100% Pass Quiz 2025 Marvelous SAP C_ACDET_2506 Downloadable PDF

The development of science and technology makes our life more comfortable and convenient, which also brings us more challenges. Many company requests candidates not only have work experiences, but also some professional certifications. Therefore it is necessary to get a professional C_ACDET_2506 Certification to pave the way for a better future. The C_ACDET_2506 question dumps produced by our company, is helpful for our customers to pass their exams and get the C_ACDET_2506 certification within

several days. Our C_ACDET_2506 exam questions are your best choice.

SAP Certified Associate - Configuring SAP Ariba Strategic Sourcing Suite Sample Questions (Q36-Q41):

NEW QUESTION # 36

Which of the following data elements must be manually loaded into the Production environment after full configuration migration is completed using the Intelligent Configuration Manager (ICM)? (Select 2 correct answers)

- A. Relation and Relation Entries
- B. Enumerations
- C. User to Group Mapping
- D. Units of Measure

Answer: A,B

Explanation:

After migrating configurations using ICM, Enumerations and Relation entries require manual loading into Production because they are not included in automatic migration bundles. Enumerations provide picklist values, while Relations define dependencies between fields. Units of Measure are typically part of standard configuration or migrated automatically. User to Group Mapping is managed separately through provisioning or identity management tools, not via ICM. Manual loading of these data elements ensures data integrity and avoids missing references.

NEW QUESTION # 37

A customer requests a dynamic list from CSV. Which field type supports that?

- A. Single-Select Enum
- B. Computed Field
- C. Hyperlink
- D. Flex Master Data-based field

Answer: D

Explanation:

The Flex Master Data (FMD)-based field type supports dynamic lists sourced from CSV uploads. FMD fields act like advanced picklists that can contain thousands of values, imported via CSV templates defining the master data structure and entries. These fields are searchable, scalable, and ideal for large or frequently changing datasets.

Single-select enumerations are static lists manually defined and cannot import large CSV datasets. Computed fields calculate values dynamically based on expressions and are not designed for listing selectable values.

Hyperlink fields store URLs, unrelated to selection lists.

FMD fields are the preferred approach when a customer requires large or frequently updated lookup lists in sourcing projects or contracts.

NEW QUESTION # 38

When you have created a new custom field and marked it as reportable, saved and published your changes, but the field does not show up in reports. How can you resolve the issue?

- A. Run the "Retrieve flexible fields metadata for reporting" task under Reporting Manager.
- B. Custom fields must be created in the same module where reports are generated.
- C. You did not assign the custom field to the appropriate report category.
- D. Wait 2 hours for the schema to refresh automatically.

Answer: A

Explanation:

After publishing a custom reportable field, the "Retrieve flexible fields metadata for reporting" task must be run to update the reporting schema with the new field metadata. Without this manual step, the reports do not recognize the new field despite it being published. The system does not perform automatic timed refreshes of the schema. Module location or report category assignment is not a prerequisite for report visibility in SAP Ariba's analytics.

NEW QUESTION # 39

What system is provided by SAP Free of charge and provides an outline of how to deploy SAP Ariba solutions with a task list and project management format?

- A. SAP Ariba Enablement Workbook
- B. SAP Cloud Project Studio
- C. SAP Cloud Application Lifecycle Management
- D. SAP for Me

Answer: A

NEW QUESTION # 40

You are performing a Brownfield migration for a customer with live transactions in their SAP Ariba Production environment. The customer plans to introduce new required fields for contract workspaces that are associated with flex master data templates and enumeration lists. Based on the correct Brownfield process, what is the correct sequence of activities to avoid system errors or user disruption?

- A. Migrate flex master data templates and data # Load enumerations # Load translations # Deploy field change package in Production
- B. Deploy field change package in Production # Load translations # Load enumerations # Migrate flex master data templates and data
- C. Load enumerations # Load translations # Deploy field change package in Production # Migrate flex master data templates and data
- D. Deploy field change package in Production # Migrate flex master data templates and data # Load enumerations # Load translations

Answer: A

Explanation:

For Brownfield deployments with live transactions, the correct sequence is to first migrate Flex Master Data templates and data, then load enumerations, followed by loading translations, and finally deploy the field change package. This sequence ensures that all master data dependencies are in place before deploying configurations that rely on them, preventing system errors and broken references. Deploying field changes before data and enumerations are ready can cause failures and disrupt user operations. SAP Ariba's documented migration best practices emphasize this order for successful Brownfield projects.

NEW QUESTION # 41
