. Each time the resource is accessed.**
- B. Each time the resource is accessed within the configured authorization interval.
- C. The initial time the resource is accessed.
- D. When the client connection is first established.

Answer: A

Explanation:

Kafka ACLs (Access Control Lists) perform authorization checks every time a client attempts to access a resource (e.g., topic, consumer group). This ensures continuous enforcement of permissions, not just at connection time or intervals. This approach provides fine-grained security, preventing unauthorized actions at any time during a session.

NEW QUESTION # 35

.....

The emerging Confluent field creates a space for Confluent Certified Administrator for Apache Kafka (CCAAB) certification exam holders to accelerate their careers. Many unfortunate candidates don't get the Confluent Certified Administrator for Apache Kafka (CCAAB) certification because they prepare for its Confluent Certified Administrator for Apache Kafka (CCAAB) exam questions from an Confluent CCAAB exam that dumps outdated material. It results in a waste of time and money. You can develop your skills and join the list of experts by earning this Confluent Certified Administrator for Apache Kafka (CCAAB) certification exam
